G-210
Gravitation
— Definition
Gravitation, in physics, is the attractive force that exists between all physical objects. It is the effect that causes objects with mass to be attracted toward each other. The gravitational force between two objects is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers. This relationship is described by Newton's law of universal gravitation.

Gravitational force

The gravitational force between two objects of masses m1 and m2, separated by a distance r, is given by:

F = G * (m1 * m2) / r^2

where G is the gravitational constant.

Gravitational acceleration

The gravitational acceleration at a point in space is the acceleration of an object due to the force of gravity. On Earth, the gravitational acceleration, denoted as g, is approximately 9.81 m/s². The value of g varies slightly from place to place due to differences in the mass and distance from the center of the Earth.

Gravitational potential energy

The gravitational potential energy of an object of mass m located at a distance r from the center of a mass M is given by:

U = -G * M * m / r

This energy is the work done against gravity to move an object from infinity to a position r from the center of M.

Gravitational waves

Gravitational waves are ripples in the fabric of spacetime predicted by the general theory of relativity. They are produced by accelerating masses and are propagated as waves that travel through spacetime at the speed of light. The waves carry information about the source of the acceleration, such as the details of the merging of black holes or the collision of neutron stars.

Gravitational lensing

Gravitational lensing is a phenomenon in which the path of light from a distant object is bent by the gravity of a massive object lying on its line of sight. This effect can magnify, deflect, or even create multiple images of the distant object.

Gravitational collapse

Gravitational collapse occurs when a massive object becomes so compact that its gravitational pull becomes strong enough to prevent any light from escaping. This process is involved in the formation of black holes.

Gravity anomalies

Gravity anomalies are deviations from the expected value of gravity at a given location. These anomalies can be caused by the presence of large masses, such as mountains or oceanic layers, or by a lack of mass, like that found in ocean basins.

Gravity, Center of Mass

The center of mass of a system of objects is the point at which all the objects can be thought of as being located. The center of mass is a point that balances the system and is defined as the point at which the gravitational forces acting on each object are balanced.

Gravity, Gravitational

Gravitational force

The gravitational force is the force that any two objects with mass exert upon each other directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers.

Gravity, Local disturbance of

Gravity anomalies

Gravity anomalies are deviations from the expected value of gravity at a given location. These anomalies can be caused by the presence of large masses, such as mountains or oceanic layers, or by a lack of mass, like that found in ocean basins.

Gravity, Quantum

Quantum gravity

Quantum gravity is the field of study that seeks to reconcile general relativity with quantum mechanics. It aims to describe the behavior of gravity at the smallest scales, where quantum effects are expected to be significant.

Gravity, Space vehicles—Attitude control systems

Gravity assist

Gravity assist is a technique used in spaceflight to exploit the gravitational influence of a massive body, such as a planet, to alter the trajectory of a spacecraft, typically to save propellant.

Gravity, specific gravity

Specific gravity

Specific gravity is a measure of the density of a substance relative to the density of water. It is often used in the testing of materials to determine their density or to compare them to other substances.

Gravity, reduced gravity environments

Reduced gravity environments

Reduced gravity environments are settings in which the gravitational acceleration acting on an object is less than the acceleration due to gravity on Earth. These environments are often created by spacecraft or other artificial means for scientific research or training purposes.

Gravity, weightlessness

Weightlessness

Weightlessness is a state of zero effective gravity. In weightlessness, a person or object experiences no gravitational force, allowing them to float freely through space.

Gravity, weight (Physics)

Weight (Physics)

Weight (Physics) is the force exerted on an object due to gravity. It is calculated as the product of the object's mass and the acceleration due to gravity, typically measured as the acceleration of an object due to the Earth's gravity.

Gravity, Earth—Gravity

Gravity, Earth

Gravity on Earth is the gravitational force exerted by the Earth on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Earth. The acceleration of gravity at the Earth's surface is approximately 9.81 m/s².

Gravity, Moon—Gravity

Gravity, Moon

Gravity on the Moon is the gravitational force exerted by the Moon on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Moon. The acceleration of gravity on the Moon is approximately 1.62 m/s², which is about 1/6 of the acceleration of gravity on Earth.

Gravity, Mars (Planet)—Gravity

Gravity, Mars

Gravity on Mars is the gravitational force exerted by the planet Mars on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of Mars. The acceleration of gravity on Mars is approximately 3.71 m/s², which is about 3/4 of the acceleration of gravity on Earth.

Gravity, Sun—Gravity

Gravity, Sun

The gravitational force exerted by the Sun on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Sun. The acceleration of gravity on the Sun is approximately 274 m/s², which is significantly higher than on Earth.

Gravity, stars

Stars

Stars are massive, luminous objects composed of plasma held together by their own gravity. They are the source of energy for planets and other objects in the solar system. The gravitational force exerted by stars on all objects that have mass.

Gravity, specific gravity

Specific gravity

Specific gravity is a measure of the density of a substance relative to the density of water. It is often used in the testing of materials to determine their density or to compare them to other substances.

Gravity, specific gravity relations to measurement of the resultant effect of the gravitational attraction and centrifugal repulsion between any body and a planet or other celestial body, including works on earth's gravity are entered under the heading Gravity.

Gravity, centers of mass—Weighing

Gravity, reduced gravity environments

Reduced gravity environments are settings in which the gravitational acceleration acting on an object is less than the acceleration due to gravity on Earth. These environments are often created by spacecraft or other artificial means for scientific research or training purposes.

Gravity, weightlessness

Weightlessness

Weightlessness is a state of zero effective gravity. In weightlessness, a person or object experiences no gravitational force, allowing them to float freely through space.

Gravity, weight (Physics)

Weight (Physics)

Weight (Physics) is the force exerted on an object due to gravity. It is calculated as the product of the object's mass and the acceleration due to gravity, typically measured as the acceleration of an object due to the Earth's gravity.

Gravity, Earth—Gravity

Gravity on Earth is the gravitational force exerted by the Earth on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Earth. The acceleration of gravity at the Earth's surface is approximately 9.81 m/s².

Gravity, Moon—Gravity

Gravity, Moon

Gravity on the Moon is the gravitational force exerted by the Moon on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Moon. The acceleration of gravity on the Moon is approximately 1.62 m/s², which is about 1/6 of the acceleration of gravity on Earth.

Gravity, Mars (Planet)—Gravity

Gravity, Mars

Gravity on Mars is the gravitational force exerted by the planet Mars on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of Mars. The acceleration of gravity on Mars is approximately 3.71 m/s², which is about 3/4 of the acceleration of gravity on Earth.

Gravity, Sun—Gravity

Gravity, Sun

The gravitational force exerted by the Sun on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Sun. The acceleration of gravity on the Sun is approximately 274 m/s², which is significantly higher than on Earth.

Gravity, stars

Stars

Stars are massive, luminous objects composed of plasma held together by their own gravity. They are the source of energy for planets and other objects in the solar system. The gravitational force exerted by stars on all objects that have mass.

Gravity, specific gravity relations to measurement of the resultant effect of the gravitational attraction and centrifugal repulsion between any body and a planet or other celestial body, including works on earth's gravity are entered under the heading Gravity.

Gravity, centers of mass—Weighing

Gravity, reduced gravity environments

Reduced gravity environments are settings in which the gravitational acceleration acting on an object is less than the acceleration due to gravity on Earth. These environments are often created by spacecraft or other artificial means for scientific research or training purposes.

Gravity, weightlessness

Weightlessness

Weightlessness is a state of zero effective gravity. In weightlessness, a person or object experiences no gravitational force, allowing them to float freely through space.

Gravity, weight (Physics)

Weight (Physics)

Weight (Physics) is the force exerted on an object due to gravity. It is calculated as the product of the object's mass and the acceleration due to gravity, typically measured as the acceleration of an object due to the Earth's gravity.

Gravity, Earth—Gravity

Gravity on Earth is the gravitational force exerted by the Earth on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Earth. The acceleration of gravity at the Earth's surface is approximately 9.81 m/s².

Gravity, Moon—Gravity

Gravity, Moon

Gravity on the Moon is the gravitational force exerted by the Moon on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Moon. The acceleration of gravity on the Moon is approximately 1.62 m/s², which is about 1/6 of the acceleration of gravity on Earth.

Gravity, Mars (Planet)—Gravity

Gravity, Mars

Gravity on Mars is the gravitational force exerted by the planet Mars on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of Mars. The acceleration of gravity on Mars is approximately 3.71 m/s², which is about 3/4 of the acceleration of gravity on Earth.

Gravity, Sun—Gravity

Gravity, Sun

The gravitational force exerted by the Sun on all objects that have mass. The gravitational force on an object is proportional to its mass and acts toward the center of the Sun. The acceleration of gravity on the Sun is approximately 274 m/s², which is significantly higher than on Earth.

Gravity, stars

Stars

Stars are massive, luminous objects composed of plasma held together by their own gravity. They are the source of energy for planets and other objects in the solar system. The gravitational force exerted by stars on all objects that have mass.

Groeneveld family

**Groenlandic language**

Groenlandic is a language spoken in Greenland, which has a close relationship with the Faroese language.

**Groenlandic language family**

Groenlandic belongs to the Uralic language family, specifically the Finnish-Ugric branch.

**Groenlandic language varieties**

There are two main varieties of Groenlandic: Greenlandic (Kalaallisut) and East Greenlandic (Kalaallit). Both varieties are spoken in Greenland.

**Groenlandic language status**

Groenlandic is spoken by approximately 57,000 people in Greenland, making it the official language of the country.

**Groenlandic language literature**

Groenlandic literature includes works such as poems, novels, and scripts for Greenlandic television and radio programs.

**Groenlandic language history**

The development of Groenlandic dates back to the 15th century, when the first Danes arrived in Greenland. The language was influenced by Old Norse and later by Danish and English, leading to the development of the current form of Groenlandic.

**Groenlandic language future**

Efforts are underway to maintain and promote the use of Groenlandic, including education programs and language revitalization projects.
