In stems with ligatures in 1<sup>st</sup> syllable and 2<sup>nd</sup> rounded vowel in 2<sup>nd</sup> syllable romanize the same as rounded vowel of 2<sup>nd</sup> syllable. For example: Romanize back vocalic  as bo as in

 boḡoni

### Other rules of application

1. Capitalization: Follow the rules for the capitalization of English.
2. There are many variant forms of letters, especially in manuscript.
3. Final forms of some letters may also be found with ᠨ appended to the "Final" forms above. Treat them as equivalent.

Not all special letters used for transcribing Tibetan and Sanskrit are listed here, only the most commonly used ones. Use the Mongolian Script Romanization Table's Transcription of Galig Letters for the Tod/Oirat/Old Kalmyk equivalents of the Mongolian script letters. The authoritative source for these forms (with Mongolian script and Tod/Oirat/Old Kalmyk script equivalents) is: Бобровниковъ, А. *Грамматика монгольско-калмыцкаго языка*. Казань, 1849 (see especially p. 375-400). Incomplete lists are found in a number of publications. A table of these forms including Sanskrit, Tibetan, Mongolian script and Tod /Oirat script equivalents may

be found in: Шагдарсүрэн, Ц. *Монголчуудын үсэг бичгийн товчоон*. Улаанбаатар, 2001, р. 233-239.
