

CONSER Standard Record (CSR) RDA Metadata Application Profile

January 21, 2020 revision

Introduction

The CONSER Standard Record (CSR) is a combination of RDA “Core,” RDA “Core if,” “PCC Core,” and “PCC Recommended” elements applicable to textual serials in various formats. Specific instructions have been included where appropriate for describing rare serials. Instructions in the CSR should be read in conjunction with the LC-PCC Policy Statements (LC-PCC PSs) that are integrated into the [RDA Toolkit](#). When describing online resources, catalogers should also consult the [PCC RDA Provider-Neutral guidelines](#). Modules of the [CONSER Cataloging Manual \(CCM\)](#) should be consulted for specialized formats such as Module 30 for direct access computer file serials, Module 31 for online serials, Module 32 for microform serials, Module 33 for newspapers, Module 34 for legal serials, and Module 35 for integrating resources.

When describing monographic resources, catalogers should consult the [BIBCO Standard Record \(BSR\) RDA Metadata Application Profile](#).

The CSR follows [RDA 0.6.4](#) in its approach to the concept of core: “As a minimum, a resource description for a work, expression, manifestation, or item should include all the core elements that are applicable and readily ascertainable.” The “PCC Recommended” elements are *not* core; their inclusion is encouraged but discretionary. Additional instructions are included that reflect CONSER agreement on recording certain RDA core elements.

The CSR is a model for serial descriptive records using a single encoding level (Ldr/17=‘blank’) in a shared database environment. Catalogers satisfy CSR requirements when creating and/or modifying bibliographic records, and determine the level of fullness that best suits the resources in their collections and the needs of their users. The CSR establishes a baseline set of elements that emphasize access points over descriptive data. The standard seeks to ensure inclusion of the essential data elements necessary to meet user needs; it is a solid “floor” description of a resource that can be built upon in a shared environment. The standard also does not preclude the use of any data in a bibliographic description representing more extensive cataloging treatment.

Authority records must support authorized access points in a CONSER record (coded Ldr/17=‘blank’). The mapping to MARC 21 fields included in the CSR is intended to be a general guide. For specific instructions on recording data in the MARC 21 format, please refer to official [MARC 21](#) documentation, [OCLC Bibliographic Formats and Standards](#), and appropriate modules of the CCM. CSR elements not directly related to RDA, or data treated in MARC 21 control/fixed fields, are included in a separate table at the end of this document.

Introduction

Catalogers not authenticating their records for CONSER may use the CSR for guidance but should also ensure that their records comply with any additional standards relevant to their particular situation where these vary from PCC requirements. In these records, some data required in CONSER records will not be appropriate and should not be included (e.g., 008/39="c" and 042="pcc").

Timeframe for implementation of the CSR RDA Metadata Application Profile

The RDA Metadata Application Profile for the CSR was initially released for use by the PCC community for CONSER-coded records on March 31, 2014. As of January 1, 2015, all newly-created CONSER records must follow the RDA Metadata Application Profile. Instructions for working with copy are found in [CONSER Guidelines for Working with Existing Copy](#). Modification of *Resource Description & Access* is an ongoing process as is the modification of RDA-related policies developed within the PCC. Therefore the guidelines and requirements within the CSR itself will evolve. Any comments or suggestions for improving the CSR should be submitted to conser@loc.gov

Explanation of symbols in the “RDA Instructions & Elements” column of the CSR table:

- An asterisk (“*”) identifies a general instruction not limited to a particular bibliographic element.
- A “T” in parentheses identifies a transcribed element per RDA instruction or per CONSER agreement in that instruction.
- A plus sign (“+”) identifies additional elements, beyond the RDA “Core” and RDA “Core if” elements, selected to be “PCC Core” elements for the CONSER program.
- An “R” in parentheses identifies additional elements that, while not core in RDA or the CSR, the PCC recommends and encourages catalogers include when the element may be useful to support user tasks (find, identify, select, and obtain).
- The absence of a plus sign (“+”) and an (R) means RDA already defines the element as core.

Instructions for rare materials:

The rare materials provisions in the CSR are closely aligned with the provisions of [Descriptive Cataloging of Rare Materials \(Serials\) \(DCRM\(S\)\)](#) and may be used with any serial resources deemed rare by the cataloging agency. This includes resources that may require additional details of description to permit the ready identification of copies (e.g., as editions, impressions, or issues) and provide more exact descriptions of them as artifacts. Typically, early resources (e.g., resources produced before the advent of mechanized printing and papermaking processes in the early 19th century) are most likely to require these additional details, but the CSR rare materials provisions may be used if necessary with resources from any period.

Introduction

As is the case with the general provisions of the CSR, the rare materials provisions represent a floor on which other elements can be built. They are not intended to reproduce or replace *DCRM(S)*, and elements in *DCRM(S)* not in the CSR can certainly be included in the record. The CSR rare materials provisions generally call for expanded treatment of elements within the CSR or deem certain RDA elements to be core that are not considered core for other types of materials. There is one case that calls for *different* treatment rather than simply expansion of the description. That is: 1.7.1 alternative 1, which invokes the option of using *DCRM(S)* as the designated published style manual in place of RDA 1.7.2-1.7.9 for transcribing. This was a case singled out by the rare community as an area where there was a valid rare materials reason for departing from the general guidelines.

It is intended that the rare materials provisions be usable with any format. However, one of the stipulations of applying the rare materials provisions is the recording of the “dcrms” code in 040 in addition to “rda” in order to label the record as following the CSR rare materials provisions.

Note on title +	2.17.2	Always make a note giving the source of title, even if it is the title page. Combine the note with a "Description based on" note (see 2.17.13). Encode the two notes in a single 588 field. Optional omission: Do not omit the note per LC-PCC PS for 2.17.2.3 .	588
Note on issue, part, or iteration used as basis for identification of resource +	2.17.13	Always provide a "Description based on" note even if first issue is in hand. Wording in RDA: "Identification of the resource based on: ... " is only an example. CONSER will continue to use "Description based on" wording. Always provide a "Latest issue consulted:" note even if last issue is in hand. Rare materials: <i>Transcribe</i> the numbering for the issue, part, or iteration used as the basis for identification in the same order as in the numbering area, and with the appropriate prescribed punctuation (see DCRM(S) 7B21.1, 7B21.2).	588
