1 Introduction: Scope of the Romanization Table

Romanization is one type of transliteration. Transliteration is the process of converting text written in one script into another script. Romanization in this ALA-LC Romanization Table (RT) means converting Japanese script to the Roman alphabet used in Western European languages.

Romanized text in catalog records is intended to mirror as closely as possible the original Japanese script and its readings, but the romanization process is not exact. While the original Japanese text is recorded directly from bibliographic materials based on cataloging rules, romanized text is created by applying the guidelines in the RT (this document). The RT is a romanization scheme that strives to foster consistency and uniformity in the romanized text used in catalog records. The RT is not a pronunciation guide, although pronunciation is an important consideration in the romanization process. Since the pronunciation of Japanese script can change over time, place, and context, there is not always a clear one-to-one relationship between Japanese script and Romanized text. In such cases, textual context must be considered carefully. Even though the RT aims for uniformity, catalogers should keep in mind that there are many gray areas in the romanization process. **In cases of doubt, consider adding cross-references.**

2 Basic Principles for Romanization

2.1 How to Romanize

Romanization for library catalogs has two main components: converting Japanese text into the roman alphabet and word division. How to convert text (romanize) is covered primarily in sections 2-5 and 7 of this romanization table. Word division is covered in section 6. These two components must always be considered carefully. The RT provides guidance and many examples drawn from actual cases.

Specific guidance may also be found in the Romanized/Kana Equivalent Charts, following the RT on page . In general, words and parts of words written only in hiragana or katakana should be romanized as they appear. If a specific reading is indicated in the text of materials being cataloged, use that. When in doubt, use standard Japanese dictionaries (see Helpful References) to determine the current modern reading, as far as possible.

2.2 Preferred Reading Sources

If multiple readings exist for text appearing on items, use the reading that is preferred in most dictionaries, except if another reading is provided on the item.

- **Text on item:** 私
  Romanization: watakushi
  Suggested cross-reference: watashi

- **Text on item:** 大地震
  Romanization: daijishin
  Suggested cross-reference: ōjishin

- **Text on item:** 重複
  Romanization: chōfuku
  Suggested cross-reference: jōfuku

2.3 Preferred Reading: Exceptions

Page 1 Japanese Romanization Table
2.3.1 Grammatical Particles
Romanize は and へ when used as grammatical particles as "wa" and "e".

2.3.2 Historical Kana Usage (歴史的仮名遣い | rekishiteki kanazukai)
Use modern readings unless a specific reading is assigned on the piece. The direct
kana-by-kana reading may be added as a cross-reference.
- Text on item (Historic usage): てふてふ
  Modern usage: ちょうちょう
  Romanization: chōchō
  Suggested Cross-reference: tefutefu

- Text on item (Historic usage): ぬゑのたんじょう
  Modern usage: ぬえのたんじょう
  Romanization: Nue no tanjo
  Suggested Cross-reference: Nue no tanjiyau

- Text on item (Historic usage): おもひでぽろぽろ
  Modern usage: おもいでぽろぽろ
  Romanization: Omoide poroporo
  Suggested Cross-reference: Omohide poroporo

2.4 Preferred Reading: Complex Cases
2.4.1 Well-Established Reading of Proper Names
If a particular non-standard reading is commonly found in websites, reference sources or
other publications associated with the entity, use that.
- Text on item: 本朝書籍目録 (book title)
  Romanization: Honcho shojaku mokuroku
  Suggested cross-reference: Honcho shoseki mokuroku

- Text on item: 圖書寮 (or 図書寮)

  Suggested cross-reference: Toshoryo

- Text on item: 大日本帝国
  Romanization: Dai Nippon Teikoku
  Suggested cross-reference: Dai Nihon Teikoku

- Text on item: 日本永代蔵
  Romanization: Nippon eitaigura
  Suggested cross-reference: Nihon eitaigura

2.4.2 Foreign Words
2.4.2.1 Foreign Words Written in Kana (外来語 | gairaigo)
Romanize kana-by-kana. Alternative reading(s) may be added as cross-reference(s).
2.4.2.2 Foreign Words Written in Kanji
For foreign words originally in Chinese characters or transliterated using kanji, follow 2.2 and 2.4.1 and use preferred sources to identify their readings unless a specific reading is indicated on the item. Alternative reading(s) may be added as cross-reference(s). See also 6.11.8.1.

香港 | Honkon
済州島 | Chejutō (Suggested cross-reference: Chejudo,
Saishūtō)
紐育 | Nyū Yōku
加奈陀 | Kanada
亜米利加 | Amerika

2.4.3 Alternative Romanizations as Cross-references
Variant romanizations may be added as cross-references in bibliographic and authority records based on the cataloger’s judgment.

Text on Item: その後
Romanization: sonogo
Suggested Cross-reference: sono ato
Suggested Cross-reference: sono nochi
Suggested Cross-reference: sonoato
Suggested Cross-reference: sononochi

Text on Item: 行く年来る年
Romanization: yukutoshi kurutoshi
Suggested Cross-reference: ikutoshi kurutoshi
2.5 Long Vowels, Adjacent Vowels, and Exceptions

In Japanese text, several methods are used to indicate long vowels. See also 5.1.1.

2.5.1 Lengthening bar | ー | 長音符 | chōonpu

Vowels written with a lengthening bar are romanized with a macron.

- コンピュータ | konpyūta
- ニューヨーク | Nyū Yōku
- ケンタッキー | Kentakkī
- ウィーク | wīku
- ビードロ | bīdoro
- そーっと | sōtto

2.5.2 Romanized with a Macron: Syllables Ending with Final u

Long vowels ending in u are romanized with a macron.

- 孔子 | Kōshi, not Koushi
- 労働 | rõdō, not roudou
- 情報 | jōhō, not jouhou
- 昨秋 | sakushū, not sakushuu
- 流水 | ryūsui, not ryuusui
- お父さん | otōsan, not otousan
- トウサン | tōsan, not tousan

2.5.3 Romanized with a Macron: ā, ē and ō

The a, e and o long vowels are romanized with a macron.

- お母さん | okāsan, not okaasan
- ああ播磨灘 | Ā Harimanada, not Aa Harimanada
- バアサン | bāsan, not baasan
- お姉さん | onēsan, not oneesan
- 茂兵衞 Mohē, not Mohee
- ええじゃないか | ē ja nai ka, not ee ja nai ka
- 狼 | ōkami, not ookami
- オオカミ | ōkami, not ookami
- ほおずき | hōzuki, not hoozuki
- 遠い | tōi, not tooi

2.5.4 Long i Vowels

Long i vowels are always romanized as ii (double i), except when long i is written with a lengthening bar (ー). In that case, it is romanized with a macron (ī). See 2.5.1.

- 新潟 | Niigata, not Nīgata
- 飯田 | Īda, not Īda
- お兄さん | onīsan, not onīsan
- びいどろ | bīdoro, not bīdoro
- But: ビードロ | bīdoro, not biidoro
- 物言い | monoii, not monOi
ジイサン jiisan, not jīsan

2.5.5 Exception for Morpheme Boundaries
When adjacent vowels cross the boundary between two "meaningful units," called "morphemes," they are romanized as separate vowels, not long vowels. When in doubt about the boundary, for example with contracted readings, long-established customary readings of proper names, dialects, etc., follow 2.5.1-2.5.4.

2.5.5.1 Adjacent Vowels Separated by a Morpheme Boundary

| 子牛 | koushi (子ko + 牛ushi, not kōshi) |
| 長雨 | nagaame (長 naga + 雨ame, not nagāme) |
| 会社案 | kaishaan (会社 kaisha + 案an, not kaishān) |
| 本居 | Motoori (本 Moto + 居ori, not Motōri) |
| 腐れ縁 | kusareen (腐れ kusare + 縁 en, not kusarēn) |

2.5.5.2 Final う | u Verbs: Two Types

2.5.5.2.1 Morphemic: Modern Verbs
The added final う | u following another vowel in the "dictionary form" of verbs constitutes by itself a morpheme (a meaningful unit). It is therefore romanized as a separate letter from the preceding vowel, NOT as a long vowel.

| 縫う | nuu, not nū |
| 問う | tou, not tō |
| 思う | omou, not omō |

2.5.5.2.2 Not Morphemic: 候 | sōrō
In contrast, the added final う | う in 候 is NOT considered a separate meaningful unit (morpheme). Instead it combines with the preceding consonant and vowel to form a single morphemic syllable. This final vowel is therefore romanized as a long vowel.

候, 候ふ, そうろう | sōrō, not sourou

3.9.2 When Not to Capitalize
Do not capitalize a word derived from a proper name when it has acquired a new, distinct common noun meaning. Since formulating a prescriptive and all-inclusive rule for this in advance is not possible, catalogers should assess general and long-continued usage when making a determination.
呉服 | gofuku
瀬戸物 | setomono
アラビア数字 | arabia sūji
3.9.3 Special Cases Like 和, 漢, 洋, etc.
These characters are used in combination with other characters to form words that refer to "Japanese," "Chinese" and "Western" in English translation. 4 Japanese Punctuation and Typographical Marks
Japanese text includes various forms of punctuation and typographical marks. Use the rules and examples below as guidance when romanizing Japanese punctuation. If you encounter punctuation or a typographical mark that is not listed here, or if a simple conversion does not work, use your best judgement and provide cross references as needed.

4.1 Middle Dots | 中黒 | Nakaguro
Transcribe a middle dot (・) used for dividing words as a comma followed by a space if it makes the meaning of romanized words clear. Use only a space if a comma is not necessary for clarity.
For middle dots appearing between numbers, see 7.5.

4.2 Punctuation and Typographical Marks with Roman Equivalents
Use standard roman equivalents for Japanese punctuation with parallel forms used in European languages as noted below.
Order shown in examples below: English name | Japanese | For Romanization
comma | , | ,
period | 。 | ．
question mark | ？ | ?
exclamation point | ！ | !
tilde | ～ | - (used with numbers and dates, meaning から… | from …; or a hyphen between two dates, used for a date range)
4.3 Brackets and Parentheses
Various forms of brackets and parentheses are seen in Japanese publications, including those noted below.

- Angle brackets 〈〉  | < >
- Double angle brackets 《》  | < >
- Brackets [ ]  | [ ]
- Brackets 〚〛  | [ ]
- Parentheses ( )  | ( )

4.4 Typographical Marks With no Roman Equivalent

4.4.1 Repetition
The repetition markersゝ and々 indicate repetition of the previous syllable.
- 蝶々 | cho cho
- 日々 | hibi
- 年々 | nennen
- こゝろ | Kokoro

4.4.2 Geta [placeholder] | =
NOT USED IN CURRENT PRACTICE.
The Geta placeholder may be encountered in legacy cataloging. It was used when kanji on the piece was not available in the character set.

5 Diacritic Marks and Other Symbols Used in Romanization
Diacritic marks and other symbols in addition to the standard roman alphabet are used to romanize Japanese. See section 2.5 for special cases and exceptions.

5.1.1 Macron
Transcribe the macron (¯) over the letters a, i, u, e, and o to indicate a long vowel. For Examples, see 2.5.

5.1.2 Apostrophe
Transcribe the apostrophe (’) between syllables when the first syllable ends with the letter n and the following syllable begins with a vowel (a, i, u, e, o) or y. The apostrophe shows that the final n is part of the preceding syllable.

- 信越 | Shin’etsu
- 翻訳 | hon’yaku
- 万葉 | Man’yō
- 親愛なる | shin’ainaru

5.1.3 Breve for final tsu (促音 | sokuon)
A final tsu (促音 | sokuon) used in interjections or expressions of surprise is romanized using the breve (˘).
- あっ | ä
5.1.4 Acute for Long Vowels with Final tsu (促音 | sokuon)

All long vowels ending in final tsu (促音 | sokuon) used in interjections or expressions of surprise are romanized using the acute (´), except for the long i vowel when written with double いい (see below). In general, the acute is used when the original text uses either a double vowel or a lengthening bar followed by a final tsu. In these cases, first apply the guidelines in the long vowel section (see 2.5). Replace the macron with the acute as appropriate.

ああっ OR あーっ | á
いいっ | í
ううっ OR うーっ | ú
ええっ OR えーっ | é
おおっ OR おーっ | ó

But the long i vowel is romanized with two letters, i + ĭ, when the original text uses a double いい See 2.5.4.

いいっ | ií

With regular consonants:
やあっ OR やーっ | yá

Consonant + the long i vowel with lengthening bar:
ぎーっ | gí
Consonant + the doubled long i vowel:
みしいっ | mishiǐ

6 Word Division
6.1 What is a Word?

Unlike Japanese script, which has very little spacing, romanized Japanese text uses spaces between words. According to the Oxford English Dictionary, a word is "An element or unit of speech, language, etc." The OED goes on to explain that a word is: "Any of the sequences of one or more sounds or morphemes (intuitively recognized by native speakers as) constituting the basic units of meaningful speech used in forming a sentence or utterance in a language (and in most writing systems normally separated by spaces); a lexical unit other than a phrase or affix; an item of vocabulary..." Apply the word division rules with this OED definition and the following guidelines in mind.
6.1.1 Write Words Separately
In general, write words separately from each other. In cases of doubt, refer to the rules and instructions in this section to determine word boundaries. Add cross-references as needed.

6.8 Foreign Words Including Neologisms

6.8.1 General Rule
Expressions borrowed from other languages include both straight copies of foreign expressions, and neologisms or made-up words based on foreign words, but adapted in form and meaning when used in Japanese. Some borrowed expressions are divided into separate words in a straightforward way. In other cases, the boundary between words may not be so clear. Use your best judgement, and add cross references as necessary.

マスメディア | masu media (mass media)
アール・ヌーヴォー | Aˈru Nūvō (Art Nouveau)
アヴァンギャルド | avangyarudo (avant-garde)

ニューヨーク市長 | Nyū Yōkku shicho
グランドセントラル駅 | Gurando Sentoraru-eki

7 Numerals
The instructions below show how to write numeric characters in romanized text fields. For how to transcribe or record numeric characters in original script fields, consult the appropriate cataloging rules. In general when romanizing, East Asian numerals are converted to Arabic numerals for clarity. However, there are many exceptions to this. Notable exceptions are covered in 7.2.1 and 7.3, as well as "how-to" in 7.4. When in doubt, use your own judgement, and provide cross-references as needed.

7.1 Typical Cases
7.1.1 Arabic Numerals
Arabic numbers or digits are written as such. Write the ordinal prefix 第 | dai separately and hyphenate numbers joined to modify a common substantive or counters:

1 日3回 | 1-nichi 3-kai

4次元 | 4-jigen

Notes: i) When て and で are used as grammatical particles (post-positions), use wa and e, respectively, to account for reading changes.

ii) Double consonants (促音) are represented by a doubling of the corresponding consonant. (e.g. もみ、びに "momi, bito")

If a double consonant occurs with ch-, add t instead of doubling c. (e.g. もち chibi, to chito)
### Notes:

iii) If the large character-small character sequence is not found in this table, romanize as many characters as possible from the beginning using Table A and B, and write the rest as if added small characters were regular characters. (e.g. アィ ai, スェ sue, ヴィヤ via)
