### AACR2

- If it is either RDA or AACR2, what characteristics identify it as RDA or AACR2?

An ongoing conference cataloged as a monograph; indication of a number, date, and place is indicated; AACR2 would not include this information in the 1xx of the authority record, but catalogers would add it to the access point in the bibliographic record.

- Is this an RDA authority record, an AACR2 authority record, or could it be either one?

Trick question—the 1xx could be either AACR2 or RDA, but if you are observant, you probably noticed the 710 reference, which confirms that the authority record is AACR2. The 710 is the RDA form of the name; these RDA forms were added to AACR2 authority records during the US RDA Test in late 2010. If that 710 were not in the record, the record could be either AACR2 or RDA

- If it is either RDA or AACR2, what characteristics identify it as RDA or AACR2?

The 710 makes it an AACR2 record.

### AACR2

- If it is either RDA or AACR2, what characteristics identify it as RDA or AACR2?

Compare this one with #2 above. It has to be AACR2 because the conference is cataloged as a monograph; indication of a number, date, and place is indicated; AACR2 would not include this information in the 1xx of the authority record, but catalogers would add it to the access point in the bibliographic record. The RDA preferred form of the name would be the same—those same subordination rules from AACR2 are included in RDA (RDA 11.2.2.14). This is a TYPE 6 subordinate entry under both codes.

- Is this an RDA authority record, an AACR2 authority record, or could it be either one?

Could be either RDA or AACR2!

- If it is either RDA or AACR2, what characteristics identify it as RDA or AACR2?

The only form of name available to create the preferred name and to construct the authorized access point or heading includes the abbreviation “Dept.” This is different from the case where an AACR2 cataloger would automatically abbreviate the word “Department” if it were presented that way. Under the principle of representation, you take what you see, so this could be either RDA or AACR2.

- If it is an RDA record, which RDA instruction(s) support(s) the authorized access point?

Provisional coding is used for both AACR2 records and RDA records (see RDA 8.10.1.3) when the body cannot be fully established in the necessary language.
