Problem with Distribution of Bibliographic Records

A problem has been discovered in the distribution of bibliographic records in the MDS bibliographic products. On some days, the exports did not include all records that were eligible for distribution. This situation has existed since February 24, 2014, but does not occur each day. The records which failed to load are being identified and will be distributed as soon as possible. Customers who are looking for records for particular dates may notice this delay in distribution.

A short term solution will be in place soon to identify the problem records and move them to an error file for correction. This will enable complete normal distribution to be restored.

This problem does not affect authority records.

The following dates may have incomplete record loads:
March 14, 19, 20, 21, 22, 25, 26, 27, 28, 29, 30, and April 1, 2

Questions may be directed to:

Policy and Standards Division
