American
Archivists
Chicago

## Encoded Archival Description Tag Library Version EAD3 1.1.2, Edition 2023

This tag library represents version EAD3 1.1.2 of the Encoded Archival Description schemas, released in June 2023. It supersedes the Version EAD3 1.1.1 tag library published in 2019 and the 1.1.0 tag library published in 2018.

The SAA Technical Subcommittee for Encoded Archival Standards is responsible for updating and editing the EAD schemas and tag library. The Network Development and MARC Standards Office of the Library of Congress serves as the host for online EAD documentation, including storage and delivery of electronic files and maintenance of the EAD web site, located at http://www.loc.gov/ead/.

## Preface

Encoded Archival Description (EAD) is the international metadata transmission standard for hierarchical descriptions of archival records. Developed by the EAD Working Group of the Society of American Archivists and first published in 1998, EAD is an Extensible Markup Language (XML) format used by archivists around the globe. A second version with greater international alignment, EAD 2002, was released as a DTD in 2002 and in 2007 as Relax NG and W3C schemas. The development of EAD made it possible to create electronic finding aids within a specifically archival data structure compliant with General International Standard Archival Description (ISAD(G)). This innovation was a crucial impetus behind the swift migration of archival description to the internet, the acceptance of national archival descriptive content standards like Describing Archives: A Content Standard (DACS), and the emergence of a professional consensus that archival description existed to be shared widely and shared well.

This new version of Encoded Archival Description - EAD3 - exists thanks to the efforts and support of many people, but it exists because of the many archivists and repositories around the world that saw the utility of EAD, used it in diverse and inspiring ways, and continue to recognize many ways in which it might work better.

In the years between the release of EAD 2002 and 2010, when the revision process that led to EAD3 began, the technological landscape surrounding archival description evolved enormously. Collection management systems, such as the Archivists' Toolkit, Archon, and ICA-AtoM, offered the robust advantages of modelling descriptive information in relational databases, but exposed the difficulty of adapting the EAD document model in data-centric applications. Linked Open Data emerged as a viable methodology for creating a semantically meaningful Web, for which EAD was poorly prepared. New and closely related metadata transmission standards were developed, most notably Encoded Archival Context - Corporate bodies, Persons, and Families (EAC-CPF), opening new frontiers in archival metadata. Finally, over a decade of working with EAD gave archivists a general sense that it was too complex, too forgiving, and too flexible for its own good.
In 2010, following an update to its by-laws concerning standards maintenance, the SAA Standards Committee charged a new Technical Subcommittee for Encoded Archival Description (TS-EAD) to oversee the maintenance of the standard. Recognizing that EAD needed an update, its charge instructed TSEAD to complete a revision of the standard within five years.

TS-EAD completed the revision of EAD with the help of the SAA Schema Development Team and with many contributions, large and small, from the international EAD community. EAD3 is the result of four public comment periods, countless feedback, three working meetings, numerous conference calls, regular presentations to the EAD Roundtable, and lots of careful analysis,
spirited discussion, and hard-won compromise. Notable milestones in the revision process include the initial comment period, which shaped our early agenda; a three-day TS-EAD working meeting at Yale University's Beinecke Rare Book and Manuscript Library, which established a clear direction; and the alpha, beta, and gamma schema releases, which gave the EAD community concrete examples to test and critique.

Early in the revision process TS-EAD published four points of emphasis to guide us as we weighed the benefits of changes to EAD.

Achieving greater conceptual and semantic consistency in the use of EAD.

Exploring mechanisms whereby EAD-encoded information might more seamlessly and effectively connect with, exchange, or incorporate data maintained according to other protocols.

Improving the functionality of EAD for representing descriptive information created in international and particularly in multilingual environments.

Being mindful that a new version will affect current users.
All of the changes made in EAD3 can be seen in the context of these four points. Throughout the revision process, the most difficult decisions concerned proposals that highlighted tensions between them, especially between making EAD more consistent and aligned to other standards and mitigating impact on current users.

TS-EAD's decision-making process focused on detailed analysis and consensusbuilding within the committee. As we received proposals from the community or fellow committee members, individuals or small groups did additional work to better understand the request, clarify the specific impact on the schema, and make recommendations to the committee. Many issues were revisited multiple times as we collectively came to understand better our goals and their impact. Although healthy differences of opinion persisted throughout the revision process, ultimately only one issue had to be decided by an executive decision by the co-chairs. In the alpha schema element and attribute names were converted to camel case, as is the convention in EAC-CPF. This met our goals of conceptual consistency and interoperability with EAC-CPF, but we received strong feedback from the community arguing against the change. Entrenched and opposing opinions - all with strong justifications from our points of emphasis - remained within TS-EAD; ultimately the co-chairs decided to honor precedent and sensitivity to the impact on users and opted to remove camel case.

Of the changes made in EAD3, the most extensive departure from EAD 2002 is the replacement of <eadheader> with < control>. Borrowed from

EAC-CPF with some enhancements, <control> offers a better model for representing information about finding aids, including its identifiers, status, languages, conventions, maintenance history, and sources. One notable change to <control> as modelled in EAC-CPF is the inclusion of <filedesc> from $<$ eadheader $>$. As an aggregation of descriptions of all the material in an archival collection, finding aids have bibliographic attributes, such as a title or a publication statement captured in <filedesc $>$, that are not necessary when documenting authority records.
The elements available within <did> (Descriptive Identification) were extensively updated in order to better support the exchange of key descriptive data between EAD3 and other systems. Some <did> elements, including $<$ origination >, <repository >, and <langmaterial>, were modified to remove mixed content and other ambiguities. The existing <unitdate> and <physdesc> elements were felt to be too lax to constrain and still provide a forward migration path, so new < unitdatestructured > and <physdescstructured> elements were added. These "structured" elements provide nuanced data models for capturing temporal and physical description, while the original elements remain in modified form as unstructured alternatives and to allow for forward migration from EAD 2002. Whereas these new elements provided additional structure, the < daogrp> element, which allowed the creation of extended links to digital archival objects, was simplified to <daoset>, which binds two or more simple <dao> elements.

The access point elements available within <controlaccess $>$, e.g. <persname>, <subject>, < genreform > , etc., were modified in several ways. Each must now contain one or more <part> elements so that multipart terms may be accurately represented in EAD, allowing, for example, the separate capture of an individual's surname, forename, and life dates, etc. They also now share a common set of attributes to improve interoperability with external vocabularies: @identifier, for the code or URI associated with a term, @source, for identifying the originating vocabulary, and @rules, for recording how terms are formulated. The <geogname> element now has an optional child <geographiccoordinates > for encoding longitude, latitude, and altitude information.

Support for multilingual description was addressed by adding @lang and @script attributes to all non-empty elements in EAD3, making it possible to explicitly state what language or script is used therein. Additionally, some elements were modified to allow them to repeat where previously they did not, thus enabling the inclusion of the same data in multiple languages.

Early in the revision process there were multiple requests to simplify EAD, and one suggested measure was reducing the number of elements. However, TSEAD decided that consistency and semantic clarity was a better measure of simplicity, not the number of elements in the schema. The $<$ note $>$ element is a useful case study. In EAD 2002 <note > was available in 8 distinct contexts, each representing a subtly different usage; in EAD3 the < note > element
has been replaced with context-specific elements, including $<$ didnote $>$, $<$ controlnote $>$, and $<$ footnote $>$.
Many other changes can be categorized as supporting the drive for greater conceptual and sematic consistency in EAD. Major descriptive elements that previously could be contained in other descriptive elements were removed in those contexts. For example, <arrangement > is no longer a permitted child of <scopecontent>, <unitdate> is no longer a permitted child of $<$ unittitle $>$, and $<$ dao $>$ is now only available within $<$ did $>$. Block and formatting elements like <list>, <blockquote>, <quote $>$, were modified or created to more closely resemble their HTML counterparts. The <chronlist> element was updated to incorporate <geogname> to convey the locations where events occur, more closely aligning it with its namesake in EAC-CPF. Mixed content models were streamlined to three progressively inclusive sets of elements allowed to intermix with text. Attribute names were disambiguated throughout the schema: @role was changed to @relator on access point elements and @linkrole on linking elements, @type was renamed through the schema to @localtype where no values are supplied by the schema, and to @elementnametype (e.g. @listtype and @unitdatetype) where specified values are supplied. Linking elements - of which there were many in EAD 2002 - were consolidated to a handful and limited to simple links, eliminating overly complicated extended links. The XLink model for linking attributes was preserved, but the XLink namespace, which had been added to the schema versions of EAD 2002, was removed due to the onerous and needless complexity that namespaces introduce when processing XML. Elements that existed solely to support formatting and presentation or were otherwise deemed out of scope for archival description were deprecated, including $<$ frontmatter>, <descgrp>, < runner>, <imprint>, and <bibseries>.

The feature of EAD3 that caused the most heated discussion within TS-EAD was the inclusion of the < relations> element. Introduced in EAC-CPF and added to EAD3 with some modifications, < relations $>$ is available at any level of description and contains one or more < relation > elements. A < relation > describes - in a Linked Open Data-friendly way - the relationship between the records being described and a corporate body, person or family; an archival or bibliographic resource; a function; or another type of external entity. That relationship can be an actionable link and may be qualified by supplying relevant dates or geographic names. XML describing the related entity may be embedded within the < objectxmlwrap> element.

TS-EAD could not reach a consensus regarding the inclusion of <relations>. Some members felt strongly that including < relations > was essential in order to support rich Linked Open Data applications, align with EAC-CPF, and acknowledge draft guidelines on relationships in archival description published by the ICA Committee on Best Practices and Standards. Others felt that it duplicated functionality present in <controlaccess> and other existing elements, added unnecessary complexity, and that incorporating robust support
for Linked Open Data was premature. We ultimately negotiated a compromise: <relations> would be included in EAD3 as an "experimental" element. As an experimental element, it is not guaranteed that < relations > will persist in the next version of EAD in its current form. However, TS-EAD encourages its use so that the EAD community will learn more about how the < relations > model works within archival description. Put simply, a consensus will require more data and experience, and including <relations > provisionally makes that possible.
The revision of EAD 1.0 to EAD 2002 established a precedent that elements to be removed from EAD would first be deprecated - suppressed but available if necessary - before being removed from subsequent versions. All elements deprecated in EAD 2002 were removed from EAD3. TS-EAD endeavored to honor the commitment to deprecate removed elements, however the extent of the changes in EAD3 made comprehensive deprecation impossible. Elements to be removed entirely from the standard remain available in undeprecated versions of EAD3. These include < frontmatter>, < descgrp>, <imprint>, $<$ bibseries $>$, and < runner $>$, as well as the @tpattern attribute. Elements that were replaced by other elements offering commensurate functionality, or whose availability within the standard changed are in most cases not supported in undeprecated EAD3. Two exceptions to that rule are the full EAD 2002 versions of <physdesc> and < unitdate> within <unittitle>, both of which are available in undeprecated EAD3.

EAD3 replaces EAD 2002 as the current, official version of EAD. EAD 2002 was available as a DTD, Relax NG schema, and W3C schema. Additionally, the DTD could be edited to enable the inclusion of deprecated elements. EAD3 continues to be available in DTD, Relax NG, and W3C versions. For repositories who choose to continue to use deprecated elements, an undeprecated version of EAD3 is available in DTD, Relax NG, and W3C varieties. Due to differences between DTDs and schemas, the <objectxmlwrap> element is not available in the DTD versions of EAD3. A Schematron schema is also available to provide further validation functionality for EAD instances, imposing data constraints that either cannot be expressed in DTD, Relax NG, and W3C, or were intentionally removed from the schemas by TS-EAD due to challenges of maintaining code lists outside of our control or to allow alternative data sources or patterns.
All code related to EAD3, including the schemas and DTDs, Schematron schema, and migration style sheet, will be shared with a Creative Commons CC0 license, placing them in the public domain. This tag library is published with a Creative Commons CC BY license, allowing others to distribute, remix, tweak, and build upon it, even commercially, as long as they credit SAA for the original tag library.
EAD3 was possible because of the generous support of the Society of American Archivists, the Gladys Krieble Delmas Foundation, the National Endowment for the Humanities, the Nationaal Archief of the Netherlands, the Beinecke Rare

Book and Manuscript Library, the Institute for Advanced Technology in the Humanities at the University of Virginia, and OCLC Research. Each member of TS-EAD* made invaluable contributions to EAD3, but two merit special mention: Terry Catapano, Schema Development Team chair, for leading the technical development of EAD3, and Kelcy Shepherd, for leading the revision of the Tag Library.
Mike Rush
Bill Stockting
TS-EAD Co-Chairs
*TS-EAD members during the revision process included Mike Rush, co-chair, Yale University; Bill Stockting, co-chair, British Library (UK); Kerstin Arnold, Bundesarchiv (Germany); Michael Fox, Minnesota Historical Society; Kris Kiesling, University of Minnesota; Angelika Menne-Haritz, Bundesarchiv (Germany); Kelcy Shepherd, University of Massachusetts and Amherst College; Claire Sibille, Direction Générale des Patrimoines (France); Henny van Schie, Nationaal Archief / Bibliotheek (Netherlands); and Brad Westbrook, University of California, San Diego, and ArchivesSpace. Notable ex-officio contributors included Jodi Allison-Bunnell, Orbis Cascade Alliance (EAD Roundtable); Anila Angjeli, Bibliothèque nationale de France (TS-EAC); Hillel Arnold, Rockefeller Archives Center (EAD Roundtable); Mark Custer, Yale University (EAD Roundtable); Merrilee Proffitt, OCLC Research; Ruth Kitchin Tillman, Cadence Group (EAD Roundtable); and Katherine Wisser, Simmons College (TS-EAC). Schema Development Team members included Terry Catapano, chair, Columbia University; Karin Bredenberg, Riksarkivet of Sweden; Florence Clavaud, National Archives of France; Michele Combs, Syracuse University; María A. Matienzo, Yale University and DPLA; Daniel Pitti, University of Virginia; and Salvatore Vassallo, Università degli Studi di Pavia (Italy).

## Preface to Revision 1.1.0

EAD3 underwent its first revision from 2018 January 16 to 2018 February 28 in order to address schema errors and expand the standard's element set. This revision consisted of seven changes - one new element (rightsdeclaration), two schema bugfixes, and four datatype/attribute extensions. These changes reflect feedback on the EAD3 1.0.0 release and accomodate requirements for data sharing set forth by consortial members.
EAD3 Revision 1.1.0 sets a new policy for schema releases, in which smaller updates and fixes can be released on a regular basis. These changes will not invalidate existing records, nor will it break existing interoperability - minor revisions will only be expansive.

This update was revised and implemented by the SAA Technical Subcommittee for Encoded Archival Standards (TS-EAS), following a period of feedback in January-February 2018.

## Preface to Revision 1.1.1

EAD3 underwent its first patch revision in 2019. This patch includes one change to the <ref > element, which now allows <foreign> as sub-element and two fixes to the XSD schema.

Furthermore, the updated EAD3 tag library includes additional as well as extended examples for certain elements.

## Preface to Revision 1.1.2

EAD3 underwent its second minor revision in 2023. This patch includes updates to external controlled vocabularies, a fix to the @parallel attribute, and an example update to @linkrole.

## Tag Library Conventions

The EAD Elements section of the Tag Library contains descriptions of 165 elements, arranged alphabetically by element name. It presents information for each element as shown in Figure 1.

Figure

1. Layout of element descriptions.

Entries in the Tag Library that have been updated in the latest revision will be marked with "(revised in [revision number])". Updates that predate the most recent revision will not be marked in the text.

## Tag Name:

Short, mnemonic form of the element name that is used in the machinereadable encoded document. The tag name is the first word at the top of the page. Tag names appear between angle brackets, e.g., <archdesc>, except in the listings under "May occur within" and "May contain," and are always in lowercase.

## Element Name:

Expanded version of the tag name that more fully describes the element's meaning. The full name of the element is usually a word or phrase that identifies the element's purpose. In the Tag Library, the element name follows the tag name on the page defining that element and appears with initial capital letters, e.g., <archdesc> Archival Description.

## Summary:

A brief statement that provides a concise definition of the element, suitable for quick reference.

## May Contain:

Identifies what child nodes (text or elements) may occur within the element being defined. Elements are listed in alphabetical order by tag name. Elements may be empty (e.g., an element which allows no child text or element nodes), or they may contain text (listed as [text]), other elements, or a mixture of text and other elements.Text content cannot include characters that would be interpreted by a parser as action codes. For example, a left angle bracket has to be represented as the character entity reference \< so that it is not misinterpreted as the start of an element name.

## May Occur Within:

Identifies all of the parent elements within which the described element may appear, listed in alphabetical order by tag name. This information conveys information about where and how often an element is available throughout the schema. The definitions for parent elements may provide additional information about an element's usage.

## Attributes:

Identifies all attributes that can be associated with an element. Attributes are represented in lowercase letters in XML coding. The Tag Library uses the convention of preceding an attribute name with an @ symbol (e.g., @identifier), following XPath syntax. See the EAD Attributes section of the tag library for definitions and additional information.

## Description and Usage:

This section begins with one or more paragraphs that provide a more thorough description of the element than that found in the Summary, which may be followed by guidance on use. The terms "parent" and "child" are used to
indicate hierarchical relationships between elements. Standard terminology is also used to suggest the kind of element being discussed. "Wrapper element" indicates an element that cannot contain text directly; a second, nested element must be opened first. Wrapper elements designate sets of elements that comprise a distinctive section of a finding aid, for example, the Descriptive Identification <did>. "Generic element" refers to elements common to many kinds of documents that contain information not specifically related to archival description, e.g., <name> and <num>. "Formatting element" indicates elements that can be used to invoke special text presentation, such as block quotes, chronologies, and emphasis. When the schema enforces a specific sequence of child elements, that sequence is indicated.If useful, context-specific guidance for the usage of an element's attributes is given in an "Attribute usage" section. A "See also" section may be provided to indicate additional elements that are similar, easily confused, or otherwise related to the element being described.

## Availability:

Indicates, within the context of its parent(s), whether the element is required or optional, and whether or not it is repeatable.

## References:

Identifies corresponding elements in other standards, schemas, and markup languages: ISAD(G), MARC, MODS, and HTML. Full crosswalks for ISAD(G), MARC21, and MODS are found in Appendix A.

## Examples:

Most element descriptions include a tagged example to indicate how attributes and elements can be used together. Many of the examples are taken from real finding aids; others have been specially constructed for the Tag Library. The examples illustrate any required sequences of elements, as in the case of children within <control > , or required attributes such as @level in <archdesc>. In other cases, the examples simply show what is possible. Some examples have ellipses, either between or within elements, indicating that other elements or text have been omitted. Some elements have multiple examples-one may show very dense markup with numerous attributes while another may illustrate a minimalist approach to the markup. Either approach is valid in EAD, and it is up to the repository to determine the optimal level of markup based on their specific purposes, functional requirements, resources, or consortial guidelines.

## Attributes

## Introduction

Attributes are associated with most of the elements contained in EAD. Attributes reflect named properties of an element and may take on different values, depending on the context in which they occur. In order to set one or more attributes, an encoder should include the name of the attribute(s) within the same angle brackets as the start tag, together with the value(s) to which the attribute(s) is/are to be set. That is, < [tag] [attribute] ="[value]" $>$ or $<$ [tag] [attribute1] = "[value1]" [attribute2] = "[value2]" >

For example:
<unitdate unitdatetype="inclusive">1937-1992</unitdate>
or
<unitdate unitdatetype="inclusive" normal="1937/1992">1937-1992
</unitdate>
Most attributes are optional, though some are required. The attribute description indicates whether an attribute is required. This information is also available in the Attributes section of each element description.
The value of attributes may be constrained by the schema using specific attribute type values. For example, @id attribute is of type ID, which constrains its value to a string beginning with an alphabetic character. An @id value must be unique within the EAD instance within which it occurs, that is, no other tag in the entire document can have the same @id value. EAD attributes have the following data types:

## anyURI:

A Uniform Resource Identifier. This may be a Uniform Resource Locator (URL) or a Uniform Resource Name (URN). Both relative and absolute URIs are allowed.

## ENTITY:

The name of a nonparsed entity that has been declared in the declaration subset of the document. For example, @entityref must contain the name of an entity that has been declared in the declaration subset. Processing software can use the reference to the nonparsed entity to display the entity in the body of the text or in a new window.

## ID:

Unique identifier. For example, most elements have an @id, so that a unique code can be established for and used to refer to that specific element. The content of the @id is of the type called "ID". Parsers verify that the value (capitalization of data types follows the documentation found in the W3C Recommendation XML Schema Part 2: Datatypes Second Edition (http://www.w3.org/TR/xmlschema-2/)
of attributes of type "ID" are unique. The values of @id must begin with an alpha, not numeric, character, either upper or lowercase, and may contain a . (period), : (colon), - (hyphen), or _ (underscore), but not a blank space. See also attributes of type "IDREF."

## IDREF:

ID reference value; must match an existing ID of another element in the document. For example, the <ptr> element has a @target attribute that can only be an "IDREF," which means it has to reference a valid ID in another element.

## IDREFS:

List of ID reference values.

## NMTOKEN:

A name token, which can consist of any alpha or numeric character, as well as a . (period), : (colon), - (hyphen), or _ (underscore), but not a blank space. A number of attributes in EAD where a character string from a code list is to be used are of the type "NMTOKEN".

## string:

The most general data type, a string can contain any sequence of characters allowed in XML. Certain characters may have to be represented with an entity reference, for example \< for $<$, and \& for \&.

## token:

A type of string that may not contain carriage return, line feed or tab characters, leading or trailing spaces, and any internal sequence of two or more spaces.
The attribute value definitions in the DTD versions of EAD3 differ slightly from those of the Relax NG and W3C Schema versions. The DTD has a limited set of attribute types so the anyURI, token, and string data types were converted to "CDATA" (i.e. Character Data).

When the EAD schema limits attribute values to a few choices, those values are declared in the schema in what is known as a "closed list." For example, the values of @audience are limited to either "external" or "internal." Other attributes are associated with semi-closed lists. Such lists include those values believed to be the most useful in many contexts, but other values are allowed. For example, < dsc> defines several values for @dsctype, including "otherdsctype" which may be used with @otherdsctype to specify values that are not in the semi-closed list for @dsctype. The definitions for some values in the closed and semi-closed lists appear below.

The following is a complete list of all the attributes that occur in EAD, and some discussion of how they may be used. Further, context-specific information
about the use of certain attributes may be found in the "Attribute usage" section of the element descriptions.

## @abbr Abbrevation (Table of Contents)

| Summary: | An abbreviation for a word or phrase that is expressed in an expanded form in the text of the current element; used for searching and indexing purposes. Available only in <expan>. |
| :---: | :---: |
| Data Type: | token |
| Examples: | ```<didnote>File also contains materials from the <expan abbr="ACLU"> American Civil Liberties Union </expan> </didnote>``` |
|  | ```<c02> <did> <unittitle>``` |
|  | ```<expan abbr="UNESCO"> United Nations Educational, Scientific and Cultural Organization </expan> </unittitle>``` |
|  | $\begin{gathered} \text { [.c02> } \\ \text { </] </did> } \end{gathered}$ |

## @actuate Actuate (Table of Contents)

| Summary: | A control that defines whether a rendering application should present an actionable link automatically (onload) or when requested by the user (onrequest). is used in conjunction with @show to determine link behavior. |
| :---: | :---: |
| Values: | none, onload, onrequest, other |
| Example: | ```<daoset label="Digital Objects" coverage="part"> <dao daotype="derived" coverage="part" actuate="onload" show="embed" linktitle="Chapter 1" localtype="thumbnail" href="http://imgs.ud.edu/archives/image/ f12001_1thumb.gif"/> <dao daotype="derived" coverage="part" actuate="onrequest" show="new" linktitle="Chapter 1" localtype="fullsize" href="http://imgs.ud.edu/archives/image/ f12001_1.jpg"/> </daoset>``` |

## @align Alignment (Table of Contents)

| Summary: | Horizontal position of the text within a column, indicating whether text should be displayed flush left, flush right, centered in the column, or justified (flush both left and right). Available in $<$ colspec $>$, $<$ entry>, and $<$ tgroup $>$. |
| :---: | :---: |
| Values: | left, right, center, justify, char |
| Examples: | ```<table frame="all" colsep="true" rowsep="true"> <head>Dates of Existence for Local Chapters</head> <tgroup align="center" cols="3"> <colspec colname="chaptertitle" colnum="1"/> <colspec colname="yearformed" colnum="2"/> <colspec colname="yeardisbanded" colnum="3"/> <thead valign="middle"> <row> <entry colname="chaptertitle">Chapter Title</entry> <entry colname="yearformed">Year Formed</entry> <entry colname="yeardisbanded">Year Disbanded</entry> </row> </thead> <tbody valign="middle"> <row> <entry colname="chaptertitle">Local Chapter 543</entry> <entry colname="yearformed">1923</entry> <entry colname="yeardisbanded">1967</entry> </row>``` |
|  | $\begin{gathered} \text { </tbody> } \\ \text { </tgroup> } \\ \text { </table> } \end{gathered}$ |

```
<table frame="none">
    <tgroup cols="3">
        <colspec colnum="1" colname="1"
        align="left" colwidth="50pt"/>
        <colspec colnum="2" colname="2"
        align="left" colwidth="50pt"/>
        <colspec colnum="3" colname="3"
        align="left" colwidth="50pt"/>
        <thead>
            <row>
                            <entry colname="1">Major Family
                    Members</entry>
                    <entry colname="2">Spouses</entry>
                    <entry colname="3">Children</entry>
                </row>
        </thead>
        <tbody>
                <row>
                    <entry colname="1">John Albemarle
                    (1760-1806)</entry>
                    <entry colname="2">Mary Frances
                    Delaney (1769-1835)</entry>
                    <entry colname="3">John Delaney
                    Albemarle (1787-1848)</entry>
                </row>
        [. . .] </tbody>
    </tgroup>
</table>
```

## @althead Alternative Heading (Table of Contents)

Summary: An alternative short form of the heading element $<$ head $>$ that may be used, for example, to create a running header.

Data Type:
Example:

```
<bioghist>
    <head althead="Family relations">Bach family
    relations listing spouses and children of
    the major family members</head>
    <table pgwide="true">
        <tgroup cols="3">
            <colspec colnum="1" colname="member"/>
            <colspec colnum="2" colname="spouse"/>
            <colspec colnum="3" colname="child"
            align="char" char="*" charoff="2"/>
            <thead>
                    <row>
                            <entry colname="member">Major
                        family members</entry>
                        <entry
                        colname="spouse">Spouses</entry>
                        <entry
                        colname="child">Children</entry>
                    </row>
            </thead>
            <tbody> </tbody>
            </tgroup>
    </table>
</bioghist>
```

## @altrender Alternative Render (Table of Contents)

Summary:
Data Type:

Example: | Specifies an alternative rendering for the content of |
| :--- |
| the current element. May be used if the element is to |
| be displayed or printed differently than the rendering |
| established in a style sheet for other occurrences of |
| the element, and the values available for @render are |
| insufficient. See also @render. |

token
<titlestmt>
<titleproper localtype="formal"> Guide
to the Abraham Hayward Collection
</titleproper>
<titleproper localtype="filing"
render="altrender" altrender="nodisplay"
audience="internal"> Hayward (Abraham)
Collection </titleproper>
<author>by Michael Rush</author>
</titlestmt>

## @approximate Approximate (Table of Contents)

| Summary: | Indicates that the value provided is not exact. Available |
| :--- | :--- |
|  | in <quantity $>$. |
| Values: | false, true |

## @arcrole Arc Role (Table of Contents)

| Summary: | A URI that describes the nature of the source of a link as relative to the target of the link. |
| :---: | :---: |
| Data Type: | anyURI |
| Example: | ```<relation relationtype="cpfrelation" arcrole="hasSubject"> <relationentry>Carl Philipp Emanuel Bach</relationentry> <descriptivenote> <p>Bach's son</p> </descriptivenote> </relation>``` |

## @audience Audience (Table of Contents)

Summary: | An attribute that helps control whether the information |
| :--- |
| contained in the element should be available to all |
| viewers or only to repository staff. Available for all |
| elements except < lb > and < colspec > . The attribute |
| can be set to "external" in <archdesc> to allow |
| access to all the information about the materials being |
| described in the finding aid, but specific elements |
| within <archdesc> can be set to "internal" to reserve |
| that information for repository access only. This |
| feature is intended to assist application software in |
| restricting access to particular information by explicitly |
| identifying data that is potentially sensitive or may |
| otherwise have a limited audience. Special software |
| capability may be needed, however, to prevent the |
| display or export of an element marked "internal" |
| when a whole finding aid is displayed in a networked |
| environment. |
| external, internal |

| render="altrender" altrender="nodisplay" |
| audience="internal"> Hayward (Abraham) |
| Collection </titleproper> |
| <author>by Michael Rush</author> |

</titlestmt>

## @base Base (Table of Contents)

| Summary: | Used to specify a base URI that is different than the base URI of the EAD instance. This allows any relative URIs provided on attributes of a specific element or its descendants to be resolved using the URI provided in that element's @base. Available on $<$ archdesc $>,<\mathrm{c}\rangle,<\mathrm{c} 01>,<\mathrm{c} 02>,<\mathrm{c} 03>$, $<\mathrm{c} 04\rangle,<\mathrm{c} 05\rangle,<\mathrm{c} 06\rangle,<\mathrm{c} 07\rangle,<\mathrm{c} 08\rangle,<\mathrm{c} 09\rangle$, $<\mathrm{c} 10\rangle,<\mathrm{c} 11\rangle,<\mathrm{c} 12\rangle,<$ control $\rangle,<$ daoset $\rangle$, $<$ ead $>$, <relations $>$, <sources $>$. |
| :---: | :---: |
| Data Type: | anyURI |
| Example: | ```<daoset base="https://calisphere.org/item/"> <dao daotype="otherdaotype" otherdaotype="surrogate" href="d3888b77-7d95-4fd0-bcdd-ab5551a4f013"/ > <dao daotype="otherdaotype" otherdaotype="surrogate" href="d5e032bf-57a3-45e9-9f14-1782bc2e95e7"/ > <dao daotype="otherdaotype" otherdaotype="surrogate" href="fd76d8fb- cafb-44c5-a5b5-e34673498b7a"/> </daoset>``` |

## @calendar Calendar (Table of Contents)

$\left.\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { System of reckoning time, such as the Gregorian } \\ \text { calendar or Julian calendar. Suggested values } \\ \text { include but are not limited to "gregorian" and } \\ \text { "julian." Available in < date > , <unitdate>, and } \\ \text { <unitdatestructured>. }\end{array} \\ \text { Data Type: } & \text { NMTOKEN } \\ \text { Example: } & \text { <archdesc level="fonds" localtype="inventory" } \\ \text { relatedencoding="ISAD(G) v2" } \\ \text { encodinganalog="3.1.4" lang="dut" } \\ \text { script="Latn"> } \\ \text { <did> } \\ \text { <unittitle } \\ \text { encodinganalog="3.1.2">Nederlandsche Gist- } \\ \text { en Spiritusfabriek en Pharmaceutische }\end{array}\right\}$

## @certainty Certainty (Table of Contents)

Summary: The level of confidence for the information given in $<$ date > , < unitdate > , or < unitdatestructured > , e.g., approximate or circa.
Data Type:
NMTOKEN

```
<unitdatestructured calendar="gregorian"
certainty="approximate" datechar="creation"
era="ce" unitdatetype="inclusive">
    <daterange>
        <fromdate
        standarddate="1950">1950</fromdate>
        <todate standarddate="2000">2000</todate>
    </daterange>
</unitdatestructured>
```

## @char Character (Table of Contents)

## @charoff Character Offset (Table of Contents)

| Summary: | Used with horizontal character alignment, such as decimal alignment. When the @align value is "char," this is the percentage of the current column width to the left edge of the alignment character. Value is a number or starts with a number. Available in <colspec> and <entry>. |
| :---: | :---: |
| Data Type: | NMTOKEN |
| Example: | ```<bioghist> <head althead="Family relations">Bach family relations listing spouses and children of the major family members</head> <table pgwide="true"> <tgroup cols="3"> <colspec colnum="1" colname="member"/> <colspec colnum="2" colname="spouse"/> <colspec colnum="3" colname="child" align="char" char="*" charoff="2"/> <thead> <row> <entry colname="member">Major family members</entry> <entry colname="spouse">Spouses</entry> <entry colname="child">Children</entry> </row> </thead> <tbody> [...] </tbody> </tgroup> </table> </bioghist>``` |

## @colname Column Name (Table of Contents)

Summary: $\quad$ Name of a column in which an entry appears. Value is a character string made up of letters and numbers with no spaces inside it. Available in <colspec> and <entry>.

Data Type:
Example:

NMTOKEN

```
<table frame="all" colsep="true" rowsep="true">
    <head>Dates of Existence for Local
    Chapters</head>
    <tgroup align="center" cols="3">
        <colspec colname="chaptertitle"
        colnum="1"/>
        <colspec colname="yearformed" colnum="2"/>
        <colspec colname="yeardisbanded"
        colnum="3"/>
        <thead valign="middle">
            <row>
                    <entry colname="chaptertitle">Chapter
                Title</entry>
                    <entry colname="yearformed">Year
                    Formed</entry>
                    <entry colname="yeardisbanded">Year
                Disbanded</entry>
            </row>
        </thead>
        <tbody valign="middle">
            <row>
                    <entry colname="chaptertitle">Local
                    Chapter 543</entry>
                    <entry
                    colname="yearformed">1923</entry>
                    <entry
                    colname="yeardisbanded">1967</entry>
            </row>
        </tbody>
    </tgroup>
</table>
```

## @colnum Column Number (Table of Contents)

Summary: The number of the column, counting from 1 at the left of the table. Value is a number. Available in < colspec>.
Data Type:
NMTOKEN

<table frame="all" colsep="true" rowsep="true"> <head>Dates of Existence for Local Chapters</head>
<tgroup align="center" cols="3">
<colspec colname="chaptertitle" colnum="1"/> <colspec colname="yearformed" colnum="2"/> <colspec colname="yeardisbanded" colnum="3"/> <thead valign="middle">
<row>
<entry colname="chaptertitle">Chapter
Title</entry>
<entry colname="yearformed">Year
Formed</entry>
<entry colname="yeardisbanded">Year
Disbanded</entry>
</row>
</thead> <tbody valign="middle">
<row>
<entry colname="chaptertitle">Local
Chapter 543</entry>
<entry
colname="yearformed">1923</entry>
<entry
colname="yeardisbanded">1967</entry>
</row>
</tbody>
</tgroup>
</table>

## @cols Columns (Table of Contents)

Summary: The number of columns in a table. Required in $<$ tgroup $>$.
Data Type: NMTOKEN

Example:

```
<table frame="all" colsep="true" rowsep="true">
    <head>Dates of Existence for Local
    Chapters</head>
    <tgroup align="center" cols="3">
        <colspec colname="chaptertitle"
        colnum="1"/>
        <colspec colname="yearformed" colnum="2"/>
        <colspec colname="yeardisbanded"
        colnum="3"/>
        <thead valign="middle">
            <row>
                        <entry colname="chaptertitle">Chapter
                    Title</entry>
                    <entry colname="yearformed">Year
                        Formed</entry>
                    <entry colname="yeardisbanded">Year
                    Disbanded</entry>
            </row>
        </thead>
        <tbody valign="middle">
            <row>
                            <entry colname="chaptertitle">Local
                            Chapter 543</entry>
                            <entry
                            colname="yearformed">1923</entry>
                    <entry
                    colname="yeardisbanded">1967</entry>
            </row>
        </tbody>
        </tgroup>
</table>
```

## @colsep column Separator (Table of Contents)

## @colwidth Column Width (Table of Contents)

$\left.\begin{array}{l}\text { Summary: } \begin{array}{l}\text { Width of the column measured in fixed units or relative } \\ \text { proportions. For fixed width, use a number followed } \\ \text { by a unit. Possible unit values are "pt" for point, "cm" } \\ \text { for centimeters, "in" for inches, etc. (e.g., "2in" for }\end{array} \\ \text { 2 inches). Proportional width can be indicated with } \\ \text { a number and asterisk (e.g., "5*" for five times the } \\ \text { proportion). All integers are positive. Use values that } \\ \text { are appropriate to the software that governs the display } \\ \text { of the resulting table such as a web browser or XSL } \\ \text { format objects processor. Available in < colspec>. }\end{array}\right]$

## @containerid Container ID (Table of Contents)

| Summary: | An attribute for <container $>$ that takes as its <br> value a locally assigned identifier (e.g. barcode) for <br> the container described. Unlike @id, the value of <br> @containerid need not be unique within the document, |
| :--- | :--- |
| and does not have to conform to the rules for the ID |  |
| data type. |  |

## @coordinatesystem Coordinate System (Table of

Contents)

| Summary: | A code for a system used to express geographic <br> coordinates, for example WGS84, (World Geodetic |
| :--- | :--- |
| System), OSGB36 (Ordnance Survey Great |  |
| Britain), or ED50 (European Datum). Required in |  |
| < |  |

## @countrycode Country Code (Table of Contents)

Summary:

Data Type: $\quad$| A unique code for the country in which the materials |
| :--- |
| being described are held. Content of the attribute |
| should be a code taken from ISO 3166-1 Codes for |
| the Representation of Names of Countries and their |

Examples: | Subdivisions, column A2, or another controlled list, |
| :--- |
| as specified in the @countryencoding attribute in |
| <control > . Available in <maintenanceagency> and |
| <unitid>. |

| NMTOKEN |
| :--- |
| <unitid countrycode="US" repositorycode="cu-i" |
| label="Collection number">MS-R72</unitid> |
| <maintenanceagency countrycode="IE"> |
| <agencycode>IE-NAI</agencycode> |
| <agencyname>National Archives of |
| Ireland</agencyname> |
| </maintenanceagency> |

## @countryencoding Country Encoding (Table of

 Contents)\(\left.$$
\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { The authoritative source or rules for values supplied } \\
\text { in @countrycode in <maintenanceagency }>\text { and } \\
\text { <unitid>. If the value "othercountryencoding" is }\end{array}
$$ <br>
selected an alternate code list should be specified <br>
in <conventiondeclaration>. Available only in <br>

<control>.\end{array}\right\}\)| iso3166-1, othercountryencoding |
| :--- |
| Example: |
| <control countryencoding="iso3166-1" |
| dateencoding="iso8601" langencoding="iso639-2b" |
| repositoryencoding="iso15511" |
| scriptencoding="iso15924" |
| relatedencoding="MARC21"> [...] </control> |

## @coverage Coverage (Table of Contents)

Summary: $\quad$| Specifies whether a statement of physical description |
| :--- |
| or digital archival object(s) relates to the entire unit |
| being described or only a part thereof. Required in |
| <daoset> and < physdescstructured> |
| <dao optional in |

## @daotype Digital Archival Object Type (Table of

Contents)

| Summary: | Specifies the origin of a digital archival object: born digital, derived from non-digital records, other, or not known. Required in $<$ dao $>$. |
| :---: | :---: |
| Values: | borndigital, derived, otherdaotype, unknown |
| Example: | ```<c> <did> <unittitle>Quilting bee, Union Town, Md.</unittitle> <unitdate>1930</unitdate> <physdesc>1 photograph</physdesc> <dao daotype="derived" actuate="onload" show="embed" href=" http:// www.lib.utexas.edu/taro/utcah/00462/ cah-00462.jpg "/> </did> </c>``` |

## @datechar Date Characterization (Table of Contents)

Summary: Term characterizing the nature of a date, such as dates of creation, accumulation, or modification. Available in $<$ unitdate $>$ and $<$ unitdatestructured $>$.

Data Type:
Example:
token

```
<unitdatestructured calendar="gregorian"
certainty="approximate" datechar="creation"
era="ce" unitdatetype="inclusive">
    <daterange>
        <fromdate
        standarddate="1950">1950</fromdate>
        <todate standarddate="2000">2000</todate>
    </daterange>
</unitdatestructured>
```

## @dateencoding Date Encoding (Table of Contents)

| Summary: | The authoritative source or rules for values provided <br> in @normal in < date $>$ and < unitdate $>$. If the value <br> "otherdateencoding" is selected an alternate code list <br> should be specified in <conventiondeclaration>. |
| :--- | :--- |
| Values: | iso8601, otherdateencoding |
| Example: | <control countryencoding="iso3166-1" <br> dateencoding="iso8601" langencoding="iso639-2b" <br> repositoryencoding="iso15511" <br> scriptencoding="iso15924" <br> relatedencoding="MARC21"> [...] </control> |

## @dsctype Description of Subordinate Components Type (Table of Contents)

```
                    stand statistics are quite small and
                    difficult to read.</p>
    [ . . .] </scopecontent>
    </c01>
[ . . .] </dsc>
```

## @encodinganalog Encoding Analog (Table of Contents)

Summary: | A field or element in another descriptive encoding |
| :--- |
| system to which an EAD element or attribute is |
| comparable. Mapping elements from one system to |
| another enables creation of a single user interface |
| that can index comparable information across |
| multiple schemas. The mapping designations may |
| also enable a repository to harvest selected data |
| from a finding aid, for example, to build a basic |
| catalog record, or OAI-PMH compliant Dublin Core |
| record. The @relatedencoding attribute may be |
| used in <ead>, < control>, or <archdesc> to |
| identify the encoding system from which fields are |
| specified in @encodinganalog. If @relatedencoding |
| is not used, then include the system designation in |
| @encodinganalog. |

## @entityref Entity Reference (Table of Contents)

| Summary: | The name of a nonparsed entity declared in the declaration subset of the document that points to a machine-processable version of the cited reference. Available in $<$ dao $>,<\mathrm{ptr}>$, and $<\mathrm{ref}\rangle$. |
| :---: | :---: |
| Data Type: | ENTITY |
| Example: | ```<publisher> San Joaquin County Historical Society and Museum <lb/> Lodi, California <lb/> <ptr actuate="onload" show="embed" entityref="sjmlogo"/> </publisher>``` |

## @era Era (Table of Contents)

| Summary: | Period during which years are numbered and dates reckoned, such as CE (Common Era) or BCE (Before Common Era). Suggested values include "ce" and "bce". Available in < date > , < unitdate > , and $<$ unitdatestructured>. |
| :---: | :---: |
| Data Type: | NMTOKEN |
| Example: | ```<unitdatestructured calendar="gregorian" certainty="approximate" datechar="creation" era="ce" unitdatetype="inclusive"> <daterange> <fromdate standarddate="1950">1950</fromdate> <todate standarddate="2000">2000</todate> </daterange> </unitdatestructured>``` |

## @expan Expansion (Table of Contents)

Summary: $\quad$ The full form of an abbreviation or acronym found in an element's text; used for indexing and searching purposes. Available only in <abbr>.

Data Type: string
Example:

```
<c02>
    <did>
        <unittitle>
                <abbr expan="United Nations Educational,
                Scientific and Cultural Organization">
                UNESCO </abbr>
            </unittitle>
        [. . .] </did>
</c02>
```

## @frame Frame (Table of Contents)

Summary: An indication of the position of the external borders (rules) surrounding a table when displayed. Available in $<$ table $>$.

Values:
Example:
all, bottom, none, sides, top, topbot

```
<table frame="none">
    <tgroup cols="3">
        <colspec colnum="1" colname="1"
        align="left" colwidth="50pt"/>
        <colspec colnum="2" colname="2"
        align="left" colwidth="50pt"/>
        <colspec colnum="3" colname="3"
        align="left" colwidth="50pt"/>
        <thead>
            <row>
                <entry colname="1">Major Family
                    Members</entry>
                    <entry colname="2">Spouses</entry>
                    <entry colname="3">Children</entry>
            </row>
        </thead>
        <tbody>
            <row>
                    <entry colname="1">John Albemarle
                    (1760-1806)</entry>
                    <entry colname="2">Mary Frances
                    Delaney (1769-1835)</entry>
                    <entry colname="3">John Delaney
                    Albemarle (1787-1848)</entry>
            </row>
        . . . </tbody>
    </tgroup>
</table>
```

## @href hypertext Reference (Table of Contents)

Summary: \begin{tabular}{l}
The locator for a remote resource in a link. When <br>
linking to an external file, @href takes the form of a <br>
Uniform Resource Identifier (URI). If the value is not in <br>
the form of a URI, the locator is assumed to be within <br>
the document that contains the linking element. <br>

Example: $\quad$| token |
| :--- |
| <rightsdeclaration> |
| <abbr>cco</abbr> |
| <citation href="https://creativecommons.org/ |
| publicdomain/zero/1.0/"/> |
| <descriptivenote/> |
| </rightsdeclaration> |

\end{tabular}

## @id ID (Table of Contents)

Summary: | An identifier that must be unique within the current |
| :--- |
| document and is used to name the element so that it |
| can be referred to, or referenced from, somewhere |
| else. This facilitates building links between the element |
| and other resources. Do not confuse with @identifier, |
| which provides a machine-processable identifier for an |
| entity or concept in an external system. |

Data Type:
Example:

## @identifier Identifier (Table of Contents)

Summary: $\left.\begin{array}{l}\text { On <unitid>, this is a machine-processable unique } \\ \text { identifier for the descriptive component in which } \\ \text { the element appears. On access terms and other } \\ \text { elements whose content is drawn from an authority } \\ \text { file, @identifier is a number, code, or string (e.g. } \\ \text { URI) that uniquely identifies the term being used in a } \\ \text { controlled vocabulary, taxonomy, ontology, or other } \\ \text { knowledge organization system (e.g., the Library of } \\ \text { Congress Name Authority File identifier). In the latter } \\ \text { case, @source may be used to identify the authority }\end{array}\right\}$

```
    label="Accession number"> GTU 2001-8-03
    </unitid>
    <origination label="Creator">

        Outcome Project, and the development
        of his doctoral research, including
        his various publications on the human
        potential movement, up to the completion
        of his doctoral dissertation.</abstract>
        <physloc label="Shelf location">5/
        D/4-5</physloc>
    </did>
[. . .] </archdesc>
```

## @instanceurl Instance URL (Table of Contents)

Summary: The URL for the EAD instance itself (as opposed to HTML or other derivatives, which may be captured in <representation> elements). Available on < recordid>.

Data Type: anyURI
Example:
<control>
<recordid instanceurl="http://
drs.library.yale.edu/findaids/wa-mss-
s-2636.xml">WA MSS S-2636</recordid>
<otherrecordid localtype="mss"> S-2636
</otherrecordid>
<filedesc>[. . .]</filedesc>
[. . .] </control>

## @label Label (Table of Contents)

| Summary: | A display label for an element. Use when a meaningful <br> label cannot be derived by the style sheet from the <br> element name or when a heading element <head> is <br> not available. This attribute is available in all children <br> of <did>, as well as <language > and < script $>$ |
| :--- | :--- |
| Data Type: | string <br> <unitid countrycode="US" repositorycode="cu-i" <br> label="Collection number">MS-R72</unitid> |

## @lang Language (Table of Contents)

Summary: | Indicates the language of the content of an element. |
| :--- |
| Content of the attribute should be a code taken |
| from ISO 639-1, ISO 639-2b, ISO 639-3, or another |
| controlled list, as specified in the @langencoding |
| attribute in <control > . May be used consistently in a |
| multi-lingual finding aid to specify which elements are |
| written in which language. Available on all non-empty |
| elements. |

Data Type: $\quad$| NMTOKEN |
| :--- |
| <controlaccess> |
| <corpname encodinganalog="610" |
| identifier="http://viaf.org/viaf/139169065" |
| lang="eng"> |
| <part>Hudson's Bay Company</part> |
| </corpname> |
| <corpname encodinganalog="610" |
| identifier="http://viaf.org/viaf/139169065" |
| lang="fre"> |
| <part>Compagnie de la Baie d'Hudson</part> |

</corpname>
</controlaccess>

## @langcode Language Code (Table of Contents)

Summary: | The code for the language of the EAD instance |
| :---: |
| and the language of the materials provided as text |
| in <language>. Content of the attribute should |
| be a code taken from ISO 639-1, ISO 639-2b, ISO |
| 639-3, or another controlled list, as specified in the |
| @langencoding attribute in <control>. |

Data Type: | NMTOKEN |
| :---: |

<langmaterial>
<languageset>
<language langcode="lat">Latin</language>
<script scriptcode="Latn"/>
</languageset>
<languageset>
<language langcode="ang">0ld
English</language>
<script scriptcode="Latn" />
</languageset>
<languageset>
<language

\section*{@langencoding Language Encoding (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & Specifies which standard list of codes is used to identify the language of the EAD instance and languages represented in the materials. The codes themselves are specified in @langcode in < language > and @lang in all non-empty elements. Available in <control >. If the value "otherlangencoding" is selected an alternate code list should be specified in <conventiondeclaration>. \\
\hline Values: & iso639-1, iso639-2b, iso639-3, otherlangencoding \\
\hline Example: & ```
<control countryencoding="iso3166-1"
dateencoding="iso8601" langencoding="iso639-2b"
repositoryencoding="iso15511"
scriptencoding="iso15924"
relatedencoding="MARC21">

            description standard.</p>
        </descriptivenote>
    </conventiondeclaration>
[. . .] </control>
``` \\
\hline
\end{tabular}

\section*{@level Level (Table of Contents)}
```
Summary: The hierarchical level of the materials being described by the element. This attribute is available in <archdesc>, where the highest level of material represented in the finding aid must be declared (e.g., collection, fonds, record group), and in \(\langle\mathrm{c}\rangle\) and \(<\mathrm{c} 01>-<\mathrm{c} 12>\), where it may be used to declare the level of description represented by each component (e.g., subgroup, series, file). If none of the values in the semi-closed list are appropriate, the value "otherlevel" may be chosen and some other value specified in @otherlevel.
Values:
```

\section*{Example:}
```
class, collection, file, fonds, item, otherlevel, recordgrp, series, subfonds, subgrp, subseries
```
```
<dsc dsctype="combined">
```

</dsc>
```

\section*{@linkrole Link Role (Table of Contents)}

Summary: A URI that characterizes the nature of the remote resource to which a linking element refers.
Data Type:
anyURI
<representation href="http:// drs.library.yale.edu:8083/fedora/get/ beinecke:jonesss/PDF" linkrole="https:// www.iana.org/assignments/media-types/ application/pdf">PDF version of finding aid</representation>

\section*{@linktitle Link Title (Table of Contents)}

Summary: Information that serves as a viewable caption which explains to users the part that a resource plays in a link. May be useful for meeting accessibility requirements when rendering finding aids in a web browser.

Data Type:
Example:
token
<sources>
<source
lastdatetimeverified="2015-07-03T14:36:00-05:00" href="https://archive.org/details/ dictionaryofamer00drakrich" actuate="onrequest" linktitle="Dictionary of American biography">
<sourceentry>Dictionary of American
biography: including men of the time ...
and a supplement</sourceentry> [. . .] </source>
</sources>

\section*{@listtype List Type (Table of Contents)}

Summary: \(\quad\) Specifies the type of list: a definition list pairs a \(<\) label > with a corresponding <item> containing text that describes the term; an ordered list is a numbered or lettered list; an unordered list is one in which sequence is not critical (e.g., a bulleted list). Available only on <list>.

Values:
Example:
deflist, ordered, unordered
<list listtype="unordered" mark="circle"> <head>List of ministers of May Memorial Unitarian Universalist Church</head> <item>John Storer, Minister 1839-1844</item> <item>Samuel Joseph May, Minister 1845-1868</item>
<item>Samuel R. Calthrop, Minister 1868-1911</item>
<item>John H. Applebee, Minister 1911-1929</item>
<item>Waldemar W. Argow, Minister 1930-1941</item>
<item>Robert E. Romig, Minister 1941-1946</item>
<item>Glenn O. Canfield, Minister
1946-1952</item>
<item>John Fuller, Minister, 1961-1973</item> </list>

\section*{@localtype Local Type (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & This optional attribute provides a means to narrow the semantics of an element, or provide semantics for elements that are primarily structural or semantically weak. The value of @localtype may be from a local or generally used external vocabulary. While the value of @localtype may be any string, to facilitate exchange of data, it is recommended that the value be either the URI or the preferred label for a term defined in a formal vocabulary (e.g., SKOS), which is identified by an absolute URI, and is resolvable to a web resource that describes the semantic scope and use of the value. Local conventions or controlled vocabularies used in @localtype may be declared in <localtypedeclaration> within <control>. \\
\hline Data Type: & token \\
\hline Example: & ```
<c01 level="series">
    <did>
        <unittitle>...</unittitle>
    </did>
    <c02 level="file">
        <did>
            <container localtype="box"> 3
            </container>
            <container localtype="folder"> 18
            </container>
            <unittitle>Parent-Teacher Association of
            Fondsville</unittitle>
            <unitdate unitdatetype="inclusive"
            normal="1959/1972">1959-1972</unitdate>
        </did>
    </c02>
</c01>
``` \\
\hline
\end{tabular}

\section*{@mark Mark (Table of Contents)}

\section*{Summary:}

Values:
Example:

For lists with a @listtype value "unordered," @mark may be used to indicate the character to be used in marking each list entry. Values are drawn from the CSS "list-style-type" property list.
disc, circle, inherit, none, square
<list listtype="unordered" mark="circle"> <head>List of ministers of May Memorial Unitarian Universalist Church</head> <item>John Storer, Minister 1839-1844</item> <item>Samuel Joseph May, Minister 1845-1868</item>
<item>Samuel R. Calthrop, Minister 1868-1911</item>
<item>John H. Applebee, Minister 1911-1929</item>
<item>Waldemar W. Argow, Minister 1930-1941</item>
<item>Robert E. Romig, Minister
1941-1946</item>
<item>Glenn 0. Canfield, Minister 1946-1952</item>
<item>John Fuller, Minister, 1961-1973</item>
</list>

\section*{@morerows More Rows (Table of Contents)}

Summary: \(\quad\) Number of additional rows in a vertical straddle. Value is a number; default value is " 0 " to indicate one row only, no vertical span. Available only in <entry>.
Data Type:
Example:
```
<bioghist>
    <head althead="Family relations">Bach family
    relations listing spouses and children of
    the major family members</head>
    <table pgwide="true">
        <tgroup cols="3">
            <colspec colnum="1" colname="member"/>
            <colspec colnum="2" colname="spouse"/>
            <colspec colnum="3" colname="child"
            align="char" char="*" charoff="2"/>
            <thead>
                    <row>
                    <entry colname="member">Major
                    family members</entry>
                    <entry
                    colname="spouse">Spouses</entry>
                    <entry
                    colname="child">Children</entry>
                    </row>
            </thead>
            <tbody>
                    <row>
                    <entry colname="member"/>
                    <entry colname="spouse"
                    morerows="2" valign="top">Anna
                    Magdalena, geb. Wilcke (1701-
                    1760) </entry>
                    <entry colname="child">* Gottfried
                    Heinrich Bach (1724-1763)</entry>
                    </row>
            </tbody>
            </tgroup>
    </table>
</bioghist>
```

\section*{@nameend Name End (Table of Contents)}

Summary: Name of the rightmost column of a span. The value must be a column name, as defined by @colname on <colspec>. Available only in <entry>.
Data Type:
Example:
NMTOKEN
```
<scopecontent>
    <table pgwide="false">
        <tgroup cols="4">
            <colspec colnum="1"
            colname="correspondent"/>
            <colspec colnum="2" colname="total"/>
            <colspec colnum="3" colname="sent"/>
            <colspec colnum="4" colname="received"/>
            <thead>
                <row>
                    <entry
                        colname="correspondent">Correspondent</entry>
                    <entry colname="total">Total number
                    of letters</entry>
                    <entry namest="sent"
                    nameend="received">Letters sent and
                    received</entry>
                </row>
            </thead>
            <tbody>
                <row>

\section*{@normal Normal (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A standardized form of the content of an element that is in uncontrolled or natural language. A standardized form, usually from a controlled vocabulary list, of the content of the following elements can be provided to facilitate retrieval: <corpname>, <famname>, \(<\) function \(>\), <genreform \(>\), <geogname \(>\), \(<\) name \(>\), <occupation \(>\), <persname \(>\), < subject \(>\), and <title>. In <unittitle>, @normal may be used to provide a sorting form of a unit title with initial articles. \\
\hline Summary: & In <date> and <unitdate>, it is recommended that @normal follows ISO 8601 Representation of Dates and Times or other standard date format. An alternate date normalization pattern may be specified by selecting "otherdateencoding" as the value for @dateencoding in <control> and specifying the alternate date encoding pattern in <conventiondeclaration>. \\
\hline Data Type: & token \\

\end{tabular}

\section*{@relationtype Relation Type (Table of Contents)}

Summary: \(\quad\) A required attribute of \(<\) relation \(>\) used to indicate the type of entity that is related to the materials being described.

Values: cpfrelation, resourcerelation, functionrelation, otherrelationtype

\section*{Example:}

\section*{@relator Relator (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A contextual role or relationship that a controlled access term has with the materials described. For example, <persname > may have a @relator value of "creator" or "photographer." EAD does not supply a controlled list of values for this attribute, but use of some other controlled vocabulary (e.g., MARC relator codes), is encouraged. \\
\hline Data Type: & token \\
\hline Example: & ```
<bibref>
    <persname relator="author">
        <part>Kinder, Dolores.</part>
    </persname>
    <title>
        <part>Once Upon a Lullaby.</part>
    </title>
    <geogname>
        <part>New York: </part>
    </geogname>
    <corpname relator="publisher">
        <part>Wells & Sons, </part>
    </corpname>
    <date localtype="publication"> 1931 </date>
</bibref>
``` \\
\hline
\end{tabular}

\section*{@render Render (Table of Contents)}

Summary: Controls the formatting of the content of an element for display and print purposes. Available in \(<\mathrm{emph}\rangle\), \(<\) foreign \(>\), <quote \(>\), <title \(>\), and \(<\) titleproper \(>\). See also @altrender.

Values:

\section*{Example:}
altrender, bold, bolddoublequote, bolditalic, boldsinglequote, boldsmcaps, boldunderline, doublequote, italic, nonproport, singlequote, smcaps, sub, super, underline
```

\section*{@rowsep Row Separator (Table of Contents)}
Summary:
Specifies whether the rows in a table are to be
separated by horizontal lines. A value of "false"
indicates that no line is displayed, and "true" indicates
that a line should be displayed below the row.
false, true
@rules Rules (Table of Contents)

\section*{@script Script (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & Indicates the writing script of the content of an element (e.g., Cyrillic, Katakana). Content should be taken from ISO 15924 Codes for the Representation of Names of Scripts, or another controlled list, as specified in the @scriptencoding attribute in <control>. May be used consistently in a multi-lingual finding aid to specify which elements are written in which script. Available on all non-empty elements. \\
\hline Data Type: & NMTOKEN \\
\hline Example: & ```
<bioghist> [. . .]
    <p>Thanatos (
        <foreign lang="grc" script="Grek"> Oávatos
        </foreign>
    ) was the personification of death. He was
    a minor figure in Greek mythology, often
    referred to, but rarely appearing in person.
    </p>
[. . .] </bioghist>
``` \\
\hline
\end{tabular}

\section*{@scriptcode Script Code (Table of Contents)}
Summary:
Data Type: \begin{tabular}{c} 
The code for the writing script used with a given \\
language. Content should be taken from ISO 15924 \\
Codes for the Representation of Names of Scripts, \\
or another controlled list, as specified in the \\
@scriptencoding attribute in <control>. Available in \\
<script>.
\end{tabular}
Example: \begin{tabular}{c} 
NMTOKEN \\
<langmaterial> \\
<languageset> \\
<language \\
langcode="jpn">Japanese</language> \\
<script \\
scriptcode="Hira">hiragana</script> \\
<script \\
scriptcode="Kana">katakana</script>
\end{tabular}
</languageset>
<descriptivenote>
<p>This file contains documents in
Japanese, in both the hiragana and

\end{tabular}

\section*{@show Show (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A control that defines whether a remote resource that is the target of a link appears in a new window, replaces the local resource that initiated the link, appears at the point of the link (embed), initiates some other action, or causes no target resource to display. It is used in conjunction with @actuate to determine link behavior. \\
\hline Values: & new, replace, embed, other, none \\
\hline Example: & ```
<control> [. . .]
    <conventiondeclaration>
        <abbr>DACS</abbr>
        <citation href="http://
        www2.archivists.org/standards/DACS"
        lastdatetimeverified="2015-07-02T16:30:21-5:00"
        linktitle="DACS in HTML on SAA website"
        actuate="onload" show="new">Describing
        Archives: a Content Standard</citation>
        <descriptivenote>
            <p>DACS was used as the primary
            description standard.</p>
        </descriptivenote>
    </conventiondeclaration>
[. . .] </control>
``` \\
\hline
\end{tabular}

\section*{@source Source (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & \begin{tabular}{l}
The controlled vocabulary that is the source of the term contained in the element. Available in <corpname \(>\), \(<\) famname \(>\), <function \(>\), < genreform \(>\), \\
<geogname>, <name>, <occupation>, < part>, \(<\) persname>, <physfacet>, <subject>, <term>, \(<\) title \(>\), <unitid \(>\), and < unittype \(>\).
\end{tabular} \\
\hline Data Type: & token \\
\hline Example: & ```
<controlaccess>
    <function encodinganalog="657" source="aat">
        <part>Legislating</part>
    </function>
    <function encodinganalog="657" source="aat">
        <part>Law enforcing</part>
    </function>
    <function encodinganalog="657" source="aat">
        <part>Convicting</part>
    </function>
</controlaccess>
``` \\
\hline
\end{tabular}

\section*{@standarddate Standard Date (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & The standardized form of date expressed in \(<\) datesingle \(>,<\) fromdate \(>\), or \(<\) todate \(>\). It is recommened that @standarddate values follow ISO 8601, for example, 2011-07-22, 1963, or 1912-11, or another standard date format as specified in @dateencoding. \\
\hline Data Type: & token \\
\hline Example: & ```
<unitdatestructured calendar="gregorian"
era="ce">
    <dateset>
        <datesingle standarddate="1963-01-22">22
        January 1963</datesingle>
        <daterange>
            <fromdate standarddate="1971-06-01"> 1
            June 1971 </fromdate>
            <todate standarddate="1974-04-30">30
            April 1974</todate>
        </daterange>
    </dateset>
</unitdatestructured>
``` \\
\hline
\end{tabular}

\section*{@standarddatetime Standard Date Time (Table of} Contents)
\(\left.\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { An ISO 8601-compliant form of the date or date and } \\ \text { time of a specific maintenance event expressed in } \\ \text { <eventdatetime >. For example, 2009-12-31, 2009, }\end{array} \\ \text { 2009-12, 2009-12-31T23:59:59. Available only in } \\ \text { <eventdatetime>. }\end{array}\right\}\)

\section*{@target Target (Table of Contents)}

Summary: A pointer to the ID of another element. Used to create internal links within an XML instance. Available in \(<\mathrm{ptr}>\) and \(<\mathrm{ref}>\).

Data Type:
Example:
IDREF
<indexentry>
<famname>
<part>Hely-Hutchinson family</part> </famname> <indexentry> <genreform> <part>Pedigree, 20th cent.</part> </genreform> <ref target="EngC5769-f74" show="replace" actuate="onrequest">MS. Eng. c. 5769, fol. 74</ref>
</indexentry>
</indexentry>

\section*{＠transliteration Transliteration（Table of Contents）}
\begin{tabular}{ll} 
Summary： & \begin{tabular}{l} 
A value designating the transliteration scheme used in \\
converting one script into another script．For example， \\
the ISO 15919 Transliteration of Devanagari and \\
related Indic scripts into Latin characters．
\end{tabular} \\
Data Type： \\
Example： & \begin{tabular}{c} 
NMTOKEN
\end{tabular} \\
& ＜relations＞ \\
＜relation relationtype＝＂cpfrelation＂＞ \\
＜relationentry localtype＝＂original－ \\
language＂lang＝＂ger＂＞Hannah Arendt \\
（1906－1975）＜／relationentry＞ \\
＜relationentry localtype＝＂translation＂ \\
lang＝＂jap＂transliteration＝＂DIN32708＂＞アー \\
レント，ハナ（1906－1975）＜／relationentry＞
\end{tabular}

\section*{@unit Unit (Table of Contents)}

Summary:
Data Type:
Example:

The type of measurement used to calculate the value provided in \(<\) dimensions \(>\).
token
```
<physdescstructured coverage="whole"
    physdescstructuredtype="materialtype">
        <quantity>10</quantity>
        <unittype>posters</unittype>
        <dimensions>
            <dimentions unit="inches"
            localtype="height">23</dimentions>
            <dimentions unit="inches"
            localtype="width">35</dimentions>
    </dimensions>
</physdescstructured>
```

\section*{@unitdatetype Unit Date Type (Table of Contents)}

Summary: \(\quad\) Identifies the type of date expressed in <unitdate \(>\) or <unitdatestructured>.

Values:
Example:
bulk, inclusive
```
<unitdatestructured certainty="circa"
unitdatetype="inclusive">
    <daterange>
        <fromdate notbefore="1971"
        notafter="1975">around 1973</fromdate>
        <todate standarddate="1992">1992</todate>
    </daterange>
</unitdatestructured>
```

\section*{@valign Vertical Alignement (Table of Contents)}

Summary: Vertical positioning of the text within a table cell.
Values:
Example:
top, middle, bottom
```
<table frame="all" colsep="true" rowsep="true">
    <head>Dates of Existence for Local
    Chapters</head>
    <tgroup align="center" cols="3">

\section*{@xpointer XPOINTER (Table of Contents)}

Summary: The locator for a remote resource in a simple or locator link. Takes the form of a Uniform Resource Identifier plus a reference, formulated in XPOINTER syntax, to a sub-resource of the remote resource. XPOINTER enables linking to specific sections of a document that are relative, i.e., based on their position in the document or their content, rather than by reference to a specific identifier such as an ID.

Data Type:
Example:
token
<relatedmaterial> <p>See the letters from Frederick Douglass, 1870-1886</p>
</relatedmaterial>

\section*{Elements}

```
<address> Address (Table of Contents)

Description and
Usage:
Usage:

Availability:

Examples:

Use to record information about the place where a repository or publisher is located and may be contacted. Examples include a postal address, electronic mail address, and/or phone number.

Use <address > within < repository > when encoding the contact information of the institution or agency providing intellectual access to the materials being described. Use <address> within <publicationstmt> when it contains the address of the publisher of the encoded archival description.

Consider using a style sheet to store address information that occurs in many archival descriptions, as it is easier to update the information when located in a single, shared file.

Within <publicationstmt> :One of <address>, \(<\) date \(>,<\) num \(>,<\mathrm{p}>\), or \(<\) publisher \(>\) is required, repeatable

Within <repository> :Optional, not repeatable

\section*{<agencycode> Agency Code (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A child element of <maintenanceagency > that provides a code for the institution or service responsible for the creation, maintenance, and/or dissemination of the EAD instance. \\
\hline May contain: & [text] \\
\hline May occur within: & maintenanceagency \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use <agencycode> to record a code indicating the institution or service responsible for the creation, maintenance and/or dissemination of the EAD instance. Use of <agencycode > is recommended, as the combination of <agencycode> and the required \(<\) recordid> provide a globally unique identifier for the instance. \\
\hline & It is recommended that the code follow the format of the International Standard Identifier for Libraries and Related Organizations (ISIL: ISO 15511): a prefix, a dash, and an identifier. The code is alphanumeric (characters A-Z, 0-9, solidus, hyphen-minus, and colon) with a maximum of 16 characters. If appropriate to local or national convention, insert avalid ISIL for an institution, whether provided by a national authority (usually the national library) or a service (such as OCLC). If this is not the case then local institution codes may be given with the ISO 3166-1 alpha-2 country code as the prefix to ensure international uniqueness in <agencycode>. \\
\hline Availability: & Optional, not repeatable \\
\hline \multirow[t]{2}{*}{See also:} & Use <agencyname> to record the name of the agency. \\
\hline & Use <otheragencycode> to record any alternative codes representing the agency. \\
\hline
\end{tabular}
<recordid>, which together with <agencycode> provides a globally unique identifier for the EAD instance.

\section*{<archdesc> Archival Description (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A required child element of <ead> that binds together all of the archival descriptive information in an EAD instance. \\
\hline May contain: & accessrestrict, accruals, acqinfo, altformavail, appraisal, arrangement, bibliography, bioghist, controlaccess, custodhist, did, dsc, fileplan, index, legalstatus, odd, originalsloc, otherfindaid, phystech, prefercite, processinfo, relatedmaterial, relations, scopecontent, separatedmaterial, userestrict \\
\hline May occur within: & ead \\
\hline \multirow[t]{10}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
internal)
\end{tabular} \\
\hline & base Optional \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & \begin{tabular}{ll} 
level & Required (values \\
& limited to: class, \\
collection, file, fonds, \\
item, otherlevel, \\
& recordgrp, series, \\
subfonds, subgrp, \\
& subseries)
\end{tabular} \\
\hline & localtype Optional \\
\hline & otherlevel Optional \\
\hline & relatedencoding Optional \\
\hline & script Optional \\
\hline Attribute usage: & The required @level identifies the type of aggregation being described in the EAD instance: class, collection, file, fonds, item, otherlevel, recordgrp, series, subfonds, subgrp, or subseries. If "otherlevel" is used as a value for @level, the @otherlevel should be used to provide an alternative term. \\
\hline Description and & An element for binding together the bulk of an \\
\hline Usage: & EAD document instance, which typically should include elements describing the content, context, and extent of a body of archival materials, as well as containing administrative and supplemental \\
\hline
\end{tabular}
information that facilitates use of the materials. The elements are organized in hierarchical levels that provide a descriptive overview of the whole, optionally followed by more specific description of the component parts. Descriptive information is inherited downward, from one hierarchical level to the next.

The first child of <archdesc> must be the required \(<\) did \(>\) that provides core information about the overall unit being described in the finding aid. This may be followed by a variety of notes and controlled access elements that describe or provide administrative information about the whole of the materials being described. <archdesc> may also include information about subordinate units, which are bound together within <dsc> containing one or more levels of subordinate components. Data elements available in \(<\) archdesc \(>\) are repeatable in components ( \(<\mathrm{c}>\) or \(<\mathrm{c} 01>-<\mathrm{c} 12>\) ) within \(<\) dsc \(>\).

Availability:

\section*{< blockquote > Block Quote (Table of Contents)}
Summary:
May contain:
Attributes:
Description and
Usage:

Availability:
See also:
A generic formatting element that designates an extended quotation.
chronlist, list, p , table
altrender
audience
id
lang script

Optional
Optional (values limited to: external, internal)
Optional
Optional
Optional
An extended quotation or other lengthy text to be set off from the main text by spacing or other typographic distinction, for example, by adding additional line spaces above and below the block quote and by indenting the left margin of the block quote.
<blockquote> is equivalent to the element <blockquote> in HTML.
Optional, repeatable
Use <quote> to identify inline quotes within a block of text.
```

    <head>Administrative History</head>
    <p>As the size of the Yale faculty
    increased, Brewster's new admissions
    policies caused the make up of the
    undergraduate body to shift. By the early
    1960s, most undergraduates had prepared
    at private schools, and many were sons of
    Yale alumni. As with the faculty, Brewster
    felt that Yale was consistently overlooking
    some of the best intellectual student
    talent necessary to maintain the highest
    levels of academic excellence. In a }196
    speech to alumni, Brewster summarized
    his administration's revised recruitment
    policy by stating that Yale would only seek
    students</p>
    <blockquote>
        <p>...whose capacity for intellectual
        achievement is outstanding and who
        also have the motivation to put their
        intellectual capacities to creatively
        influential use, in thought, in art,
```
```
    in science, or in the exercise of
    public or private or professional
    responsibility.</p>
    </blockquote>
</bioghist>
```

\section*{\(<\mathbf{c}>\) Component (unnumbered) (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & An element that designates a subordinate part of the materials being described. \\
\hline May contain: & accessrestrict, accruals, acqinfo, altformavail, appraisal, arrangement, bibliography, bioghist, c, controlaccess, custodhist, did, fileplan, head, index, legalstatus, odd, originalsloc, otherfindaid, phystech, prefercite, processinfo, relatedmaterial, relations, scopecontent, separatedmaterial, thead, userestrict \\
\hline \multirow[t]{10}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & base Optional \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & level Optional (values \\
\hline & limited to: class, \\
\hline & item, otherlevel, recordgrp, series, subfonds, subgrp, subseries) \\
\hline & otherlevel Optional \\
\hline & script Optional \\
\hline \multirow[t]{3}{*}{Attribute usage:} & Use @base to specify a base URI other than the URI of the EAD instance for the purpose of resolving any relative URIs contained within \(\langle\mathrm{c}\rangle\). \\
\hline & Use @encodinganalog to indicate corresponding data elements categories in another data format, such as MARC. \\
\hline & Use @level to identify the logical type of the component, using one of these values: class, collection, file, fonds, item, otherlevel, recordgrp, series, subfonds, subgrp, subseries. Assigning @level for the highest \(<\mathrm{c}>\) is recommended; thereafter the attribute may be used when the repository deems it useful, or when encoding protocols dictate its use. \\
\hline
\end{tabular}

Use @otherlevel to specify the level of a component for which the @level has been set to "otherlevel."
Description and
Usage:

Availability:
References:

As a wrapper for a set of elements, \(<\mathrm{c}>\) provides information about the content, context, and extent of a subordinate body of materials. It is always a child or descendant of \(\langle\mathrm{dsc}\rangle\) and often a child and/ or parent of another \(\langle\mathrm{c}\rangle\). Each \(\langle\mathrm{c}\rangle\) identifies a logical section, or level, of the described materials. The physical filing separations between components need not always coincide with the intellectual separations. For example, \(\mathrm{a}<\mathrm{c}>\) that designates dramatic works might end in the same box in which the next \(<\mathrm{c}>\) begins with short stories. Also, not every \(<\mathrm{c}>\) directly corresponds to a folder or other physical entity. Some \(<\mathrm{c}>\) elements simply represent a logical point in a hierarchical description.

Components may be subdivided into smaller and smaller components and may eventually reach the level of a single item. For example, the components of a collection may be a series, components of series may be subseries, components of subseries may be files, and components of files may be items. A component may be either an unnumbered \(<\mathrm{c}>\) or a numbered \(<\mathrm{c} 01\rangle\), \(<\mathrm{c} 02>\), etc. Numbered and un-numbered components cannot be mixed in an EAD instance, and only up to twelve numbered \(<\mathrm{c}>\mathrm{s}\), ( \(<\mathrm{c} 01>-<\mathrm{c} 12>\) ) may be used in an EAD instance. Numbering components may assist a finding aid encoder in accurately nesting components.
Optional, repeatable
ISAD(G) 3.1.4 is equivalent to @level

\section*{<colspec > Table Column Specification (Table of}

Contents)
\begin{tabular}{|c|c|}
\hline Summary: & An empty formatting element that specifies the position and size of a single column in a table. \\
\hline May contain: & [empty] \\
\hline May occur within: & tgroup \\
\hline \multirow[t]{8}{*}{Attributes:} & \begin{tabular}{ll} 
align & \begin{tabular}{l} 
Optional (values \\
limited to: center, \\
char, justify, left, \\
right)
\end{tabular}
\end{tabular} \\
\hline & char Optional \\
\hline & charoff Optional \\
\hline & colname Optional \\
\hline & colnum Optional \\
\hline & \begin{tabular}{ll} 
colsep & Optional (values \\
limited to: false, true)
\end{tabular} \\
\hline & colwidth Optional \\
\hline & \begin{tabular}{ll} 
rowsep & Optional (values \\
limited to: false, true)
\end{tabular} \\
\hline Attribute usage: & See the Attributes section of the Tag Library for information about specific attributes. \\
\hline Description and Usage: & Use < colspec> to specify the position, size, and display aspects of a column. Attributes specify the unique name of the column, its unique number within the table, its width and rules, and the horizontal alignment of text within the column. Note that the quantity of columns in \(<\) table \(>\) is determined by the @cols of <tgroup > , not by the number of <colspec> elements present. The values set for \(<\) colspec \(>\) override any values implied from \(<\) tgroup \(>\) or \(<\) thead \(>\). \\
\hline Availability: & Optional, repeatable \\
\hline See also: & Related elements \(<\) table \(>\) and \(<\) tgroup \(>\). \\
\hline
\end{tabular}

\section*{Example:}
```
<table frame="none">
    <tgroup cols="3">
        <colspec colnum="1" colname="1"
        align="left" colwidth="50pt"/>
        <colspec colnum="2" colname="2"
        align="left" colwidth="50pt"/>
        <colspec colnum="3" colname="3"
        align="left" colwidth="50pt"/>
        <thead>
            <row>
                            <entry colname="1">Major Family
                        Members</entry>
                    <entry colname="2">Spouses</entry>
                    <entry colname="3">Children</entry>
                </row>
        </thead>
        <tbody>
            <row>
                    <entry colname="1">John Albemarle
                    (1760-1806)</entry>
                    <entry colname="2">Mary Frances
                    Delaney (1769-1835)</entry>
                    <entry colname="3">John Delaney
                    Albemarle (1787-1848)</entry>
                </row>
        . . . </tbody>
    </tgroup>
</table>
```

\section*{\(<\) container \(>\) Container (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A child element of \(<\) did \(>\) for indicating the container in which the material being described is housed, e.g., box, folder. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & did \\
\hline \multirow[t]{10}{*}{Attributes:} & altrender Optional \\
\hline & \begin{tabular}{ll} 
audience & Optional (values \\
limited to: external, \\
internal)
\end{tabular} \\
\hline & containerid Optional \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & label Optional \\
\hline & lang Optional \\
\hline & \begin{tabular}{l}
localtype \\
Optional
\end{tabular} \\
\hline & parent Optional (IDREFS) \\
\hline & script Optional \\
\hline Attribute usage: & Use @parent to indicate the container in which the current container is housed, e.g., a box in which a folder is housed. \\
\hline \multirow[t]{2}{*}{Description and Usage:} & <container> contributes to locating the described materials by indicating the kinds of containers that physically hold the materials and identifying any sequential numbers assigned to those containers. <container > is used most frequently at the component level. This storage information can help researchers understand how extensive the described material is, especially in the absence of a specific <physdescstructured > or <physdesc> statement at the component level. \\
\hline & Consistency in the use of <container> and its attributes is essential to enabling a style sheet to properly display the information, which often consists of a tabular listing of archival materials and their associated boxes, folders, etc. For example, <container localtype = "Box" \(>\) is not necessarily the same as \(<\) container localtype = "box"> to a style sheet. Also keep in mind that a style sheet may automatically display column headings based on the @localtype \\
\hline
\end{tabular}
value. It is important to establish one method of expressing values in @localtype and be consistent within and across your institution's finding aids.

\section*{Availability:}

See also:

Examples:

Optional, repeatable
Use < physloc> to designate the shelves, stacks, rooms, buildings, or other places where the containers are stored.

Use <unitid> to designate control numbers not associated with a physical container, for example, accession numbers.

\section*{\(<\) control \(>\) Control (Table of Contents)}
\begin{tabular}{|c|c|c|}
\hline Summary: & \multicolumn{2}{|l|}{A required child element of <ead> for recording bibliographic and administrative information about an EAD instance.} \\
\hline May contain: & \multicolumn{2}{|l|}{conventiondeclaration, filedesc, languagedeclaration, localcontrol, localtypedeclaration, maintenanceagency, maintenancehistory, maintenancestatus, otherrecordid, publicationstatus, recordid, representation, rightsdeclaration, sources} \\
\hline May occur within: & \multicolumn{2}{|l|}{ead} \\
\hline \multirow[t]{19}{*}{Attributes:} & altrender & Optional \\
\hline & \multirow[t]{2}{*}{audience} & Optional (values \\
\hline & & limited to: external, internal) \\
\hline & \multirow[t]{3}{*}{base countryencoding} & Optional \\
\hline & & Optional (values \\
\hline & & limited to: iso3166-1, othercountryencoding) \\
\hline & \multirow[t]{2}{*}{dateencoding} & Optional (values \\
\hline & & limited to: iso8601, otherdateencoding) \\
\hline & encodinganalog & Optional \\
\hline & id & Optional \\
\hline & lang & Optional \\
\hline & \multirow[t]{2}{*}{langencoding} & Optional (values \\
\hline & & limited to: iso639-1, iso639-2b, iso639-3, otherlangencoding) \\
\hline & \multirow[t]{3}{*}{relatedencoding repositoryencoding} & Optional \\
\hline & & Optional (values \\
\hline & & limited to: iso15511, otherrepositoryencoding) \\
\hline & \multirow[t]{3}{*}{script scriptencoding} & Optional \\
\hline & & Optional (values \\
\hline & & limited to: iso15924, otherscriptencoding) \\
\hline
\end{tabular}

Attribute usage: Use @base to specify a URI (other than the base URI of the EAD instance) to be used for resolving relative URIs within <control> or descendant elements.

Use @countryencoding to identify the authoritative source for values supplied in
@countrycode. This attribute may be set to "iso3166-1" or "othercountryencoding." If the value "othercountryencoding" is selected, further information regarding the country codes used in the instance should be supplied in <conventiondeclaration>.

Use @dateencoding to identify the rules for values provided in @normal, @standarddate, @notbefore, and @notafter in date elements. This attribute may be set to "iso8601" or "otherdateencoding." If the value "otherdateencoding" is selected, further information regarding the rules for normalized date values used in the instance should be supplied in \(<\) conventiondeclaration \(>\).

Use @langencoding to identify the authoritative source for values supplied in @lang and @langcode. This attribute may be set to "iso639-1," "iso639-2b," "iso639-3," or "otherlangencoding." Previous versions of EAD prescribed the use of ISO 639-2b, so "iso639-2b" may be the most commonly used value. If the value "otherlangencoding" is selected, further information regarding the language codes used in the instance should be supplied in <conventiondeclaration>.

Description and Usage:

Use <control> to record any bibliographic information about an EAD instance and administrative information necessary to manage it. < control> can include information about the identity, creation, maintenance, rights, and status of the instance as well as about the languages, rules, and authorities used in the composition of the description.
<control> must contain the following information about the EAD instance:

A unique identifier within \(<\) recordid \(>\). (Other associated identifiers may be given in <otherrecordid>.)

Bibliographic information in < filedesc>, with at least a <titleproper> within \(<\) titlestmt \(>\).

A description of the agency responsible for creation and maintenance in \(<\) maintenanceagency \(>\).

Statements about current version status in \(<\) maintenancestatus \(>\).

Information related to creation, maintenance, and disposition in \(<\) maintenancehistory>.

Additional, optional child elements include four elements to declare languages, rules, and conventions used in and by the EAD instance. <languagedeclaration > may be used to provide information on the language(s) and script(s) used in the description. < conventiondeclaration > provides information on the standards, authorities, or controlled vocabularies used in the instance. <localtypedeclaration > declares the local conventions and controlled vocabularies used in @localtype. <rightsdeclaration > may be used to declare the rights associated with the description itself.
The prescribed order of all child elements (both required and optional) is:
```
< recordid>
< otherrecordid>
< representation>
< filedesc>
<maintenancestatus>
<publicationstatus>
<maintenanceagency>
<languagedeclaration>
<conventiondeclaration>
<rightsdeclaration>
```
```
<localtypedeclaration >
<localcontrol>
<maintenancehistory >
<sources >
```

Many of these elements are repeatable, allowing the recording of multiple languages and conventions, for example.

\section*{<controlaccess> Controlled Access Headings}
(Table of Contents)
\begin{tabular}{|c|c|}
\hline Summary: & An element that binds together elements containing access headings for the described materials. \\
\hline May contain: & blockquote, chronlist, controlaccess, corpname, famname, function, genreform, geogname, head, list, name, occupation, p, persname, subject, table, title \\
\hline May occur within: & archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, controlaccess \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use <controlaccess> to bundle in a single group access points - names, topics, places, functions, occupations, titles, and genre terms - that represent the contexts and contents of the materials described. Although <controlaccess> is often used within <archdesc> to provide significant access terms for the entirety of the materials described, it may be used at the component level to provide terms specific to a component if so desired. \\
\hline & <controlaccess > helps to enable authority-controlled searching across finding aids, particularly when its children contain terms drawn from nationally or internationally controlled vocabularies such as the Library of Congress Subject Headings (LCSH) or the UK Archival Thesaurus (UKAT) for topics, the Virtual International Authority File (VIAF) for names, or GeoNames for places. \\
\hline Availability: & Optional, repeatable \\
\hline See also: & \(<\) relations > contains one or more \(<\) relation \(>\) elements that identify an external entity or concept, and describe the nature of the relationship of the described materials to that entity or concept. \\
\hline
\end{tabular}

\section*{Example:}
```

    </controlnote>
</notestmt>
```

\section*{<conventiondeclaration> Convention Declaration (Table of Contents)}
\begin{tabular}{lll} 
Summary: & \begin{tabular}{l} 
An optional child element of <control \(>\), used to \\
bind together <citation \(>\) with optional <abbr \(>\) and \\
\(<\) descriptivenote \(>\) elements that identify rules or \\
conventions applied in compiling the description.
\end{tabular} \\
May contain: & abbr, citation, descriptivenote
\end{tabular}

Description and
Usage:

A statement about any rules or conventions used in constructing the description. Examples include content standards, controlled vocabularies, or thesauri.

You may use <conventiondeclaration> to:
identify any rules used to formulate the content of controlled access terms and referenced in @rules.
identify any controlled vocabularies used to populate controlled access terms and referenced in @source.
identify any related encoding schemes referenced in @relatedencoding.
specify standards used to formulate data elements or provide codes.
< conventiondeclaration> should always be included when @langencoding, @scriptencoding, @dateencoding, @countryencoding, or @repositoryencoding are set to the "other" value.

Each additional rule or set of rules, controlled vocabulary, or standard should be contained in a separate \(<\) conventiondeclaration \(>\).

It may not be necessary to include <conventiondeclaration > in such cases where the above scenarios are addressed in local or consortial documentation.
<abbr> may be used to identify the standard or controlled vocabulary in a coded structure. The content of <abbr> should be the same value given to @rules, @source, or @relatedencoding when referencing a given convention. Any notes relating to how these rules or conventions have been used may be given within \(<\) descriptivenote>.

The prescribed order of all child elements (both required and optional) is:
\[
\begin{aligned}
& <\text { abbr }> \\
& <\text { citation }> \\
& <\text { descriptivenote> }
\end{aligned}
\]
Availability: Optional, repeatable

See also: Use < localtypedeclaration> to identify local values used in @localtype attributes.

\section*{<corpname > Corporate Name (Table of Contents)}

Summary: An element for identifying the name of an organization or group of people.

May contain:
part
May occur within:
abstract, archref, bibref, controlaccess, entry, event, indexentry, item, namegrp, origination, p, physfacet, ref, repository, unittitle

Attributes:
\begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
encodinganalog & internal) \\
id & Optional \\
identifier & Optional \\
lang & Optional \\
localtype & Optional \\
normal & Optional \\
relator & Optional \\
rules & Optional \\
script & Optional \\
source & Optional \\
& Optional
\end{tabular}

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the corporate body in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local use requires specification of the type of corporate name.

Use @normal to identify a standardized form of the corporate name if not provided in the element itself.

Use @relator to specify, either as a URI or a string, other relationship(s) the corporate name has to the described materials, for example, "compiler," "creator," "collector," or "subject." The schema does not limit
possible values of @relator, but an institution could define and enforce values elsewhere if desired.
\begin{tabular}{|c|c|}
\hline Availability: & Within <indexentry > : Optional, not repeatable \\
\hline & Within all other elements: Optional, repeatable \\
\hline References: & MARC 610, 611, 710, 711 \\
\hline Examples: & ```

\section*{<daoset> Digital Archival Object Set (Table of}

Contents)
\begin{tabular}{lll} 
Summary: & \begin{tabular}{l} 
An element for binding together two or more links to \\
digital archival objects.
\end{tabular} \\
May contain: & dao, descriptivenote \\
May occur within: & did & \\
Attributes: & altrender & \\
& audience & Optional \\
& Optional (values \\
& limited to: external, \\
& internal) \\
& coverage & Optional \\
& & Optional (values \\
& encodinganalog & wholed to: part, \\
& id & Optional \\
& label & Optional \\
& lang & Optional \\
& localtype & Optional \\
script & Optional
\end{tabular}

Attribute usage: Use @coverage to indicate whether the set is part of or the whole of the unit being described.

Use @localtype to indicate the nature of the set of digital archival objects.

Description and
Usage:
Use < daoset > to group multiple links to born digital records or digital representations of the materials being described. <dao> and <daoset> allow the content of an archival collection or record group to be incorporated into the finding aid. These digital representations include graphic images, audio or video clips, images of text pages, and electronic transcriptions of text. The objects can be selected examples, or digital surrogates of all the materials in a collection, fonds, or an individual file.
\(<\) daoset \(>\) must contain more two or more \(<\) dao \(>\) elements, which may be followed by an optional <descriptivenote> to provide a description of the objects being linked to.

\section*{\(<\) date \(>\) Date (Table of Contents)}

Summary: An element used to express a date.

May contain:
May occur within:

Attributes:

Attribute usage: A standard numeric form of the date (YYYY-MM-DD) can be expressed with @normal to facilitate machine processing of dates, for example, 1948-01-01/1998-04-01 (YYYY-MM-DD/YYYY-MMDD), or 1948/1998 (YYYY/YYYY).

Use @localtype to supply a more specific designation, for example, "life," "flourish," "depiction," "publication," or "acquisition."

Use @certainty to indicate the degree of precision in the dating, for example, "circa," "approximately," or "after."

Use @calendar to indicate the calendar from which the date stems, e.g., "gregorian".

Use @era to indicate the era in which the date occurred, e.g., "ce" for Common Era.

Use @normal to capture a standardized expression of the date or dates to facilitate machine processing.

Description and
Usage:

Availability:
See also:

Examples:
Use <date> to highlight any dates that merit encoding and are not more appropriately encoded in other, more specific date-related elements, e.g., \(<\) unitdate \(>\) or <unitdatestructured>.

Optional, repeatable
Do not confuse with <unitdate> and <unitdatestructured>, which provide the date of creation and other relevant dates of the described materials.

Do not confuse with < daterange \(>\), < dateset \(>\), and \(<\) datesingle \(>\), which are used to record dates in the creation (within <unitdatestructured \(>\) ), contextual history (within <chronlist > ), local control of the described materials (within <localcontrol \(>\) ), or their relationships to other entities (within \(<\) relations \(>\) ).

Do not confuse with <eventdatetime>, which is used for the date and time of a maintenance event in the history of the EAD instance.

\section*{<daterange > Date Range (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element for binding together \(<\) fromdate \(>\) and \(<\) todate \(>\) in order to represent a range of dates. \\
\hline May contain: & fromdate, todate \\
\hline May occur within: & chronitem, dateset, localcontrol, relation, unitdatestructured \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Attribute usage: & Use @localtype to supply a more specific characterization of the date range. \\
\hline Description and Usage: & Use \(<\) daterange \(>\) to express a range of dates in the creation, contextual history, or local control of the described materials, or their relationships to other entities such as persons, families, corporate bodies, resources, functions, events, places, and topics. < daterange > contains < fromdate> and/ or \(<\) todate \(>\), and therefore may express a range of dates as a starting point with no end point, a start and end point, or an end point with no starting point. The content of the children of <daterange \(>\) is intended to be a human-readable, natural language expression of the date. If, however, indexing or other machine processing of dates is desired, @standarddate should be used on the children of \(<\) daterange \(>\) to record the date in machine-processable form as well. \\
\hline \multirow[t]{3}{*}{Availability:} & Within <chronitem> and <unitdatestructured>: One of \(<\) daterange \(>,<\) dateset \(>\), or \(<\) datesingle \(>\) is required, not repeatable \\
\hline & Within <dateset>: One of <daterange> or \(<\) datesingle \(>\) is required, repeatable \\
\hline & Within <localcontrol> and <relation > : Optional, not repeatable \\
\hline
\end{tabular}

\section*{See also:}

Examples:
```
<unitdatestructured calendar="gregorian"
era="ce">
    <dateset>
        <datesingle standarddate="1963-01-22">22
        January 1963</datesingle>
        <daterange>
            <fromdate standarddate="1971-06-01">1
            June 1971</fromdate>
            <todate standarddate="1974-04-30">30
            April 1974</todate>
        </daterange>
    </dateset>
</unitdatestructured>
<chronitem>
    <daterange>
        <fromdate>1819</fromdate>
        <todate>1820</todate>
    </daterange>
    <event>Studies theology at Yale
    College</event>
</chronitem>
<unitdatestructured unitdatetype="inclusive">
    <daterange>
        <fromdate notafter="1962">1962</fromdate>
        <todate notafter="1968">1968</todate>
    </daterange>
</unitdatestructured>
<unitdatestructured certainty="circa"
unitdatetype="inclusive">
    <daterange>
        <fromdate notbefore="1971"

    </daterange>
</unitdatestructured>
```

\section*{<dateset> Date Set (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element for encoding complex dates that cannot be adequately represented in one \(<\) datesingle \(>\) or \(<\) daterange \(>\). \\
\hline May contain: & daterange, datesingle \\
\hline May occur within: & chronitem, relation, unitdatestructured \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & <dateset > binds together single dates and date ranges, multiple single dates, or multiple date ranges. <dateset > is used in situations where complex date information needs to be conveyed and requires at least two child elements. These can be a combination of \(<\) datesingle \(>\) and \(<\) daterange \(>\). \\
\hline Availability: & \begin{tabular}{l}
Within <chronitem> and <unitdatestructured>: \\
One of \(<\) daterange \(>,<\) dateset \(>\), or \(<\) datesingle \(>\) is required, not repeatable
\end{tabular} \\
\hline & Within < relation > : Optional, not repeatable \\
\hline Examples: & ```
<unitdatestructured calendar="gregorian"
era="ce">
    <dateset>
        <datesingle standarddate="1963-01-22">22
        January 1963</datesingle>
        <daterange>
            <fromdate standarddate="1971-06-01">1
            June 1971</fromdate>
            <todate standarddate="1974-04-30">30
            April 1974</todate>
        </daterange>
    </dateset>
</unitdatestructured>
``` \\
\hline
\end{tabular}
```
<unitdatestructured>
    <dateset>
        <daterange>
            <fromdate>1900</fromdate>
            <todate>1910</todate>
        </daterange>
        <datesingle>1921 </datesingle>
    </dateset>
</unitdatestructured>
```

\section*{\(<\) datesingle \(>\) Single Date (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & An element for encoding an individual date related to the materials being described. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & chronitem, dateset, localcontrol, relation, unitdatestructured \\
\hline \multirow[t]{8}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & notafter Optional \\
\hline & notbefore Optional \\
\hline & script Optional \\
\hline & standarddate Optional \\
\hline \multirow[t]{3}{*}{Attribute usage:} & Use @localtype to supply a more specific characterization of the date. \\
\hline & Use @notafter and @notbefore to capture the earliest and latest possible dates in machine-processable form in cases when the date is uncertain. \\
\hline & Use @standarddate to provide a machine-processable form of the date. Note that this attribute is for a single date only, while the @normal attribute available on <unitdate> can express a single date or date range. \\
\hline Description and Usage: & \(<\) datesingle \(>\) is an element for expressing a single date in the creation, contextual history, or local control of the described materials, or in their relationships to other entities such as persons, families, corporate bodies, resources, functions, events, places, and topics. <datesingle > may contain actual or approximate dates. The content of the element is intended to be a human-readable, natural language expression of the date. If, however, indexing or other machine processing of dates is desired, @standarddate should be used to record the date in machine-processable form as well. \\
\hline
\end{tabular}

\begin{tabular}{|c|c|}
\hline < defitem > & Definition List Item (Table of Contents) \\
\hline Summary: & A wrapper element for binding pairs of labels and items within a list. \\
\hline May contain: & item, label \\
\hline May occur within: & list \\
\hline Attributes: & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
id & internal) \\
lang & Optional \\
script & Optional \\
& Optional
\end{tabular} \\
\hline Description and Usage: & An element, used within a definition list, that pairs a required \(<\) label \(>\) and \(<\) item \(>\). The item may be an expansion of the label, as in a list of abbreviations. Definition lists are often displayed in two columns. \\
\hline Availability: & Optional, repeatable \\
\hline Example: & ```
<list listtype="deflist">
    <listhead>
        <head01>Abbreviation</head01>
        <head02>Expansion</head02>
    </listhead>
    <defitem>
        <label>ALS</label>
        <item>Autograph Letter Signed</item>
    </defitem>
    <defitem>
        <label>TLS</label>
        <item>Typewritten Letter Signed</item>
    </defitem>
</list>
``` \\
\hline
\end{tabular}

\section*{<descriptivenote> Descriptive Note (Table of}

Contents)
\begin{tabular}{|c|c|}
\hline Summary: & An element used to provide general descriptive information related to its parent element. \\
\hline May contain: & p \\
\hline May occur within: & conventiondeclaration, dao, daoset, langmaterial, languagedeclaration, languageset, localtypedeclaration, maintenanceagency, physdescstructured, relation, source \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll}

```

\section*{\(<\) did \(>\) Descriptive Identification (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element that encloses information essential for identifying the material being described. \\
\hline May contain: & abstract, container, dao, daoset, didnote, head, langmaterial, materialspec, origination, physdescset, physdesc, physdescstructured, physloc, repository, unitdate, unitdatestructured, unitid, unittitle \\
\hline May occur within: & archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12 \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline \multirow[t]{3}{*}{Description and Usage:} & <did> binds together other elements that provide core information needed for identifying the described materials. \(<\) did \(>\) occurs in \(<\) archdesc \(>\) and \(<c>\), \(<\mathrm{c} 01>-<\mathrm{c} 12>\). The various \(<\mathrm{did}>\) child elements are intended for brief, clearly designated statements of information, whereas following sibling elements of \(<\) did > such as <custodhist>, <arrangement>, or \(<\) scopecontent \(>\) allow for more detailed, narrative description. \\
\hline & <did> groups elements that constitute a good basic description of an archival unit. This grouping ensures that the same data elements and structure are available at every level of description within the EAD hierarchy. It facilitates the retrieval or output of a coherent body of elements for resource discovery and recognition. \\
\hline & The <did> in <archdesc> is sometimes called the high-level < did>, because it covers the entirety of the materials described by the EAD instance. Consider using the following child elements in the high-level < did>: <origination>, <unittitle>, <unitdate> or <unitdatestructured>, <physdesc> or <physdescstructured>, < repository>, and \(<\) abstract \(>\). <unitid> and <physloc> are suggested if applicable to a repository's practice. \(<\) did \(>\) within \\
\hline
\end{tabular}
components can have fewer elements, and might have only <container> or <unitid> and <unittitle>.
Availability:

& Optional
\end{tabular} \\
\hline Description and Usage: & Use <editionstmt> to indicate the version of an EAD instance, as well as providing any related narrative information. Generally, a new edition of a finding aid represents substantial additions or changes and should supersede previous online versions. \\
\hline Availability: & Optional, not repeatable \\
\hline Example: & ```
<filedesc>
    <titlestmt>
        <titleproper>Register of the Emily Higby
        Collection</titleproper>
    </titlestmt>
    <editionstmt>
        <edition>2nd ed.</edition>
        <p>This edition reflects substantial
        additions to the collection in 1994.</p>
    </editionstmt>
</filedesc>
``` \\
\hline
\end{tabular}

\section*{<emph > Emphasis (Table of Contents)}
\(\left.\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { A formatting element for marking words or phrases } \\ \text { that are emphasized or specially formatted. }\end{array} \\ \text { [text], abbr, emph, expan, foreign, lb, ptr, ref }\end{array}\right\}\)

\section*{Example:} <abstract label="Abstract">Papers document Donald C. Stone's work with Ornstein and Swencionis on the <emph render="italic">est</emph> Outcome Project, and the development of his doctoral research, including his various publications on the human potential movement, up to the completion of his doctoral dissertation. </abstract>
< entry> Table Entry (Table of Contents)
\begin{tabular}{|c|c|c|}
\hline Summary: & \multicolumn{2}{|l|}{A formatting element that designates the contents of a cell in a table.} \\
\hline May contain: & \multicolumn{2}{|l|}{[text], abbr, corpname, date, emph, expan, famname, footnote, foreign, function, genreform, geogname, lb, list, name, num, occupation, persname, ptr, quote, ref, subject, title} \\
\hline May occur within: & \multicolumn{2}{|l|}{row} \\
\hline \multirow[t]{18}{*}{Attributes:} & align & Optional (values limited to: center, char, justify, left, right) \\
\hline & \multirow[t]{2}{*}{altrender audience} & Optional \\
\hline & & Optional (values limited to: external, internal) \\
\hline & \multirow[t]{5}{*}{\begin{tabular}{l}
char \\
charoff \\
colname \\
colsep
\end{tabular}} & Optional \\
\hline & & Optional \\
\hline & & Optional \\
\hline & & Optional (values \\
\hline & & limited to: false, true) \\
\hline & id & Optional \\
\hline & lang & Optional \\
\hline & morerows & Optional \\
\hline & nameend & Optional \\
\hline & namest & Optional \\
\hline & \multirow[t]{2}{*}{rowsep} & Optional (values \\
\hline & & limited to: false, true) \\
\hline & \multirow[t]{3}{*}{script valign} & Optional \\
\hline & & Optional (values \\
\hline & & limited to: bottom, middle, top) \\
\hline
\end{tabular}

Attribute usage: Three attributes are used together to force horizontal alignment on a specific character, such as a decimal point.

Description and In a table, a cell is the intersection of a row and a Usage: column. Attributes of <entry > control cell spanning, alignment of the contents, and the rules on the cell edges. The attributes can be specified for < entry> or inherited from the nearest of the following table
```
elements: <table>, <tgroup>, < colspec>,
<tbody>, <thead>, or < row >.
```

Availability: Required, repeatable
See also:
Related elements <colspec \(>\), < row \(>\), \(<\) table \(>\), \(<\) tbody \(>\), \(<\) tgroup \(>\), and \(<\) thead \(>\).

\section*{Example:}
```
<table frame="none">
    <tgroup cols="3">
        <colspec colnum="1" colname="1"
        align="left" colwidth="50pt"/>
        <colspec colnum="2" colname="2"
        align="left" colwidth="50pt"/>
        <colspec colnum="3" colname="3"
        align="left" colwidth="50pt"/>
        <thead>
            <row>
                    <entry colname="1"> Major Family
                Members</entry>
                <entry colname="2"> Spouses</entry>
                <entry colname="3"> Children</entry>
                </row>
        </thead>
        <tbody>
            <row>
                    <entry colname="1"> John Albemarle
                    (1760-1806) </entry>
                    <entry colname="2"> Mary Frances
                    Delaney (1769-1835) </entry>
                    <entry colname="3"> John Delaney
                    Albemarle (1787-1848) </entry>
            </row>
        [. . .] </tbody>
    </tgroup>
</table>
```
<event> Event (Table of Contents)
\begin{tabular}{|c|c|}
\hline Summary: & An element describing a happening or occurrence recorded within a chronology list. \\
\hline May contain: & [text], abbr, corpname, date, emph, expan, famname, footnote, foreign, function, genreform, geogname, lb, list, name, num, occupation, persname, ptr, quote, ref, subject, title \\
\hline May occur within: & chronitem, chronitemset \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use <event> within <chronitem> to pair a description of the event with one or more dates and an optional place. If one or more events occurred related to the date(s) in question or if more than one place is associated with the event, use <chronitemset > to bundle multiple <event>- or <geogname>elements. \\
\hline \multirow[t]{2}{*}{Availability:} & Within <chronitem > : Optional, not repeatable \\
\hline & Within <chronitemset> : Required, repeatable \\
\hline
\end{tabular}

\section*{Example:}
```

\section*{<eventdatetime> Event Date and Time (Table of}

Contents)
\begin{tabular}{|c|c|}
\hline Summary: & A required child element of < maintenanceevent > that records the date and time of a specific maintenance action for an EAD instance. \\
\hline May contain: & [text] \\
\hline May occur within: & maintenanceevent \\
\hline Attributes: & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& \begin{tabular}{l} 
limited to: external, \\
internal)
\end{tabular} \\
encodinganalog & Optional \\
id & Optional \\
lang & Optional \\
script & Optional \\
standarddatetime & Optional (must follow \\
& pattern based on ISO \\
& 8601 )
\end{tabular} \\
\hline Attribute usage: & Use @standarddatetime to provide a machineprocessable expression of the date or date and time, formulated according to the ISO 8601 standard. \\
\hline Description and Usage: & \(<\) eventdatetime \(>\) is for recording the date and time that a maintenance event occurred. Examples of maintenance events include the creation, update, revision, or other modification to an EAD instance. If desired, the date and time may be captured in natural language in the element. \\
\hline Availability: & Required, not repeatable \\
\hline References: & ISAD(G) 3.7.3 \\
\hline & MODS <recordCreationDate>, <recordChangeDate> \\
\hline
\end{tabular}

\section*{Example:}
```
<maintenancehistory>
    <maintenanceevent>
        <eventtype value="derived"/>
        <eventdatetime
        standarddatetime="2015-09-13T08:05:33-05:00">13

        <agent>Lisa Bolkonskaya</agent>
        <eventdescription>Minor revisions. Added
        sources.</eventdescription>
    </maintenanceevent>
</maintenancehistory>
```

\section*{<eventdescription> Event Description (Table of} Contents)
\begin{tabular}{lll} 
Summary: & \begin{tabular}{l} 
An optional child of < maintenanceevent \(>\), used to \\
provide a description of the maintenance activity.
\end{tabular} \\
May contain: & [text] & \\
May occur within: & maintenanceevent & \\
Attributes: & altrender & Optional \\
& audience & Optional (values \\
& & limited to: external, \\
& encodinganalog & internal) \\
& id & Optional \\
& lang & Optional \\
& localtype & Optional \\
& script & Optional
\end{tabular}

Attribute usage: Use @localtype if local practice requires recording the type of description.
\begin{tabular}{ll} 
Description and & \begin{tabular}{l} 
Use \(<\) eventdescription \(>\) to record a full description \\
of a maintenance event. Examples of maintenance \\
Usage:
\end{tabular} \\
& events include the creation, update, revision, or other
\end{tabular}

Availability: Optional, repeatable
See also:
Use the required <eventtype > to provide a basic categorization of the maintenance event.

\section*{Example:}
```
<maintenanceevent>
    <eventtype value="created"/>
    <eventdatetime
    standarddatetime="2006-10">0ctober
    2006</eventdatetime>
    <agenttype value="human"/>
    <agent>Michael Rush</agent>
Findmittel erstellt. Finding aid created.
</maintenanceevent>
```

\section*{<eventtype > Event Type (Table of Contents)}

\section*{Attribute usage:}

Description and Usage:
cancelled: marks an instance as not current (obsolete or rejected), but retained for reference
created: the initial creation of the EAD instance
deleted: indication that the instance has been deleted from the system
derived: indicates that the instance was derived from another descriptive system
revised: any type of general modification to the EAD instance
unknown: when the type of event is not known
updated: when an instance has been brought up to date with significant changes to the materials being described or to the version of EAD used

Use < eventtype> to indicate the type of maintenance events that have taken place on an EAD instance during the course of its history. In addition to commonly
```
occurring events such as the creation, update, or revision of an instance, you may also record activities such as the cancellation or deletion of an instance, as this information may be useful in shared systems.
Meanings for the required @value are:
```

Availability:

\section*{<expan > Expansion (Table of Contents)}
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
A phrase level element for designating the full form of \\
a word or phrase. \\
[text]
\end{tabular} \\
May contain: \\
May occur within: \\
abstract, addressline, archref, author, bibref, citation, \\
container, date, datesingle, didnote, dimensions, \\
edition, emph, entry, event, fromdate, head, head01, \\
head02, head03, item, label, materialspec, num, p, \\
part, physdesc, physfacet, physloc, publisher, quote, \\
ref, sponsor, subtitle, titleproper, todate, unitdate, \\
unitid, unittitle \\
abbr \\
altrender \\
audience
\end{tabular}\(\quad\)\begin{tabular}{l} 
Optional
\end{tabular}
<famname > Family Name (Table of Contents)Summary: An element for identifying the name of a group ofpeople with blood relations, or persons who form ahousehold.
May contain: part
May occur within: abstract, archref, bibref, controlaccess, entry, event,
indexentry, item, namegrp, origination, p, physfacet,
ref, repository, unittitle

\section*{Attributes:}
Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.
Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the family in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.
Use @localtype, if local practice requires specification of the type of family name.
Use @normal to identify a standardized form of the family name if not provided in the element itself.
Use @relator to specify, either as a URI or a string, other relationship(s) the family name has to the described materials, for example, "compiler," "creator," "collector," or "subject." The schema does not limit
possible values of @relator, but an institution could define and enforce values elsewhere if desired.

\section*{Description and Usage:}

An element for identifying the name of a group of persons closely related by blood or persons who form a household, and are related to the materials being described. Includes single families and family groups, e.g., Patience Parker Family and Parker Family.
<famname> must contain one or more <part> elements. A single < part> may be used for the entire string, or if more granularity is desired, multiple <part> elements may be used to capture each component of the family name, e.g.,

Part 1: Butts family
Part 2: 1810
Part 3: Long Beach, CA
Use < famname > within <controlaccess> for encoding family names as defined by controlled vocabularies or according to appropriate rules. You may also use <famname> for encoding family names as they appear within text.
Within <indexentry > : Optional, not repeatable Within all other elements: Optional, repeatable
References:
Examples:

MARC 600, 700
<controlaccess>
<famname> <part>Butts family</part> <part>1810</part> <part>Long Beach, CA</part> </famname> <famname relator="collector"> <part>Smith family</part> </famname>

<filedesc>
    <titlestmt>
        <titleproper>Register of the Emily Higby
        Collection</titleproper>
    </titlestmt>
    <editionstmt>
        <edition>2nd ed.</edition>
        <p>This edition reflects substantial
        additions to the collection in 1994.</p>
    </editionstmt>
</filedesc>
```

\section*{<fileplan > File Plan (Table of Contents)}
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
An element for information about any classification \\
scheme used by the original creator to arrange, store, \\
and retrieve the materials described.
\end{tabular} \\
May contain: & \begin{tabular}{l} 
blockquote, chronlist, fileplan, head, list, p, table
\end{tabular} \\
May occur within: & \begin{tabular}{l} 
archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, \\
c10, c11, c12, fileplan
\end{tabular} \\
Attributes: & \begin{tabular}{ll} 
altrender \\
audience & Optional
\end{tabular} \\
& \\
& encodinganalog \\
id & Optional (values \\
lang & limited to: external, \\
internal)
\end{tabular}
Description and
Usage:

Availability:
See also:

A filing plan is usually identified by the type of system used, e.g., alphabetical, numerical, alpha-numerical, decimal, color-coded, etc. It is often hierarchical and may include the filing guidelines of the originating entity. Additional types include a drawing of a room layout or a scientific scheme.

Optional, repeatable
Do not confuse with < arrangement>, which describes the current organization and/or filing sequence of the materials, as opposed to that imposed by the original creator.

Do not confuse with < otherfindaid \(>\), which contains references to additional descriptions of the material rather than descriptions of classification schemes by which the materials might still be arranged.

\section*{Example:}
```
    to primary subjects and to secondary and
    tertiary subdivisions thereunder.</p>
    <fileplan>
        <head>AGRICULTURE (AG)</head>
        <list listtype="ordered"
        numeration="arabic">
            <item>Home Economics</item>
            <item>Horticulture</item>
            <item>Marketing</item>
            <item>Price Support</item>
        </list>
        </fileplan>
        <fileplan>
            <head>ARTS (AR)</head>
            <list listtype="ordered"
            numeration="arabic">
            <item>Languages</item>
            <item>Museums</item>
            <item>Music</item>
        </list>
    </fileplan>
</fileplan>
```
\begin{tabular}{|c|c|}
\hline < footnote> & Footnote (Table of Contents) \\
\hline Summary: & An element used to cite the source of a fact, quotation, etc. \\
\hline May contain: & blockquote, chronlist, list, p, table \\
\hline May occur within: & abstract, archref, bibref, entry, event, item, p, physfacet, ref, unittitle \\
\hline \multirow[t]{9}{*}{Attributes:} & \begin{tabular}{ll} 
actuate & \begin{tabular}{l} 
Optional (values \\
limited to: none, \\
onload, onrequest, \\
other)
\end{tabular}
\end{tabular} \\
\hline & altrender Optional \\
\hline & \begin{tabular}{ll} 
audience & Optional (values \\
& limited to: external, \\
internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline & show Optional (values \\
\hline & limited to: embed, new, none, other replace) \\
\hline \multirow[t]{2}{*}{Attribute usage:} & Use @actuate to specify how the footnote is to be displayed to a user, whether on loading of a window, on request by the user, other, or none. \\
\hline & Use @show to specify how the source information is to appear after a user requests (clicks on) the footnote, whether embedded in the current window, replacing the current window, in a new window, other, or none. \\
\hline Description and & Use \(<\) footnote \(>\) to annotate text to indicate the basis \\
\hline Usage: & for an assertion or citing the source of a quotation or other information. \\
\hline Availability: & Optional, repeatable \\
\hline Example: & \begin{tabular}{l}
<scopecontent> \\
<head>Scope and Content</head> \\
<p>In letters from the spring of 1924, \\
Lawrence outlines the adjustments the family
\end{tabular} \\
\hline
\end{tabular}
faced when moving from New York City to Badger, Iowa.
<footnote>
<p>Letters \#42, \#45, \#47-54</p> </footnote>
In particular, the children had difficulty in their new classroom settings. Lawrence notes "Sally cried again tonight because, unlike the children who have attended this school their entire lives, she cannot concentrate on sums while the instructor quizzes older children about geography." <footnote> <p>Letter \#48</p> </footnote>
The family only remained six months in Badger before moving again to Des Moines.</p>
[. . .] </scopecontent>

\section*{\(<\) foreign \(>\) Foreign (Table of Contents)}

Attribute usage: Use @lang to indicate the language and @script to identify the script of the encoded text.

Use @render to specify formatting of the encoded text for display and print purposes.

Description and
Usage:
Use < foreign > to indicate a language and/or script that differs from that of the text surrounding it. Use \(<\) foreign > if you wish to render or otherwise process such text. For example, encoding a phrase as <foreign> and including the script attributes allows
machine to process the script differently than that of the script around it.
\begin{tabular}{|c|c|}
\hline Availability: & Optional, repeatable \\
\hline \multirow[t]{15}{*}{Examples:} & <bibref> \\
\hline & \begin{tabular}{l}
<foreign lang="lat"> Arcana mundi </foreign> \\
: magic and the occult in the Greek and Roman
\end{tabular} \\
\hline & worlds : a collection of ancient texts / \\
\hline & translated, annotated, and introduced by Georg \\
\hline & Luck. Baltimore : Johns Hopkins University \\
\hline & Press, c1985. </bibref> \\
\hline & <bioghist> [. . .] \\
\hline & <p>Thanatos ( \\
\hline & <foreign lang="grc" script="Grek"> Өávatos \\
\hline & </foreign> \\
\hline & ) was the personification of death. He was \\
\hline & a minor figure in Greek mythology, often \\
\hline & referred to, but rarely appearing in person. \\
\hline & </p> \\
\hline & [. . .] </bioghist> \\
\hline
\end{tabular}
\begin{tabular}{|c|c|}
\hline < fromdate \(>\) & From Date (Table of Contents) \\
\hline Summary: & An optional child element of <daterange \(>\) that records the starting point in a range of dates. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & daterange \\
\hline \multirow[t]{8}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & notafter Optional \\
\hline & notbefore Optional \\
\hline & script Optional \\
\hline & standarddate Optional \\
\hline \multirow[t]{3}{*}{Attribute usage:} & Use @localtype to supply a more specific characterization of the start date. \\
\hline & Use @notafter and @notbefore to capture the earliest and latest possible dates in machine-processable form in cases when the date is uncertain. \\
\hline & Use @standarddate to provide a machine-processable form of the date. \\
\hline Description and Usage: & Use < fromdate > to record the beginning date in a range of dates. \(<\) fromdate \(>\) may contain actual or approximate dates. The content of the element is intended to be a human-readable, natural language expression of the date. If, however, indexing or other machine processing of dates is desired, the @standarddate should be used to record the date in machine-processable form as well. \\
\hline Availability: & Optional, not repeatable \\
\hline See also: & Use \(<\) todate \(>\) to record the ending point of a date range. \\
\hline
\end{tabular}

\section*{Examples:}

            <event>Enlisted in Civilian
            Public Service as a conscientious
            objector.</event>
            <event>Served at CPS Camp No. 24,
            subunit 4 in Clear Spring, Maryland.
            Constructed fences to conserve soil,
            practiced specialized tilling, and
            dug water diversion ditches. Fought
            occasional forest fires.</event>
        </chronitemset>
    </chronitem>
</chronlist>
```

\section*{\(<\) head02> Second Heading (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A formatting element for the second facet heading in a multifacet list. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & listhead \\
\hline \multirow[t]{4}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use \(<\) head \(02>\) within \(<\) listhead \(>\) if needed to designate the heading over the second facet in a multifacet list. \\
\hline Availability: & Optional, not repeatable \\
\hline See also: & Do not confuse with the generic \(<\) head \(>\), which designates a heading for an entire list or other section of text. \\
\hline Example: & ```
<chronlist>
    <listhead>
        <head01>Date(s)</head01>
        <head02> Location(s) </head02>
        <head03>Event(s)</head03>
    </listhead>
[. . .] </chronlist>
``` \\
\hline
\end{tabular}
\(<\) head03 \(>\) Third Heading (Table of Contents)
\begin{tabular}{|c|c|}
\hline Summary: & A formatting element for the third facet heading in a multifacet list. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & listhead \\
\hline \multirow[t]{6}{*}{Attributes:} & altrender Optional \\
\hline & audience Optional (values \\
\hline & limited to: external, internal) \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline
\end{tabular}

Description and
Usage:
Availability:
See also:

Use \(<\) head03 \(>\) within < listhead \(>\) to provide a heading over the third facet in a multifacet list.

Optional, not repeatable
Do not confuse with the generic <head \(>\), which designates a heading for an entire list or other section of text.
```
<chronlist>
    <listhead>
        <head01>Date(s)</head01>
        <head02> Location(s) </head02>
        <head03>Event(s)</head03>
    </listhead>
[. . .] </chronlist>
```

\section*{\(<\) index \(>\) Index (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A list of key terms and entities with reference pointers assembled to enhance navigation of and access to the materials being described. \\
\hline May contain: & blockquote, chronlist, head, index, indexentry, list, listhead, p, table \\
\hline May occur within: & archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, index \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & <index> can serve as a helpful alphabetical overview of subjects, correspondents, photographers, or other entities represented in the collection. It may provide hypertext links to the components referenced, or it may simply note the container numbers useful for locating the position in the finding aid where the indexed material appears. \\
\hline & The index may repeat terms and names found elsewhere in the finding aid or list names not previously identified. For example, an index of correspondents may list "Chilsolm, Shirley" with a reference pointing to a file with the general name "Correspondence, 1969-1975." Use <indexentry> to capture each item in the \(<\) index \(>\). \\
\hline Availability: & Optional, repeatable \\
\hline Example: & \begin{tabular}{l}
<archdesc level="fonds"> \\
<did>[. . .]</did> \\
<scopecontent>[...]</scopecontent> \\
<index> \\
<head>Photographer Index</head> \\
<p>Names of photographers and studios-and the cities and states in which they operated--are usually noted as they appear on the photographs (usually stamped or written on the versos). Corporate names appear in direct order; personal names in
\end{tabular} \\
\hline
\end{tabular}
```
        inverted order (i.e., filed by surname).
        Rectos and versos of photographs were
        microfilmed to capture information exactly
        as it appears on the photographs. To
        locate a specific photographer/studio, a
        user should consider all possible forms
        of entry (corporate and personal), browse
        the index under these forms, identify
        which LOT(s) contain photographs by
        that photographer/studio, then browse
        the relevant LOT on the microfilm to
        locate specific photographs that bear the
        markings of the specific photographer/
        studio.</p>
        <indexentry>
            <name>
                    <part>12th Air Force Photo</part>
            </name>
            <ref target="LOT13105"
            actuate="onrequest" show="replace">LOT
            13105</ref>
        </indexentry>
        <indexentry>
            <name>
                            <part>15th Air Force Command:</part>
            </name>
            <ref target="LOT13105"
            actuate="onrequest" show="replace">LOT
            13105</ref>
        </indexentry>
    </index>
</archdesc>
```

\section*{<indexentry> Index Entry (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element that pairs an index term with zero or more linking elements. \\
\hline May contain: & corpname, famname, function, genreform, geogname, indexentry, name, namegrp, occupation, persname, ptr, ptrgrp, ref, subject, title \\
\hline May occur within: & index, indexentry \\
\hline \multirow[t]{4}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline \multirow[t]{2}{*}{Description and Usage:} & Each <indexentry> must contain an access element, such as <corpname>, <persname>, < subject>, etc., or \(<\) namegrp \(>\) to handle multiple access elements. It may also contain \(<\) ref \(>,<\operatorname{ptr}>\), or \(<\) ptrgrp \(>\) to identify and/or provide a link to the relevant position in the finding aid. If desired, use controlled vocabulary terms to facilitate access to information within and across finding aid systems. \\
\hline & Use the child <namegrp \(>\) to bundle access element entries, e.g., several <famname > and <persname > elements that share the same \(<\mathrm{ref}>,<\mathrm{ptr}>\), or <ptrgrp>. \\
\hline Availability: & Optional, repeatable \\
\hline \multirow[t]{8}{*}{Example:} & <index> \\
\hline & <indexentry> <name> \\
\hline & <part>12th Air Force Photo</part> \\
\hline & \begin{tabular}{l}
<ref target="LOT13105" actuate="onrequest" \\
show="replace">LOT 13105</ref> \\
</indexentry>
\end{tabular} \\
\hline & <indexentry> \\
\hline & \begin{tabular}{l}
<name> \\
<part>15th Air Force Command:</part> \\
</name>
\end{tabular} \\
\hline & <ref target="LOT13105" actuate="onrequest" show="replace">LOT 13105</ref> \\
\hline & \begin{tabular}{l}
</indexentry> \\
</index>
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|}
\hline \multicolumn{2}{|l|}{\(<\) item \(>\) Item (Table of Contents)} \\
\hline Summary: & An element used in either < list > or as part of \(<\) defitem \(>\). \\
\hline May contain: & [text], abbr, corpname, date, emph, expan, famname, footnote, foreign, function, genreform, geogname, lb, list, name, num, occupation, persname, ptr, quote, ref, subject, title \\
\hline May occur within: & defitem, list \\
\hline \multirow[t]{4}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Description and Usage: & An element used in two contexts: as an entry in a simple, random, or ordered < list> or as part of \(<\) defitem \(>\) inside a definition list. In the first instance, <item> can be a number, word, or phrase. In a definition list, which is usually displayed as two columns, <defitem> pairs <label> with a corresponding <item \(>\) containing text that defines, describes, or explains the terms or other text tagged as \(<\) label>. \\
\hline \multirow[t]{2}{*}{Availability:} & Within <defitem>: Required, not repeatable \\
\hline & Within <list>: Optional, repeatable \\
\hline \multirow[t]{2}{*}{See also:} & Do not confuse with <chronitem \(>\), which designates entries in <chronlist>. \\
\hline & Related elements < list> and < defitem>. \\
\hline
\end{tabular}
```
<list listtype="unordered" mark="circle">
    <head>List of ministers of May Memorial
    Unitarian Universalist Church</head>
    <item> John Storer, Minister 1839-1844
    </item>
    <item> Samuel Joseph May, Minister 1845-1868
    </item>
    <item> Samuel R. Calthrop, Minister
    1868-1911 </item>
    <item> John H. Applebee, Minister 1911-1929
    </item>
    <item> Waldemar W. Argow, Minister 1930-1941
    </item>
    <item> Robert E. Romig, Minister 1941-1946
    </item>
    <item> Glenn O. Canfield, Minister 1946-1952
    </item>
    <item> John Fuller, Minister, 1961-1973
    </item>
</list>
<list listtype="deflist">
    <defitem>
        <label>ALS</label>
        <item> Autograph Letter Signed </item>
    </defitem>
    <defitem>
        <label>TLS</label>
        <item> Typewritten Letter Signed </item>
    </defitem>
</list>
```
\begin{tabular}{|c|c|}
\hline Summary: & A required child element of \(<\) defitem \(>\) that identifies the term or concept being defined or described. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & defitem \\
\hline \multirow[t]{4}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Description and Usage: & In a definition list, \(<\) label \(>\) and \(<\) item \(>\) are paired within \(<\) defitem \(>.<\) label \(>\) provides a term or concept that is then defined, described, or explained in an \(<\) item \(>\). A definition list is often displayed in two columns. \\
\hline Availability: & Required, not repeatable \\
\hline See also: & Do not confuse with @label, available on children of <did>, which allows the encoder to provide identifying information for public display. \\
\hline Example: & ```
<list listtype="deflist">
    <defitem>
        <label>ALS</label>
        <item>Autograph Letter Signed</item>
    </defitem>
    <defitem>
        <label>TLS</label>
        <item>Typewritten Letter Signed</item>
    </defitem>
</list>
``` \\
\hline
\end{tabular}

\section*{\(<\) langmaterial > Language of the Material (Table of}

Contents)
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
A child element of \(<\) did \(>\) that identifies languages \\
represented in the materials described.
\end{tabular} \\
May contain: & descriptivenote, language, languageset \\
May occur within: & did \\
Attributes: & altrender \\
& audience \\
& \\
& encodinganalog \\
id & Optional \\
& Optional (values \\
label & limited to: external, \\
& internal) \\
lang & Optional \\
& Script
\end{tabular}

Attribute usage: Use @lang and @scriptto indicate the language and written scripts of the descriptive information, not the language of materials.

Use @langcode in the < language > child element to record the language of the material using language codes.

Use @scriptcode in the < script> child element to record the script of the material using script codes.

Description and
Usage:

Availability:
See also:
<langmaterial> records information about languages and scripts represented in the materials being described. < langmaterial > must contain one or more <language> or <languageset> elements, but cannot contain text.

Any comments or notes about languages or scripts represented in the materials described must be encoded in an optional <descriptivenote \(>\) that follows all \(<\) language \(>\) and <languageset \(>\) elements.

Optional, repeatable
Do not confuse with < languagedeclaration \(>\) in \(<\) control \(>\), which specifies the language(s) and script(s) in which the finding aid is written. See also the descriptions for <language \(>\) and \(<\) languageset \(>\).

## <languagedeclaration> Language Declaration

(Table of Contents)

| Summary: | A child element of $<$ control $>$ that indicates the language and script in which an EAD instance is written. |
| :---: | :---: |
| May contain: | descriptivenote, language, script |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | Use < languagedeclaration $>$ to identify the language and script of an EAD instance with required <language> and <script> children. When the archival description is in a single language or it is the maintenance agency's policy to declare a primary language, then a single instance of <languagedeclaration > may be used. For declaring multiple languages, < languagedeclaration> may be repeated. Any comments about the languages and scripts in which the EAD instance is written may be included in the optional < descriptivenote $>$. |
|  | The prescribed order of all child elements (both required and optional) is: |
|  | <language> |
|  | < script> |
|  | <descriptivenote> |

| Availability: | Optional, repeatable |
| :--- | :--- |
| See also: | Do not confuse with <langmaterial $>$, which is used <br> to identify languages and scripts found in the materials <br> being described. |

## Example:

```
<control>
    <maintenanceagency>
        <otheragencycode
        localtype="archon">GB-58</otheragencycode>
        <agencyname>British Library</agencyname>
    </maintenanceagency>
    <languagedeclaration>
        <language
        langcode="eng">English</language>
        <script scriptcode="Latn">Latin</script>
    </languagedeclaration>
    <maintenancehistory>
        <maintenanceevent>
            <eventtype value="derived"/>
            <eventdatetime
                standarddatetime="2013-04-20T16:19:24Z"/
                >
                <agenttype
                value="machine">machine</agenttype>
                <agent>IAMS</agent>
        </maintenanceevent>
    </maintenancehistory>
</control>
```

## <languageset> Language Set (Table of Contents)

| Summary: | Within <did>, < languageset> is a child element of $<$ langmaterial $>$ that is used to pair languages with the scripts in which they are written. |
| :---: | :---: |
| May contain: | descriptivenote, language, script |
| May occur within: | langmaterial |
| Attributes: | altrender Optional <br> audience Optional (values limited to: external, internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | Use <languageset> within <langmaterial> when it is necessary to associate $<$ language $>$ and $<$ script $>$. Possible combinations include one language and one script, multiple languages and one script, and one language and multiple scripts. Although the EAD3 schema allows multiple languages to be associated with multiple scripts this combination is unlikely to convey useful information. <languageset> may be repeated as necessary. Optionally, any comments about the language(s) and scripts(s) being recorded may be captured in <descriptivenote > at the end, particularly for display to finding aid users. |
|  | Attribute notes: |
|  | Use @lang and @script to indicate the language and written scripts of the descriptive information, not the language of materials. |
| Availability: | Optional, repeatable |
| See also: | Required child element < language > |
|  | Required child element < script> |

## Examples:

```
<langmaterial>
    <languageset>
        <language langcode="lat">Latin</language>
        <script scriptcode="Latn"/>
    </languageset>
    <languageset>
        <language langcode="ang">Old
        English</language>
        <script scriptcode="Latn"/>
    </languageset>
    <languageset>
        <language
        langcode="eng">English</language>
        <script scriptcode="Latn"/>
    </languageset>
    <descriptivenote>

| $<$ list $>$ List | le of Contents) |
| :---: | :---: |
| Summary: | A wrapper element for formatting a series of $<$ item $>$ or $<$ defitem $>$ elements that are often presented in a vertical sequence. |
| May contain: | defitem, head, item, listhead |
| May occur within: | accessrestrict, accruals, acqinfo, altformavail, appraisal, arrangement, bibliography, bioghist, blockquote, controlaccess, controlnote, custodhist, dsc, entry, event, fileplan, footnote, index, item, legalstatus, odd, originalsloc, otherfindaid, p, phystech, prefercite, processinfo, relatedmaterial, scopecontent, separatedmaterial, userestrict |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | id Optional |
|  | lang Optional |
|  | listtype Optional (values <br>  limited to: deflist, <br> ordered, unordered)  |
|  | mark Optional (values <br>  limited to: circle, disc, <br> inherit, none, square)  |
|  | numerationOptional (values <br> limited to: armenian, <br> decimal, decimal- <br> leading-zero, georgian, <br> inherit, lower-alpha, <br> lower-greek, lower- <br> latin, lower-roman, <br> upper-alpha, upper- <br> latin, upper-roman) |
|  | script Optional |
| Attribute usage: | Use @listtype to identify and format the list as a particular type. The choices are: "deflist," "ordered," and "unordered." |
| Description and Usage: | A formatting element that contains a series of words or numerals (called $<$ item $>$ s) separated from one another and arranged in a linear, often vertical sequence. |

## Availability:

See also:

## Examples:

 Optional, repeatableDo not confuse with < chronlist>, which is used to designate the temporal sequence of significant events associated with the entity or material described.

```
<list listtype="unordered" mark="circle">
    <head>List of ministers of May Memorial
    Unitarian Universalist Church</head>
    <item>John Storer, Minister 1839-1844</item>
    <item>Samuel Joseph May, Minister
    1845-1868</item>
    <item>Samuel R. Calthrop, Minister
    1868-1911</item>
    <item>John H. Applebee, Minister
    1911-1929</item>
    <item>Waldemar W. Argow, Minister
    1930-1941</item>
    <item>Robert E. Romig, Minister
    1941-1946</item>
    <item>Glenn O. Canfield, Minister
    1946-1952</item>
    <item>John Fuller, Minister,
    1961-1973</item>
</list>
<list listtype="deflist">
    <defitem>
        <label>ALS</label>
        <item>Autograph Letter Signed</item>
    </defitem>
    <defitem>
            <label>TLS</label>
            <item>Typewritten Letter Signed</item>
    </defitem>
</list>
<processinfo>
    <p>The following items were removed during
    processing due to irrecoverable mold damage.
    Photographs were taken and placed in the
    collection for reference purposes.
        <list listtype="ordered"
        numeration="lower-alpha">
            <item>Correspondence from Feb 1987 (6
            items)</item>
            <item>Three photographs of unidentified
            cats</item>
            <item>One silk scarf</item>
        </list>
    </p>
</processinfo>
```

| < listhead > | List Heading (Table of Contents) |
| :---: | :---: |
| Summary: | An element for grouping several headings for faceted lists. |
| May contain: | head01, head02, head03 |
| May occur within: | chronlist, index, list |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | A formatting element that groups headings for different facets in a definition list ( < list listtype = "deflist" > ) , $<$ chronlist $>$, or $<$ index $>$. The headings are called $<$ head01 $>,<$ head02 $>$, and $<$ head03 $>$ and are available in that sequence, although each is optional. |
| Availability: | Optional, not repeatable |
| See also: | Do not confuse with <head>, which designates a title or caption for a section of text where columnar headings are not needed. |
|  | Do not confuse with $<$ thead $>$, which is used in $<$ table $>$. |
|  | Do not use $<$ head03 $>$ within a definition list ( $<$ list listtype $=$ "deflist" $>$ ). A definition list can only have two facets for the <label> and <item> elements within $<$ defitem $>$. |

## Example:

```
<chronlist>
    <head>Publications List</head>
    <listhead>
        <head01>Publication Year</head01>
        <head02>Book Title</head02>
    </listhead>
    <chronitem>
        <datesingle>1882</datesingle>
        <event>
            <title>
                    <part>Across the Sea in a
                    Sieve.</part>
                </title>
        London: Jos. Banks.</event>
    </chronitem>
    <chronitem>
        <datesingle>1886</datesingle>
        <event>
            <title>
                    <part>My Life and Other
                    Tragedies.</part>
                </title>
        London: Chatto and Windus.</event>
    </chronitem>
</chronlist>
```

## $<$ localcontrol $>$ Local Control (Table of Contents)

| Summary: | A child element of <control $>$, used to specify any <br> control information necessary to accommodate local <br> practice. |  |
| :--- | :--- | :--- |
| May contain: | daterange, datesingle, term |  |
| May occur within: | control |  |
| Attributes: | altrender | audience |
|  | encodinganalog | Optional |
|  | Optional (values |  |
|  | limited to: external, |  |
|  | lang | internal) |
|  | Optional |  |
|  | localtype | Optional |
|  | script | Optional |
|  |  | Optional |
|  | Optional |  |

Attribute usage: Use @localtype if local practice requires recording the type of entry.

Description and Administrative information about an EAD instance that Usage:

Availability: Optional, repeatable

## Examples:

```
<control> [. . .]
    <languagedeclaration>
        <language
        langcode="eng">English</language>
        <script scriptcode="Latn">Latin</script>
    </languagedeclaration>
    <localcontrol localtype="levelofdetail">
        <term>Minimum</term>

</localcontrol>
<localcontrol localtype="maxComponentID">
    <term>414</term>
</localcontrol>
<localcontrol localtype="processinglevel">
    <term>item</term>
</localcontrol>
```

## <localtypedeclaration> Local Type Declaration

(Table of Contents)

| Summary: | A child element of $<$ control $>$ used to declare any local conventions or controlled vocabularies used in @localtype in the EAD instance. |
| :---: | :---: |
| May contain: | abbr, citation, descriptivenote |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | <localtypedeclaration > specifies the local conventions and controlled vocabularies used in localtype attributes in the EAD instance. The child <citation > must be used to cite the resource that lists the local rules or controlled terms. Any notes relating to how these rules or conventions have been used may be given in $<$ descriptivenote $>$. The child <abbr> may be used to identify any abbreviation or code representing the local convention or controlled vocabulary. |
|  | It may not be necessary to include <localtypedeclaration> if @localtype values are documented externally. |
|  | The prescribed order of all child elements (both required and optional) is: |
|  | <abbr> |
|  | <citation> |
|  | <descriptivenote> |
| Availability: | Optional, repeatable |

## Examples:

```
<control> [. . .]
    <conventiondeclaration>
                <abbr>ISAD(G)</abbr>
                <citation>ISAD(G): General International
                Standard Archival Description, second
                edition, Ottawa 2000</citation>
    </conventiondeclaration>
    <localtypedeclaration>
        <citation>IAMS Catloguing Guidelines
        Part 1: Describing Archives and
        Manuscripts</citation>
    </localtypedeclaration>
    <localcontrol localtype="levelofdetail">
        <term>Minimum</term>
    </localcontrol>
[. . .] </control>
<localtypedeclaration>
    <abbr>PM-AMC</abbr>
    <citation>Processing manual for archival and
    manuscript collections</citation>
    <descriptivenote>
        <p>This finding aid conforms to the
        standards of description outlined in the
        seventh section of the university's
            <title>
                <part>Processing manual for archival
                    and manuscript collections</part>
                </title>
            </p>
    </descriptivenote>
</localtypedeclaration>
```

## <maintenanceagency> Maintenance Agency

(Table of Contents)

| Summary: | A required child element of <control> that identifies the information or service responsible for the EAD instance. |
| :---: | :---: |
| May contain: | agencycode, agencyname, descriptivenote, otheragencycode |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | countrycode Optional |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Attribute usage: | Use @countrycode to indicate a unique code for the country of the maintenance agency. |
| Description and Usage: | Information about the institution or service responsible for the creation, maintenance, and/or dissemination of the EAD instance. |
|  | <maintenanceagency > must include a child <br> <agencyname> to provide the name of the institution or service. It is recommended to include the optional <agencycode> and/or <otheragencycode > children to unambiguously identify the institution or service. Any general information about the institution in relation to the EAD instance may be given in $<$ descriptivenote $>$. |
|  | The prescribed order of all child elements (both required and optional) is: |
|  | <agencycode> |
|  | <otheragencycode> |
|  | <agencyname> |
|  | <descriptivenote> |

## Availability:

Required, not repeatable

## See also:

Examples:

```
<control> [. . .]
    <maintenancestatus value="derived"/>
    <maintenanceagency>

[. . .] </control>
```

## <maintenanceevent> Maintenance Event (Table of

 Contents)| Summary: | A required child element of <maintenancehistory> used to record information about maintenance activities in the history of the EAD instance. |
| :---: | :---: |
| May contain: | agent, agenttype, eventdatetime, eventdescription, eventtype |
| May occur within: | maintenancehistory |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | Use < maintenanceevent > to record an activity in the creation and ongoing maintenance of an EAD instance, including revisions, updates, deletions, etc. There will always be at least one maintenance event for each instance, which will typically be its creation. |
|  | The type of each event must be defined in the child <eventtype > . The child <agent> and <agenttype> elements are required to provide information about who or what carried out, or was otherwise responsible for, the work on the EAD instance. The child <eventdatetime > is also required to record when the event took place. Optionally, the information about the event may be described further in <eventdescription>. |
|  | The prescribed order of all child elements (both required and optional) is: |

```
< eventtype>
<eventdatetime>
<agenttype>
<agent>
```

## <maintenancehistory> Maintenance History

(Table of Contents)

| Summary: | A required child element of $<$ control $>$ that captures the history of the EAD instance. |
| :---: | :---: |
| May contain: | maintenanceevent |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | <maintenancehistory > is for recording the history of the creation, revisions, updates, and other modifications to the EAD instance. There must be at least one child $<$ maintenanceevent $>$ in $<$ maintenancehistory $>$, which usually will be a record of the creation of the instance, but there may be many other < maintenanceevent > elements documenting the milestone changes or activities in the maintenance of the instance. |
| Availability: | Required, not repeatable |

## Examples:

```
<maintenancehistory>

## $<$ materialspec $>$ Material Specific Details (Table of

 Contents)| Summary: | A child elementof $<$ did $>$ for providing material specific details for a small group of materials or an item. |
| :---: | :---: |
| May contain: | [text], abbr, emph, expan, foreign, lb, ptr, ref |
| May occur within: | did |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | label Optional |
|  | lang Optional |
|  | localtype <br> Optional |
|  | script Optional |
| Attribute usage: | Use @localtype to specify the type of data being conveyed in the element, e.g., <materialspec localtype $=$ "scale" $>1: 200</$ materialspec $>$. |
| Description and Usage: | $<$ materialspec $>$ is for recording material specific details that are unique to a particular class or form of material and which are not recorded in any other element of description. Examples of material specific details include mathematical data, such as scale for cartographic and architectural records, jurisdictional and denominational data for philatelic records, and presentation data that describes the format of music manuscripts. |
|  | Most likely <materialspec> will be useful at the item or small group level of description, such as a file of maps, a group of sound recordings, etc. |
| Availability: | Optional, repeatable |
| References: | MARC 254, 255 |
|  | MODS < subject> < cartographics> <projection>, <subject> <cartographics> <scale> |

## Examples:

```
<c03 level="file">
    <did> [ . . .]
            <materialspec label="Scale:"
            localtype="scale"> 1:10000 </materialspec>
            <materialspec label="Projection:"
            localtype="projection"> Universal
            transverse Mercator projection
            </materialspec>
    [ . . .] </did>
</c03>
<c02>
    <did>
            <unittitle>Rebecca (Selznick International
            Pictures)</unittitle>
            <abstract>Autograph conductor's full
            score (pencil), with mimeographed
            conductor's short score of certain
            sections interleaved. Selections,
            including deletions.</abstract>
            <unitdate unitdatetype="inclusive"
            normal="1940">1940</unitdate>
            <materialspec> Full score. </materialspec>
        </did>
</c02>
```

## <name> Generic Name (Table of Contents)

| Summary: | An element for encoding generic names. |  |
| :--- | :--- | :--- |
| May contain: | part |  |
| May occur within: | abstract, archref, bibref, controlaccess, entry, event, <br> indexentry, item, namegrp, origination, p, physfacet, <br>  <br> ref, repository, unittitle |  |
| Attributes: | altrender | Optional |
|  | audience | Optional (values |
|  |  | limited to: external, |
|  | encodinganalog | internal) |
|  | id | Optional |
|  | identifier | Optional |
|  | lang | Optional |
|  | localtype | Optional |
|  | normal | Optional |
|  | relator | Optional |
|  | rules | Optional |
|  | script | Optional |
|  | source | Optional |

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the name in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local practice requires specification of the type of name.

Use @normal to identify a standardized form of the name if not provided in the element itself.

Use @relator to specify, either as a URI or a string, other relationship(s) the name has to the described materials, for example "subject" or "photographer." The schema does not limit possible values of @relator, but an institution could define and enforce values elsewhere if desired.

| Description and Usage: | The proper noun or noun phrase designation for an entity that is difficult to tag more specifically as <corpname>, <famname>, <geogname>, or <persname>. < name> may be used in place of the more specific access elements when it is not known what kind of name is being described or when a higher degree of precision is unnecessary. For example, <name> might be used in an <indexentry> when it is not clear if the name "Bachrach" refers to a person or a photographic corporation. <br> <name> must contain one or more <part> elements. A single < part > may be used for the entire string, or if more granularity is desired, multiple < part > elements may be used to capture each component of the name. |
| :---: | :---: |
| Availability: | Within <indexentry > : Optional, not repeatable Within all other elements: Optional, repeatable |
| References: | MARC 720 <br> MODS < name> |
| Example: | ```<controlaccess> <name encodinganalog="610" rules="RDA"> <part>Winwood</part> </name> </controlaccess>``` |

## < namegrp > Name Group (Table of Contents)

| Summary: | An element for binding together multiple access element entries within an <indexentry>. |
| :---: | :---: |
| May contain: | corpname, famname, function, genreform, geogname, name, occupation, persname, subject, title |
| May occur within: | indexentry |
| Attributes: | altrender Optional |
|  | audience Optional (values |
|  | limited to: external, internal) |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | Use < namegrp> to group multiple access elements that share the same $<$ ref $>,<\operatorname{ptr}>$, or $<$ ptrgrp $>$. |
| Availability: | Optional, not repeatable |

## Example:

```
<archdesc level="collection">
    <did>[...]</did>
    <scopecontent>[...]</scopecontent>
    <index>
        <head>Correspondent Index</head>
        <indexentry>
            <namegrp>
                                    <persname>
                                    <part
                                    localtype="lastname">Bach</part>
                                    <part localtype="firstname">Johan
                                    Sebastian</part>
                </persname>
                <persname>
                                    <part
                                    localtype="lastname">Bach</part>
                                    <part localtype="firstname">Carl
                                    Philipp Emanuel</part>
                </persname>
                <persname>
                                    <part
                                    localtype="lastname">Bach</part>
                                    <part localtype="firstname">Johann
                                    Christian</part>
                </persname>
                <persname>
                                    <part
                                    localtype="lastname">Bach</part>
                                    <part localtype="firstname">Wilhelm
                                    Friedemann</part>
                                    </persname>
                                    <persname>
                                    <part
                                    localtype="lastname">Bach</part>
                                    <part localtype="firstname">Johann
                                    Christoph Friedrich</part>
                                    </persname>
            </namegrp>
            <ref href="https://en.wikipedia.org/
            wiki/Bach_family" linktitle="Link
            to Wikipedia entry about the Bach
            family">Bach family</ref>
        </indexentry>
    </index>
</archdesc>
```

## <notestmt> Note Statement (Table of Contents)

| Summary: | An optional child element of $<$ filedesc $>$ that binds together one or more $<$ controlnote $>$ elements. |
| :---: | :---: |
| May contain: | controlnote |
| May occur within: | filedesc |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) <br> encodinganalog Optional <br> id Optional <br> lang Optional <br> script Optional |
| Description and Usage: | Use < notestmt> to record one or more general descriptive notes about the EAD instance, each note being encoded in a single <controlnote $>$. $<$ controlnote $>$ is similar to the "general note" in traditional bibliographic descriptions. |
| Availability: | Optional, not repeatable |
| Examples: | ```<filedesc> [. . .] <notestmt> <controlnote localtype="bpg"> <p>This encoded finding aid is compliant with the Yale EAD Best Practice Guidelines, Version 1.0.</p> </controlnote> </notestmt> </filedesc> <notestmt> <controlnote> <p>Contact information: <ref show="new" actuate="onrequest" href="http://hdl.loc.gov/loc.mss/ mss.contact">http://hdl.loc.gov/loc.mss/ mss.contact</ref> </p> </controlnote> <controlnote> <p>Catalog Record: <ref href="http://lccn.loc.gov/ mm82036905" actuate="onrequest" linktitle="MARC record for``` |

```
                collection">http://lccn.loc.gov/
            mm82036905</ref>
        </p>
        </controlnote>
</notestmt>
```

## $<$ num $>$ Number (Table of Contents)

| Summary: | A generic element for expressing numeric information. |  |
| :--- | :--- | :--- |
| May contain: | [text], abbr, emph, expan, foreign, lb, ptr, ref |  |
| May occur within: | abstract, archref, bibref, entry, event, item, p, <br> physfacet, publicationstmt, ref, seriesstmt, unittitle |  |
| Attributes: | altrender | Optional |
|  | audience | Optional (values |
|  |  | limited to: external, |
|  | encodinganalog | internal) |
|  | id | Optional |
|  | lang | Optional |
|  | localtype | Optional |
|  | script | Optional |

Description and A generic element for encoding numeric information in Usage:

Availability: Optional, repeatable
See also: Do not confuse with < container>, < unitid> , $<$ recordid $>$, or $<$ otherrecordid $>$ which may also contain numeric information.

## Examples:

```
<filedesc>
    <titlestmt>[...]</titlestmt>
    <seriesstmt>
            <titleproper
            encodinganalog="440$a">Archival
            Inventories and Guides of the World;
            </titleproper>
            <num encodinganalog="440$v"> no. 148
            </num>
    </seriesstmt>
</filedesc>
```

```
<acqinfo>
    <p>The collection (Donor No.
        <num localtype="donor"> 8338 </num>
    ) was donated by
        <persname relator="donor">
            <part>Vonda Thomas</part>
        </persname>
    and
        <persname relator="donor">
            <part>Francine Farrow</part>
        </persname>
    in March 1995.</p>
</acqinfo>
```

## <objectxmlwrap> Object XML Wrap (Table of

Contents)

| Summary: | A sublement of < relation $>$ and $<$ source $>$ that allows for the inclusion of an XML element from any XML namespace other than EAD. |
| :---: | :---: |
| May contain: | [any element from any namespace other than EAD] |
| May occur within: | relation, source |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | A wrapper element that provides a means for incorporating an XML element from any XML encoding language other than EAD3. While not required, to facilitate interoperability the XML included in <objectxmlwrap> should conform to an open, standard XML schema. An xmlns attribute referencing the namespace URI of the standard should be present, possibly on the $<$ ead $>$ root element or at the root of the contained foreign element. <objectxmlwrap> may be used to store related XML data locally rather than linking to external resources in order to facilitate processing or in cases where the related data may not be reliably accessible. |
| Availability: | Optional, not repeatable |
|  | Available in Relax NG and W3C XML Schema versions only - not available in DTD version of EAD3. |
| Example: | ```<sources> <source lastdatetimeverified="2015-07-03T14:36:00-05:00" href="https://archive.org/details/ dictionaryofamer00drakrich"``` |

```
    actuate="onrequest" linktitle="Dictionary of
    American biography">
    <sourceentry>Dictionary of American
    biography: including men of the time ...
    and a supplement</sourceentry>
    <objectxmlwrap>
            <dc>
                <title>Dictionary of American
                    biography, including men of the
                    time; containing nearly ten thousand
                    notices of persons of both sexes,
                    of native and foreign birth, who
                    have been remarkable, or prominently
                    connected with the arts, sciences,
                    literature, politics, or history
                    of the American continent. Giving
                    also the pronunciation of many of
                    the foreign and peculiar American
                names, a key to the assumed names of
                    writers, and a supplement</title>
                    <creator>Drake, Francis S. (Francis
                    Samuel), 1828-1885</creator>
                    <date>1872</date>
                    <identifier>E176 .D725
                    1872</identifier>
                    <identifier> https://archive.org/
                    details/dictionaryofamer00drakrich
                    </identifier>
            </dc>
    </objectxmlwrap>
    <descriptivenote>
            <p>Basic biographical information about
                    <persname source="lcnaf"
                normal="Freeman, Nathaniel,
                1741-1827">
                    <part>Nathaniel Freeman</part>
                </persname>
            was taken from
                <title>
                    <part>Dictionary of American
                    biography: including men of the
                    time ... and a supplement</part>
                </title>
            , page 340.</p>
        </descriptivenote>
    </source>
</sources>
```

## <occupation > Occupation (Table of Contents)

| Summary: | An element for specifying a profession. |  |
| :--- | :--- | :--- |
| May contain: | part |  |
| May occur within: | abstract, archref, bibref, controlaccess, entry, event, <br> indexentry, item, namegrp, p, physfacet, ref, unittitle |  |
| Attributes: | altrender | Optional |
|  | audience | Optional (values |
|  |  | limited to: external, |
|  | encodinganalog | internal) |
|  | id | Optional |
|  | identifier | Optional |
|  | lang | Optional |
|  | localtype | Optional |
|  | normal | Optional |
|  | relator | Optional |
|  | rules | Optional |
|  | script | Optional |
|  | source | Optional |

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the occupation in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local practice requires specification of the type of occupation.

Use @normal to identify a standardized form of the occupation if not provided in the element itself.

Use @relator to specify, either as a URI or a string, other relationship(s) the occupation has to the described materials. The schema does not limit possible values of @relator, but an institution could define and enforce values elsewhere if desired.
$\left.\begin{array}{ll}\text { Description and } & \begin{array}{l}\text { A type of work, profession, trade, business, or } \\ \text { avocation significantly reflected in the materials being } \\ \text { described. }\end{array} \\ \text { <occupation > must contain one or more <part> } \\ \text { elements. A single < part > may be used for the entire } \\ \text { string, or if more granularity is desired, multiple } \\ \text { <part> elements may be used to capture each } \\ \text { component of the occupation term, e.g., }\end{array}\right\}$

## <odd> Other Descriptive Data (Table of Contents)

| Summary: | For recording additional information about the described materials that is not easily incorporated into one of the other named elements within <archdesc> and $<\mathrm{c}>$. |
| :---: | :---: |
| May contain: | blockquote, chronlist, head, list, odd, p, table |
| May occur within: | archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, odd |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Attribute usage: | Use @localtype to more specifically designate the type of information being provided. |
| Description and Usage: | <odd> may be useful in converting legacy finding aids to the EAD format, by designating as "other" information that does not easily map to a more specific element. <odd> may be used when information about the described materials does not correspond to another element's definition, when the information is heterogeneous enough to make a single classification difficult, and when shifting the information to permit more specific content designation would be too costly or burdensome. |
|  | Use <odd> only after considering how the existence of unspecified content will affect search, retrieval, and display. |

## $<$ origination > Origination (Table of Contents)

| Summary: | A child element of $<$ did $>$ that names the creator or collector of the described materials. |
| :---: | :---: |
| May contain: | corpname, famname, name, persname |
| May occur within: | did |
| Attributes: | altrender Optional <br> audience <br>  Optional (values <br> limited to: external, <br> internal) <br> encodinganalog Optional <br> id Optional <br> label Optional <br> lang Optional <br> localtype Optional <br> script Optional |
| Description and Usage: | <orgination > records the name of an individual, organization, or family responsible for the creation, accumulation, or assembly of the described materials prior to their accessioning by an archival repository. <origination > may be used to indicate such agents as correspondents, records creators, collectors, or dealers. |
| Availability: | Optional, repeatable |
| References: | ISAD(G) 3.2.1 |
|  | MARC 100, 110, 111 |
|  | MODS < name> |
| Examples: | ```<archdesc level="collection"> <did> <origination label="Creator"> <corpname encodinganalog="110" source="lcnaf"> <part>National Association for the Advancement of Colored People</part> </corpname> </origination> [. . .] </did> [. . .] </archdesc>``` |

        <part>1904-1990</part>
    </persname>
</origination>
```

## <otheragencycode > Other Agency Code (Table of

Contents)

| Summary: | A child element of < maintenanceagency > that provides an alternative code for the institution or service responsible for the EAD instance. |
| :---: | :---: |
| May contain: | [text] |
| May occur within: | maintenanceagency |
| Attributes: | altrender Optional |
|  | audience Optional (values |
|  | limited to: external, internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Attribute usage: | Use @localtype to specify the type of code being provided. |

| Description and | Use <otheragencycode $>$ to provide alternative and/or <br> local institution code that represents the institution or <br> service responsible for the creation, maintenance, and/ <br> or dissemination of the EAD instance. Any code other <br> than that given in <agencycode $>$ may be provided in <br> <otheragencycode>. The addition of an ISO 3166-1 <br> alpha-2 country code as the prefix to a local code is <br> recommended to ensure international uniqueness. |
| :--- | :--- |
| Availability: | Optional, repeatable |
| See also: | To provide an institution code in the format of <br> the International Standard identifier for Libraries <br> and Related Organizations (ISIL: ISO 15511), use <br> <agencycode $>$. |

Provide the name of the agency in <agencyname>.

References: MODS < recordContentSource>

## Examples:

```
<maintenanceagency>
    <otheragencycode localtype="archon"> GB-58
    </otheragencycode>
    <agencyname>British Library</agencyname>
</maintenanceagency>
<maintenanceagency>
    <agencycode>DNASA-G</agencycode>
    <otheragencycode localtype="agency"> GSFC
    </otheragencycode>
    <agencyname>NASA Goddard Space Flight
    Center</agencyname>
</maintenanceagency>
```

## < otherfindaid > Other Finding Aid (Table of Contents)

| Summary: | For identifying any other finding aids to the materials being described. |
| :---: | :---: |
| May contain: | archref, bibref, blockquote, chronlist, head, list, otherfindaid, p , table |
| May occur within: | archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09 c10, c11, c12, otherfindaid |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Description and Usage: | Information about additional or alternative guides to the described material, such as card files, dealers' inventories, a catalog record, or lists generated by the creator or compiler of the materials. <otherfindaid> is used to indicate the existence of additional finding aids; it is not designed to encode the content of those guides. |
|  | If desired, use <archref $>$ to give a formal citation to the other finding aid or to link to an online version of it. |
| Availability: | Optional, repeatable |
| References: | ISAD(G) 3.4.5 |

Examples:

```
<otherfindaid>
    <bibref>The Society has published an
    expanded guide to this collection:

    </otherrecordid>
    <filedesc>[. . .]</filedesc>
[. . .] </control>
```

## $<\mathbf{p}>$ Paragraph (Table of Contents)

$\left.\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { A general purpose element used to encode blocks of } \\ \text { text. }\end{array} \\ \text { [text], abbr, corpname, date, emph, expan, famname, } \\ \text { footnote, foreign, function, genreform, geogname, lb, } \\ \text { list, name, num, occupation, persname, ptr, quote, ref, }\end{array}\right\}$
first as Assistant Professor (1970-1975), and then as Associate Professor (1980-1987). At King's College University, Halifax he held the position of Assistant Professor (1975-1976), before becoming President and Vice-Chancellor (1977-1987).</p>
</bioghist>

| Summary: | A required and repeatable child of controlled access elements used to encode one or more parts of an access term. |
| :---: | :---: |
| May contain: | [text], abbr, date, emph, expan, foreign, lb, ptr, ref |
| May occur within: | corpname, famname, function, genreform, geogname, name, occupation, persname, subject, title |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | identifier Optional |
|  | lang Optional |
|  | localtype Optional |
|  | rules Optional |
|  | script Optional |
|  | source Optional |
| Attribute usage: | Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC. |
|  | Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the part in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system, if different from the @identifier for the parent element. Do not confuse with @id, which provides a unique id for the element within the XML instance. |
|  | Use @localtype, if local practice requires specification of the type of part. |
| Description and | Identifies a term contained in an access point element. |
| Usage: | Access point elements may contain a single <part> for an entire string, or multiple <part> elements when more granularity is desired in delineating and identifying the components of a multi-term string. For post-coordinated access points combining terms from multiple vocabularies, the @identifier, @rules, and @source attributes may be used to associate individual parts to their respective vocabularies. |

| Availability: | Required, repeatable. |
| :---: | :---: |
| Examples: | <persname encodinganalog="600" |
|  | relator="creator" rules="RDA" |
|  | identifier="http://viaf.org/viaf/23746712"> |
|  | <part localtype="surname"> Casey </part> |
|  | <part localtype="givenname"> Silas </part> |
|  | <part localtype="dates"> 1807-1882 </part> |
|  | </persname> |
|  | <subject encodinganalog="650" rules="RDA" |
|  | source="lcsh"> |
|  | <part encodinganalog="a"> Railroads </part> |
|  | <part encodinganalog="z"> Washington (State) |
|  | </part> |
|  | <part encodinganalog="x"> History </part> |
|  | </subject> |
|  | <subject encodinganalog="650" source |
|  | <part> Dance schools-- Massachusetts-- |
|  | Boston--Archival resources. </part> |
|  | </subject> |

## <persname> Personal Name (Table of Contents)

| Summary: | An element for identifying a personal name. |  |
| :--- | :--- | :--- |
| May contain: | part |  |
| May occur within: | abstract, archref, bibref, controlaccess, entry, event, <br> indexentry, item, namegrp, origination, p, physfacet, <br>  <br> ref, repository, unittitle |  |
| Attributes: | altrender | Optional |
|  | audience | Optional (values |
|  |  | limited to: external, |
|  | encodinganalog | internal) |
|  | id | Optional |
|  | identifier | Optional |
|  | lang | Optional |
|  | localtype | Optional |
|  | normal | Optional |
|  | relator | Optional |
|  | rules | Optional |
|  | script | Optional |
|  | source | Optional |

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the personal name in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local practice requires specification of the type of personal name.

Use @normal to identify a standardized form of the personal name if not provided in the element itself.

Use @relator to specify, either as a URI or a string, other relationship(s) the personal name has to the described materials, for example, "compiler," "creator," "collector," or "subject." The schema does not limit possible values of @relator, but an institution could define and enforce values elsewhere if desired.
$\left.\begin{array}{ll}\text { Description and } & \begin{array}{l}\text { Identifies a name, including any or all forenames, } \\ \text { Usage: } \\ \text { surnames, honorific titles, and added names, of a } \\ \text { person who is related to the materials being described } \\ \text { as either a source, creator, or subject. }\end{array} \\ & \text { <persname> must contain one or more <part> } \\ \text { elements. A single < part> may be used for the entire } \\ \text { string, or if more granularity is desired, multiple } \\ \text { <part> elements may be used to capture each } \\ \text { component of the personal name, e.g., }\end{array}\right]$

## $<$ physdesc> Physical Description (Table of Contents)

| Summary: | A child element of $<$ did $>$ that provides a simple, unstructured statement about the physical characteristics of the material being described. |
| :---: | :---: |
| May contain: | [text], abbr, emph, expan, foreign, lb, ptr, ref |
| May occur within: | did |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | label Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Description and Usage: | <physdesc> is for describing, in an unstructured statement, the physical or logical extent, medium, appearance, or construction of the described materials, such as their dimensions, a count of their quantity, a statement about the space they occupy, and terms describing their genre, form, or function, as well as any other aspects of their appearance, such as color, substance, style, and technique or method of creation. |
|  | Those who wish to record formally structured elements of physical description in order to enable consistent machine processing and data exchange will want to use $<$ physdescstructured $>$ instead of $<$ physdesc $>$. |
| Availability: | Optional, repeatable |
| References: | ISAD(G) 3.1.5 |
|  | MARC 300 |
|  | MODS < physicalDescription > <extent> |
| Examples: | <c01 level="series"> <br> <did> |

    on the years Scully attended the University
    of Maryland.</didnote>
</did>
```

## <physdescset> Physical Description Set (Table of

Contents)

| Summary: | A child element of $<$ did $>$ used to bind two or more structured expressions of the physical description of the materials. |
| :---: | :---: |
| May contain: | physdescstructured |
| May occur within: | did |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | coverage Optional (values <br> limited to: part, <br> whole) |
|  | encodinganalog Optional |
|  | id Optional |
|  | label Optional |
|  | lang Optional |
|  | parallel Optional (values <br> limited to: false, true)  |
|  | script Optional |
| Description and Usage: | <physdescset> binds together two or more <br> <physdescstructured> elements. A set of <br> <physdescstructured> elements may relate in one of two ways: they may be parallel to each other or they may describe disparate parts that together represent the whole or part of the material described. |
|  | For example, a < physdescset> with @parallel = "true" might bind a <physdescstructured> element with @physdescstructuredtype = "carrier" and a < physdescstructured> element with @physdescstructuredtype= "spaceoccupied," indicating that the two <physdescstrutured> elements describe the same materials in different ways and are therefore parallel statements of extent. @parallel = "true" denotes that < physdescset > and its child < physdescstructured > elements share the same @coverage value, i.e., a statement of extent for part of the materials described cannot be parallel to |

a statement of extent for the whole of the materials described.

Alternately, a <physdescset> with @parallel="false" may combine two or more < physdescstructured > elements that do not describe the same materials. @parallel = "false" denotes that < physdescstructured > elements that comprise the set all share @coverage = "part" (two or more extent statements with @coverage = "whole" are by definition parallel).
A < physdescset > with @parallel="false" and @coverage = "whole" indicates multiple statements of extent that in sum represent the whole of the materials being described.

A < physdescset > with @parallel = "false" and @coverage = "part" indicates multiple statements of extent that in sum represent a part of the materials being described.

It is not necessary to bind multiple <physdescstructured> elements within <physdescset>. Only do so when you need to convey the relationships indicated by @parallel and @coverage.

## <phystech> Physical Characteristics and Technical Requirements (Table of Contents)

| Summary: | For describing the physical condition of the materials and/or technical requirements that affect their use. |
| :---: | :---: |
| May contain: | blockquote, chronlist, head, list, p, phystech, table |
| May occur within: | archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, phystech |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Description and Usage: | <phystech > is used to capture any physical or technical characteristics that affect the storage or use of the materials described. This may include details of their physical composition, preservation requirements, or particular hardware or software needed to access the materials. |
| Availability: | Optional, repeatable |
| References: | ISAD(G) 3.4.4 |
|  | MARC 340, 538 |
| Examples: | ```<c04 level="item"> <did>[...]</did> <phystech>``` |
|  | <p>Some oxydization of the aluminum layer.</p> <br> </phystech> |
|  | </c04> |
|  | $\begin{aligned} & \text { <c02 level="subseries"> } \\ & \text { <did>[...]</did> } \\ & \text { <phystech> } \end{aligned}$ |
|  | ```<head>System Requirements</head> <p>48K RAM; Apple Disk II with controller; colour monitor</p> </phystech> </c02>``` |

## $<$ prefercite $>$ Preferred Citation (Table of Contents)

| Description and | Use <prefercite> to supply users with a prescribed |
| :--- | :--- |
| Usage: | wording or format for references to the described |
|  | materials to be included in bibliographies, footnotes, |
| screen credits, etc. |  |

Availability: Optional, repeatable

See also: $\quad$ Do not confuse with $<$ archref $>$ or $<$ bibref $>$, which are used to cite materials other than those described in the finding aid.

## References:

Examples:

## $<$ ptr $>$ Pointer (Table of Contents)

$\left.\begin{array}{ll}\text { Summary: } & \begin{array}{l}\text { An empty element that provides links to content that } \\ \text { may be internal or external to the finding aid. }\end{array} \\ \text { [empty] } \\ \text { May contain: } \\ \text { May occur within: } \\ \text { abstract, addressline, archref, author, bibref, citation, } \\ \text { container, date, datesingle, didnote, dimensions, } \\ \text { edition, emph, entry, event, fromdate, head, head01, } \\ \text { head02, head03, indexentry, item, label, materialspec, } \\ \text { num, p, part, physdesc, physfacet, physloc, ptrgrp, } \\ \text { publisher, quote, ref, sponsor, subtitle, titleproper, }\end{array}\right\}$

Attribute usage: Use @target to link to another element within the finding aid.

Use @href to link to or embed an external file.
Use @linkrole to provide a URI that characterizes the nature of the remote resource to which $<\mathrm{ptr}>$ links.

Use @arcrole to provide a URI that characterizes the nature of the link itself.

| Description and Usage: | An empty linking element that provides links both to content within a finding aid, or from a finding aid to external content. <ptr> may be used in a variety of ways in an encoded finding aid. For example, $<$ ptr $>$ may provide an internal link from one location in a finding aid to another. Or, <ptr> might be used to embed an image into the text of a finding aid. Unlike $<$ ref $>,<$ ptr $>$ cannot contain text or child elements to describe the referenced object. When $<\mathrm{ptr}>$ is used to embed internal links, the text of the link must be generated by the transforming style sheet. |
| :---: | :---: |
| Availability: | Within < ptrgrp>: One of $<$ ptr $>$ or $<$ ref $>$ is required, repeatable <br> Within <indexentry > : Optional, not repeatable <br> Within all other parents: Optional, repeatable |
| See also: | $<$ ref $>$, if you wish to encode text and child elements to display a link to the external file. <br> $<$ dao $>$, if you wish to link to or embed an external file in $<\operatorname{did}>$. |
| Example: | <appraisal> <br> <p>This collection was re-appraised by repository staff in 1992 in order to facilitate use by weeding the collection of materials no longed deemed as having evidential or informational value. A list of materials removed from the collection after the re-appraisal is provided at the end of this guide. <br> <ptr actuate="onrequest" show="replace" <br> target="mss1982-062_add2" /> <br> </p> <br> </appraisal> |

## Example:

```
<archdesc> [...]
    <index>
        <head>Correspondent Index</head>
    [...]
        <indexentry>
            <persname>
                <part
                localtype="lastname">Dickinson</part>
                <part
                    localtype="firstname">Emily</part>
            </persname>
            <ptrgrp>
                    <ptr target="a1234"
                    actuate="onrequest" show="replace"/>
                    <ptr target="a1238"
                    actuate="onrequest" show="replace"/>
                    <ptr target="a1258"
                    actuate="onrequest" show="replace"/>
            </ptrgrp>
        </indexentry>
    [...] </index>

\text { [...] </c> } \\
\text { </dsc> } \\
\text { </archdesc> }
\end{gathered}
$$

| Contents) |  |
| :---: | :---: |
| Summary: | An optional child element of <control> that records the current publishing status of the EAD instance. |
| May contain: | [text] |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br> limited to: external, <br>  <br> internal) <br> encodinganalog Optional <br> id Optional <br> lang Optional <br> script Optional <br> value Required (values <br>  limited to: inprocess, <br>  approved, published) |
| Attribute usage: | Use @value, which offers a controlled list of terms, to provide information about the current publication status of the EAD instance. |
| Description and Usage: | Use < publicationstatus > to indicate the current publication status of the EAD instance, whether in process or final. An optional element, <publicationstatus>, is only necessary if it supports local maintenance practice. |
|  | If present, the current publication status must always be reflected in the required @value attribute. The element should only have a text value if it is necessary to provide a value for < publicationstatus > in a language other than English, otherwise it should remain empty. |
| Availability: | Optional, not repeatable |
| Examples: | ```<control> [. . .] <maintenancestatus value="derived"/> <publicationstatus value=" approved "/> <maintenanceagency> <otheragencycode localtype="archon">GB-58</otheragencycode> <agencyname>British Library</agencyname> </maintenanceagency> [. . .] </control>``` |

<control> [. . .]
<maintenancestatus value="revised"/> <publicationstatus value="published"/>
<maintenanceagency> <agencycode>DNASA-G</agencycode> <otheragencycode localtype="agency">GSFC</otheragencycode> <agencyname>NASA Goddard Space Flight Center</agencyname>
</maintenanceagency>
[. . .] </control>

## <publicationstmt> Publication Statement (Table of

Contents)

| Summary: | An optional child element of $<$ filedesc $>$ that provides information concerning the publication or distribution of the EAD instance. |
| :---: | :---: |
| May contain: | address, date, num, p, publisher |
| May occur within: | filedesc |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | script Optional |
| Description and Usage: | Use < publicationstmt> to record and bind together information about the publication or distribution of a finding aid. Such information includes the publisher's name and contact information, publication date, and other details of publication or distribution. <publicationstmt> may contain free text within one or more $<\mathrm{p}>$ elements, or it may include <publisher>, <address>, <date>, and <num> child elements, which allow for more specific tagging of a publisher's name and address, the date of publication, and the number, if any, assigned to the published finding aid. |
| Availability: | Optional, not repeatable |

## Example:

```
<filedesc>
    <titlestmt>
        <titleproper>Guide to the Edward Raymond
        Zane Letters, 1960</titleproper>
        <author>Noah Huffman</author>
    </titlestmt>
    <publicationstmt>
        <publisher>David M. Rubenstein Rare Book
        and Manuscript Library</publisher>
        <address>
            <addressline>411 Chapel
                Drive</addressline>
                <addressline>Duke
                University</addressline>
                <addressline>Durham 27708</addressline>
        </address>
        <date>February 2016</date>
        <num>RL.11119</num>
    </publicationstmt>
</filedesc>
```

| < publisher > | Publisher (Table of Contents) |
| :---: | :---: |
| Summary: | A child element of < publicationstmt> that identifies the institution or agency responsible for distribution of the EAD instance. |
| May contain: | [text], abbr, emph, expan, foreign, lb, ptr, ref |
| May occur within: | publicationstmt |
| Attributes: | altrender Optional |
|  | audience Optional (values |
|  | limited to: external, internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Attribute usage: | Use @localtype if local practice requires recording the type of name. |
| Description and Usage: | Use < publisher> to record the name of the agent responsible for issuing or distributing the EAD instance. Often this is the same corporate body identified in $<$ repository $>$ in $<$ did $>$. |
| Availability: | Within <publicationstmt> one of <address>, $<$ date $>,<$ num $>,<\mathrm{p}>$, or $<$ publisher $>$ is required, repeatable |

## Examples:

```
<publicationstmt>
    <publisher> Yale University Library
    </publisher>
    <publisher> Beinecke Rare Book and
    Manuscript Library </publisher>
    <publisher> General Collection of Modern
    Books and Manuscripts </publisher>
    <address>
        <addressline>New Haven,
        Connecticut</addressline>
    </address>
    <date localtype="original"
    normal="2006-10">October 2006</date>
    <p>
        <ref actuate="onrequest" show="new"
        href="http://hdl.handle.net/10079/9p8czk9
        "> Copyright ©
            <date localtype="copyright"
            normal="1996/2007">1996-2007</date>
        by the Yale University Library.</ref>
    </p>
</publicationstmt>
<publicationstmt>
    <publisher> British Library </publisher>
</publicationstmt>
```

## <quantity > Quantity (Table of Contents)

| Summary: | A required child element of <physdescstructured> that indicates the number of units present as described by <unittype>. |
| :---: | :---: |
| May contain: | [text] |
| May occur within: | physdescstructured |
| Attributes: | altrender Optional <br> approximate Optional (values <br> audience limited to: false, true) <br>  <br>  <br> Optional (values <br> limited to: external, <br> encodinganalog <br> id <br> internal) <br> lang <br> script <br> Optional  <br> Optional  |
| Description and Usage: | $<$ quantity $>$ is for indicating the number of <br> $<$ unittype $>$ s being described. The content of <quantity > should be a number. Use of <quantity> enables extent statements to be machine processable. If the quantity is unknown, the element should remain empty. |
| Availability: | Required, not repeatable |
| Examples: | <physdescstructured <br> physdescstructuredtype="materialtype" <br> coverage="whole"> <br> <quantity> 15 </quantity> <br> <unittype>daguerreotypes</unittype> <br> <dimensions>3.25" x 4.25"</dimensions> <br> <physfacet>hand colored</physfacet> <br> </physdescstructured> <br> <physdescstructured coverage="part" <br> physdescstructuredtype="carrier"> <br> <quantity> 1 </quantity> <br> <unittype>hard disk</unittype> <br> </physdescstructured> <br> <physdescstructured coverage="part" <br> physdescstructuredtype="materialtype"> <br> <quantity> 7500 </quantity> <br> <unittype>electronic files</unittype> <br> </physdescstructured> |

<physdescstructured coverage="part" physdescstructuredtype="carrier">
<quantity> 50 </quantity>
<unittype>boxes</unittype>
</physdescstructured>
<physdescstructured coverage="part" physdescstructuredtype="carrier">
<quantity> 5 </quantity>
<unittype>broadside folders</unittype>
</physdescstructured>
<physdescstructured coverage="part" physdescstructuredtype="materialtype">
<quantity> 10 </quantity>
<unittype>videocassettes</unittype>
<physfacet>tabs removed</physfacet>
</physdescstructured>

## < quote> Quote (Table of Contents)

| Summary: | A phrase-level element for identifying or formatting an inline quotation. |
| :---: | :---: |
| May contain: | [text], abbr, emph, expan, foreign, lb, ptr, ref |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | render Optional |
|  | script Optional |
| Description and Usage: | Use <quote> to identify inline quotations within a block of text. |
| Availability: | Optional, repeatable |
| See also: | Use < blockquote> to designate an extended quotation. |
| References: | Equivalent to the element < q > in HTML. |
| Example: | <p>In 1963, at the age of 27, Turnbull cofounded the firm of MLTW with fellow principals Charles Moore, Donlyn Lyndon, and Richard Whitaker. In a 1968 letter to architectural historian David Gebhardt, Turnbull writes of the MLTW collaboration, <br> <quote>Essentially Chuck, Don, Dick and I are or were all designers. We worked together with the man having the strongest opinion about a subject usually prevailing. This built-in system of checks and balances was one of the reasons why the quality of design was so high . . .</quote> </p> |

| <recordid> | Record Identifier (Table of Contents) |
| :---: | :---: |
| Summary: | A required child element of $<$ control $>$ that designates a unique identifier for the EAD instance. |
| May contain: | [text] |
| May occur within: | control |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br> internal) <br> encodinganalog <br> id Optional <br> instanceurl Optional <br> lang Optional <br> script Optional |
| Attribute usage: | Use @instanceurl to record the URL of the EAD XML instance. |
| Description and Usage: | $<$ recordid> is used for recording a unique identifier for the EAD instance. The institution assigning the identifier ensures uniqueness of the <recordid> value within the archival descriptions under its control. A globally unique identifier may be constructed within $<$ recordid $>$ according various external protocols (i.e. HTTP URI, DOI, PURL, or UUID), or in combination with <agencycode>, which is a recommended child element of <maintenanceagency>. |
| Availability: | Required, not repeatable |
| See also: | If recording alternative identifiers is desired, use <otherrecordid>. |
|  | Use < representation > to capture URLs for transformed and deliverable versions of the EAD instance (HTML, PDF, etc.). |
|  | Do not confuse with <unitid>, which records unique identifiers for the materials being described, rather than the finding aid itself. |
| References: | ISAD(G) 3.1.1 |
|  | MODS < recordIdentifier> |

## Examples:

```
<control>
    <recordid> AddMS88938 </recordid>
    <filedesc>
        <titlestmt>
                <titleproper>Catalogue of the Papers of
                James Graham Ballard</titleproper>
            </titlestmt>
            <publicationstmt>
                <publisher>British Library</publisher>
        </publicationstmt>
    </filedesc>
[. . .] </control>
<control>
    <recordid instanceurl="http://
    drs.library.yale.edu/findaids/wa-mss-
    s-2636.xml"> WA MSS S-2636 </recordid>
    <otherrecordid
    localtype="mss">S-2636</otherrecordid>
    <filedesc>[. . .]</filedesc>
[. . .] </control>
```

## $<$ ref $>$ Reference (Table of Contents)

Summary: An element that provides a link to content that may be internal or external to the finding aid.
May contain: [text], abbr, corpname, date, emph, expan, famname, footnote, foreign, function, genreform, geogname, lb, name, num, occupation, persname, ptr, quote, subject, title

May occur within: abstract, addressline, archref, author, bibref, citation, container, date, datesingle, didnote, dimensions, edition, emph, entry, event, fromdate, head, head01, head02, head03, indexentry, item, label, materialspec, num, p, part, physdesc, physfacet, physloc, ptrgrp, publisher, quote, sponsor, subtitle, titleproper, todate, unitdate, unitid, unittitle

## Attributes:

| actuate | Optional (values <br> limited to: none, <br> onload, onrequest, <br> other) |
| :--- | :--- |
| altrender | Optional <br> arcrole <br> audience |
|  | Optional |
| Optional (values |  |
| limited to: external, |  |
| internal) |  |
| entityref | Optional |
| href | Optional |
| id | Optional |
| lang | Optional |
| linkrole | Optional |
| linktitle | Optional |
| script | Optional |
| show | Optional (values |
|  | limited to: embed, |
|  | new, none, other, |
| target | replace) |
| xpointer | Optional (IDREF) |
|  | Optional |

Attribute usage: Use @target to link to another element within the finding aid.

Use @href to link to or embed an external file.

Use @linkrole to provide a URI that characterizes the nature of the remote resource to which $<$ ref $>$ links.

Use @arcrole to provide a URI that characterizes the nature of the link itself.

## Description and Usage:

Availability:

See also:

Example:
$<$ ref $>$ may be used in a variety of ways in an encoded finding aid. For example, $<$ ref $>$ may provide an internal link from one $<\mathrm{c}>$ to another related $\langle\mathrm{c}\rangle$ in the same way that See and See also references direct readers of paper-based finding aids. Or, < ref > might be used to direct the reader from text in a scope and content note to a description of a $<\mathrm{c}>$ in a contents list. <ref > might also point to an external file, for example, a finding aid for a related collection at another repository.

Within < ptrgrp>: One of $<\mathrm{ptr}>$ or $<\mathrm{ref}>$ is required, repeatable
Within <indexentry > : Optional, not repeatable Within all other parents: Optional, repeatable

Use $<$ ptr $>$ to provide a reference to a file when text or child elements that describe the referenced object are not needed, for example, when providing an image to be embedded in the finding aid.

## $<$ relatedmaterial > Related Material (Table of

Contents)

| Summary: | For identifying archival materials that have an association to the materials being described. |
| :---: | :---: |
| May contain: | archref, bibref, blockquote, chronlist, head, list, p, relatedmaterial, table |
| May occur within: | archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, relatedmaterial |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
| Description and Usage: | $<$ relatedmaterial > is used to identify associated materials in the same repository or elsewhere. These materials may be related by sphere of activity, or subject matter. |
| Availability: | Optional, repeatable |
| See also: | Do not confuse with < separatedmaterial $>$, which provides information about materials that have been separated or physically removed from the described materials but that are related to them by provenance. |
|  | Do not confuse with <altformavail>, which encodes information about copies of the described materials, such as microforms, photocopies, and reproductions in digital formats. |
|  | Do not confuse with <originalsloc>, which encodes information regarding the existence and location of the originals when the unit being described consists of copies. |

| <relation $>$ | Relation (Table of Contents) |
| :---: | :---: |
| Summary: | A child element of $<$ relations $>$ for describing a relationship between the materials described in the EAD instance and a related entity. |
| May contain: | daterange, dateset, datesingle, descriptivenote, objectxmlwrap, geogname, relationentry |
| May occur within: | relations |
| Attributes: | actuate Optional (values <br> limited to: none, <br> onload, onrequest, <br> other) |
|  | altrender Optional |
|  | arcrole Optional |
|  | audience Optional (values <br> limited to: external,  <br> internal)  |
|  | encodinganalog Optional |
|  | href Optional |
|  | id Optional |
|  | lang Optional |
|  | lastdatetimeverified Optional (must follow <br> pattern based on ISO <br>  8601 ) |
|  | linkrole Optional |
|  | linktitle Optional |
|  | otherrelationtype Optional |
|  | relationtype Required (values <br> limited to: cpfrelation,  <br>  functionrelation, <br> resourcerelation,  <br>  otherrelationtype) |
|  | script Optional |
|  | show Optional (values |
|  | limited to: embed, new, none, other, replace) |
| Attribute usage: | Use @relationtype to specify the kind of relationship being encoded. |
|  | Use @otherrelationtype to specify the alternate type of relationship, when @relationtype is set to "otherrelationtype" |

Use @arcrole to supply a URI that describes the nature of the relationship between the materials being described and the related entity.

Use @linkrole to supply a URI that describes the nature of the remote resource.

Description and Usage:
<relation > records descriptive information about a relationship between the materials being described and a related entity, such as: an archival, bibliographic, or other resource; a corporate body, person, or family; a function; or any other entity.
Use < relationentry > to provide a textual description of the related entity. Use <objectxmlwrap> to embed XML documenting the related entity from any namespace other than EAD. Use $<$ date $>$, $<$ daterange $>$, or $<$ dateset $>$ for specifying the time period of the relationship and <geogname $>$ for relevant location information. < descriptivenote> may be included for more detailed specifications or explanations of the relationship.

The prescribed order of all child elements (both required and optional) is:

```
< relationentry >
<objectxmlwrap>
<datesingle>, < daterange>, and/or
< dateset>
<geogname>
<descriptivenote>
```

Element status:

Availability:

See also:

Required, repeatable
Experimental in EAD3
The children of <controlaccess > , which can be used to specify the individuals, organizations, families, topics, and functions related to the materials being described using controlled vocabularies.

Example: $\quad$ See examples under $<$ relations $>$.

## $<$ relationentry $>$ Relation Entry (Table of Contents)

| Summary: | A child element of $<$ relation $>$ that identifies an entity related to the materials being described. |
| :---: | :---: |
| May contain: | [text] |
| May occur within: | relation |
| Attributes: | altrender Optional <br> audience Optional (values <br>  limited to: external, <br>  internal) |
|  | encodinganalog Optional |
|  | id Optional |
|  | lang Optional |
|  | localtype Optional |
|  | script Optional |
|  | transliteration Optional |
| Attribute usage: | Use @localtype if local practice requires recording the type of relation entry. |
|  | Use @transliteration to indicate the conventions or rules that prescribe a method for converting one script to another. |
| Description and Usage: | $<$ relationentry > identifies an entity that has a relationship to the materials being described. The entry may name a corporate body, person, family, resource, function, or other entity as defined by the @relationtype of the parent < relation>. |
|  | $<$ relationentry > should only repeat when necessary to express the same <relationentry> in multiple languages or scripts. |
|  | Element status: |
| Availability: | Optional, repeatable |
| Example: | ```<archdesc level="fonds"> [...] <relations> <relation relationtype="resourcerelation" href="http://www.archivesportaleurope.net/ ead-display/-/ead/pl/aicode/ES-28079-AHN9/``` |

[^1]
## $<$ relations $>$ Relations (Table of Contents)

| Summary: | An element that groups one or more <relation $>$ <br> elements, which identify external entities and <br> characterize the nature of their relationships to the <br> materials being described. |
| :--- | :--- |
| May contain: | relation |
| May occur within: | archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, <br> c10, c11, c12 |
| Attributes: | altrender |
| audience |  |
|  |  |
|  | base |
|  | encodinganalog |
| id | Optional (values |
| lang | limited to: external, |
| localtype | internal) |
| script | Optional |
|  | Optional |
|  | Optional |
|  | Optional |
|  | Optional |
|  | Optional |

Description and A wrapper element that groups together one or more Usage: < relation > elements, each of which encodes a specific relationship.

The material described in an EAD instance may have relationships with other resources:

For archival collections, bibliographic resources, or artifacts, use < relation > with the @relationtype set to "resourcerelation."

For corporate bodies, persons or families, use <relation> with the @relationtype set to "cpfrelation."

For functions use, < relation > with the @relationtype set to "functionrelation."

For relationships to other entities such as places, events and topics, use <relation> with the @relationtype set to "otherrelationtype" and the type of related entity specified in the @otherrelationtype.

Element status:

```
Availability:
Optional, not repeatable
See also:
<controlaccess>, which binds together elements
containing access headings from controlled
vocabularies related to the described materials.
```

\section*{\(<\) repository \(>\) Repository (Table of Contents)}

\section*{Description and \\ Usage:}
<repository > records the name of the institution or agency, family, or individual responsible for providing intellectual access to the materials being described. <corpname>, <famname>, <name>, or \(<\) persname > must be used within <repository \(>\) to encode the proper name. This may be followed by an optional <address > to provide contact information for the repository.

Although the repository providing intellectual access usually also has physical custody over the materials, this is not always the case. For example, an archives may assume responsibility for long-term intellectual access to electronic records, but the actual electronic data files or systems may continue to reside in the office where they were created and maintained, or they may be held for long-term storage by a unit such as a data library that is able to provide the appropriate technical facilities for storage and remounting.

When it is clear that the physical custodian does not provide intellectual access, use <physloc> to identify the custodian and \(<\) repository \(>\) to designate the intellectual caretaker. When a distinction cannot be made, assume that the custodian of the physical objects also provides intellectual access to them and should be recognized as the \(<\) repository \(>\).

\section*{\(<\) representation > Representation (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A child element of \(<\) control \(>\) for recording a link to a transformed and deliverable version of the EAD instance. \\
\hline May contain: & [text] \\
\hline May occur within: & control \\
\hline \multirow[t]{13}{*}{Attributes:} & \begin{tabular}{ll} 
actuate & \begin{tabular}{l} 
Optional (values \\
limited to: none, \\
onload, onrequest, \\
other)
\end{tabular}
\end{tabular} \\
\hline & altrender Optional \\
\hline & arcrole Optional \\
\hline & \begin{tabular}{ll} 
audience & Optional (values \\
limited to: external, \\
internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & href Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & linkrole Optional \\
\hline & linktitle Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline & \begin{tabular}{ll} 
show & Optional (values \\
& limited to: embed, \\
new, none, other, \\
replace)
\end{tabular} \\
\hline Description and Usage: & Use < representation> to record a link to a transformed and deliverable version of an EAD instance, for example an HTML or PDF version. If desired, the localtype attribute can be used to differentiate multiple <representation> elements. \\
\hline Availability: & Optional, repeatable \\
\hline See also: & Do not confuse with the @instanceurl on < recordid>, used to record the URL of the XML version of the EAD. \\
\hline & Use <otherrecordid> to provide any local identifier for the EAD instance that does not link to a deliverable version. \\
\hline
\end{tabular}
```

Example:
<control countryencoding="iso3166-1"
dateencoding="iso8601" langencoding="iso639-2b"
repositoryencoding="iso15511"
scriptencoding="iso15924"
relatedencoding="MARC21">
<recordid>FRAN_IR_000864</recordid>
<representation href="https://
    www.siv.archives-nationales.culture.gouv.fr/
    siv/IR/FRAN_IR_000864"/>
[...] </control>

```
\begin{tabular}{|c|c|}
\hline \begin{tabular}{l}
< rightsdecla \\
Contents)
\end{tabular} & tion \(>\) Rights Declaration (Table of \\
\hline Summary: & An optional child element of \(<\) control \(>\) that indicates a standard rights statement associated with the EAD instance. \\
\hline May contain: & abbr, citation, descriptivenote \\
\hline May occur within: & control \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use < rightsdeclaration > to provide structured information about the usage rights of the EAD instance. <rightsdeclaration > should only be used to reference shared published licenses, such as Creative Commons, RightsStatements.org, and published locally-defined licenses. \\
\hline & <abbr> may be used to provide the abbreviated name for the rights statement. The value of <abbr> should align with the rights statements referenced by \(<\) citation \(>\) and \(<\) descriptivenote \(>\). \\
\hline & \(<\) citation > must be used to provide a machinereadable reference to a license statement (for example, a dereferenceable URI). It may also be used to encode the name of the license statement. <descriptivenote> may be used to provide additional, human-readable description or explanation of the license statement. \\
\hline & <descriptivenote> may be used to provide a humanreadable description of the license statement. \\
\hline Availability: & Optional, repeatable \\
\hline See also: & Do not confuse with < userestrict>, which provides unstructured rights information about the material being described. \\
\hline
\end{tabular}

Use < publicationstmt> for unstructured and/or nonreferencable rights information associated with the finding aid.

\section*{Example:}
```

<control>
    <rightsdeclaration>
        <abbr>CC0</abbr>
        <citation href="https://
        creativecommons.org/publicdomain/
        zero/1.0/">CC0 1.0 Universal (CC0
        1.0)</citation>
        <descriptivenote> This work has been
        dedicated to the public domain, meaning
        that you can copy, modify, distribute
        and perform the work, even for commercial
        purposes, all without asking permission.
        </descriptivenote>
    </rightsdeclaration>
</control>
```

\section*{< row > Table Row (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A formatting element that contains one or more horizontal cells in a table. \\
\hline May contain: & entry \\
\hline May occur within: & tbody, thead \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & \(\begin{array}{ll}\text { rowsep } & \text { Optional (values } \\ & \text { limited to: false, true) }\end{array}\) \\
\hline & script Optional \\
\hline & \begin{tabular}{ll} 
valign & Optional (values \\
& limited to: bottom, \\
& middle, top)
\end{tabular} \\
\hline Description and Usage: & A formatting element that contains one or more <entry > elements in a table. By convention, a rule specified by @rowsep prints or displays below the row. Vertical rules are specified by @colsep in <table> or one of its column-related descendant elements; external rules are specified by @frame available on \(<\) table \(>\). \\
\hline Availability: & Within <tbody> and < thead>, required, repeatable \\
\hline
\end{tabular}

\section*{Example:}
```

<table frame="all" colsep="true" rowsep="true">
    <head>Dates of Existence for Local
    Chapters</head>
    <tgroup align="center" cols="3">
        <colspec colname="chaptertitle"
        colnum="1"/>
        <colspec colname="yearformed" colnum="2"/>

\section*{< Sponsor > Sponsor (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & An optional child element of <titlestmt> for providing the name of an institution or individual who contributed significant support, monetary or otherwise, to the processing of the materials being described. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & titlestmt \\
\hline \multirow[t]{7}{*}{Attributes:} & altrender Optional \\
\hline & \begin{tabular}{ll} 
audience & Optional (values \\
limited to: external, \\
internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Attribute usage: & Use @localtype if local practice requires recording the type of sponsor. \\
\hline Description and Usage: & <sponsor> may be used to identify institution(s) and individual(s) who endorsed, financed, or arranged the acquisition, appraisal, and processing of the described materials or the preparation and distribution of the finding aid. \\
\hline Availability: & Optional, repeatable \\
\hline See also: & Do not confuse with <author>, which is for identifying the persons or institutions responsible for the intellectual content of the finding aid, or with \(<\) repository >, which is used to identify the institution or corporate body providing intellectual access to the described materials. \\
\hline References: & MARC 536 \\
\hline
\end{tabular}

\section*{Example:}
```

<titlestmt>
    <titleproper encodinganalog="245$a">The
    Edgar Holden Papers, 1978-1993</titleproper>
    <subtitle encodinganalog="245$b">A Guide
    to the Holden Papers at the University of
    Ishtaba</subtitle>
    <author>Finding aid prepared by Avery
    Thimble</author>
    <sponsor>Processing sponsored by grant
    funding from the National Historical
    Publications and Records Commission, grant
    number 94-0123</sponsor>
</titlestmt>
```

\section*{< subject \(>\) Subject (Table of Contents)}
\begin{tabular}{lll} 
Summary: & \begin{tabular}{l} 
An element for encoding topics represented in the \\
materials being described.
\end{tabular} \\
May contain: & part \\
May occur within: & \begin{tabular}{l} 
abstract, archref, bibref, controlaccess, entry, event, \\
indexentry, item, namegrp, p, physfacet, ref, unittitle
\end{tabular} \\
Attributes: & altrender & Optional \\
audience & Optional (values \\
& & limited to: external, \\
& internal) \\
& encodinganalog & Optional \\
id & Optional \\
& identifier & Optional \\
& lang & Optional \\
& localtype & Optional \\
& normal & Optional \\
relator & Optional \\
rules & Optional \\
script & Optional \\
source & Optional
\end{tabular}

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the subject in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local practice requires specification of the type of subject.

Use @normal to identify a standardized form of the subject if not provided in the element itself.

Use @relator to specify, either as a URI or a string, other relationship(s) the subject has to the described materials. The schema does not limit possible values of @relator, but an institution could define and enforce values elsewhere if desired.

Description and
Usage:

\section*{Availability:}

See also:

References:

\section*{Examples:}

Indicates a topic reflected in the described materials.
<subject> must contain one or more < part> elements. A single < part > may be used for the entire string, or if more granularity is desired, multiple <part> elements may be used to capture each component of the subject term, e.g.,

Part 1: Boats
Part 2: California
Part 3: 20th Century
Use < subject> within < controlaccess> for encoding subjects as defined by controlled vocabularies or according to appropriate rules. You may also use <subject> for encoding subjects as they appear within text.

Within <indexentry > : Optional, not repeatable Within all other elements: Optional, repeatable Personal, corporate, family and geographic names used as subjects are tagged as <persname>, <corpname>, \(<\) famname \(>\), and \(<\) geogname \(>\) respectively. The term "subject" can be used as the value of @relator when indicating a personal name, corporate name, family, or geographic name is a subject of the materials being described.

MARC 650, 69X
MODS < topic >
<controlaccess>
<subject encodinganalog="650" rules="RDA" source="lcsh"> <part>Indians of North America</part> <part>Idaho</part>
</subject>
<subject encodinganalog="650" rules="RDA" source="lcsh">
<part>Railroads</part>
<part>Washington (State)</part>
<part>History</part> </subject>
</controlaccess>
```

<controlaccess>
    <subject>
        <part>Alien and Sedition laws, 1798</part>
    </subject>
    <subject>
        <part>American Confederate voluntary
        exiles</part>
    </subject>
    <subject>
        <part>Kentucky and Virginia resolutions of
        1798</part>
    </subject>

\(<\) subtitle \(>\) Subtitle (Table of Contents)
\begin{tabular}{|c|c|}
\hline Summary: & A child element of <titlestmt > that captures a secondary or subsidiary portion of the title of the EAD instance. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & titlestmt \\
\hline \multirow[t]{7}{*}{Attributes:} & altrender Optional \\
\hline & \begin{tabular}{ll} 
audience & Optional (values \\
limited to: external, \\
internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Description and Usage: & Use < subtitle> to record a portion of the title of an encoded finding aid that is subordinate to the main title recorded in <titleproper>. <subtitle> is available only within <titlessmt> and is intended to support additional title information. \\
\hline Availability: & Optional, repeatable \\
\hline See also: & Do not confuse with \(<\) title \(>\). Subtitles of monographs, serials, paintings, and other such works mentioned in the finding aid are not separately encoded, but they may be listed as < part> within <title>. \\
\hline \multirow[t]{9}{*}{Example:} & ```
<filedesc>
    <titlestmt>
``` \\
\hline & <titleproper>Tom Stoppard</titleproper> <subtitle>An Inventory of His Papers \\
\hline & at the Harry Ransom Humanities Research Center</subtitle> \\
\hline & <author>Finding aid written by Katherine Mosley</author> \\
\hline & </titlestmt> \\
\hline & <publicationstmt>
<publisher>The University of Texas at \\
\hline & <publisher>The University of Texas at Austin, Harry Ransom Humanities Research \\
\hline & Center</publisher>
<date>2000</date> \\
\hline & </publicationstmt> \\
\hline
\end{tabular}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element for formatting information in a row and column display. \\
\hline May contain: & head, tgroup \\
\hline May occur within: & accessrestrict, accruals, acqinfo, altformavail, appraisal, arrangement, bibliography, bioghist, blockquote, controlaccess, controlnote, custodhist, dsc, fileplan, footnote, index, legalstatus, odd, originalsloc, otherfindaid, phystech, prefercite, processinfo, relatedmaterial, scopecontent, separatedmaterial, userestrict \\
\hline \multirow[t]{6}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & \begin{tabular}{l}
colsep \\
frame \\
Optional (values limited to: all, bottom, none, sides, top, topbot)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & \begin{tabular}{ll} 
pgwide & Optional (values \\
limited to: false, true)
\end{tabular} \\
\hline & \begin{tabular}{l}
rowsep \\
script \\
Optional
\end{tabular} \\
\hline \multirow[t]{4}{*}{Attribute usage:} & Use @colsep to indicate if the columns in the table are to be separated by vertical rules. \\
\hline & Use @frame to indicate if there are rules surrounding the table. \\
\hline & Use @pgwide to indicate if the table is the width of the page or of the text column. \\
\hline & Use @rowsep to indicate if the rows in the table are to be separated by horizontal rules. \\
\hline Description and & The application of \(<\) table \(>\) is based on the XML \\
\hline Usage: & Exchange Table Model, an XML expression of the Exchange subset of the full CALS table model DTD. \\
\hline
\end{tabular}
```

Availability:
Optional, repeatable
Example:

    </tgroup>
</table>
```

\section*{\(<\) title \(>\) Title (Table of Contents)}

Summary: An element for encoding the formal name of a work.

May contain:
May occur within:

Attributes:

Attribute usage: Use @encodinganalog to indicate corresponding data elements in another data format, such as MARC.

Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the title in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.

Use @localtype, if local practice requires specification of the type of title.

Use @normal to identify a standardized form of the title if not provided in the element itself.

Use @relator to specify, either as a URI or a string, the relationship between the title and the materials being described. The schema does not limit possible values of @relator, but an institution could define and enforce values elsewhere if desired.

Use @render to indicate how the title should be displayed. Options are limited to altrender, bold, bolddoublequote, bolditalic, boldsinglequote, boldsmcaps, boldunderline, doublequote, italic, nonproport, singlequote, smcaps, sub, super, and underline.

Use @rules to specify the descriptive rules followed for forming the title statement.

Use @source to indicate the vocabulary from which the title statement has been taken.

\section*{Description and Usage:}

Availability:

See also:

The name of an intellectual work, such as a monograph, serial, or painting, listed in a finding aid. Within <controlaccess > , the formal, authorized name should be used, but <title> may also be used to encode titles as they appear within other elements to enable formatting such as italics or quotations.
Subtitles of such works are not separately encoded but may instead be listed as part of \(\langle\) title \(\rangle\), either along with the title in a single <part>, or in multiple parts as follows:

Part 1: Private eyeballs
Part 2: A golden history of bad taste
Within <indexentry>: Optional, not repeatable
Within all other elements: Optional, repeatable
Do not confuse with <titleproper>, which is used for the title of the encoded finding aid.

Do not confuse with < unittitle>, which is used to encode the name of the described materials, such as the title of a collection, record group, fonds, series, file, or item. <title> may be a child of <unittitle>, and it is possible that <unittitle> may contain no text other than that which is further specified by \(\langle\) title \(>\).

Do not confuse with @linktitle, which is found in linking elements.

References:

\section*{Examples:}

MARC 630, 730, 740
MODS < subject> <titleInfo>
<c01>
<did>
<unittitle>Short stories, </unittitle> <unitdate>1946-1954</unitdate> </did> <c02> <did> <unittitle> <title render="italic"> <part>The Lottery</part> </title> </unittitle> </did> </c02>
    </c01>
    <bibref>
        <title render="italic">
            <part>Library of Congress Acquisitions:

        </title>
    , p. 29. </bibref>

\section*{<titleproper> Title Proper of the Finding Aid}
(Table of Contents)

Attribute usage: Use @localtype if local practice requires recording the type of title.

Use @render to specify formatting of <titleproper> for display and print purposes.

Description and
Usage:
Availability:

See also:
Use <titleproper> to record the title of a finding aid or finding aid series.
Within <seriesstmt>: Required, not repeatable
Within <titlestmt>: Required, repeatable
Do not confuse with <title>, which is used to encode the formal names of works such as monographs, serials, paintings, etc., mentioned in the finding aid.

Do not confuse with < unittitle>, which identifies the name of the described materials.

\section*{Examples:}
```

<titlestmt>
    <titleproper> The Edgar Holden Papers,
    1978-1993 </titleproper>
    <subtitle>A Guide to the Holden Papers at
    the University of Ishtaba</subtitle>
    <author>Finding aid prepared by Avery
    Thimble</author>
    <sponsor>Processing sponsored by grant
    funding from the National Historical
    Publications and Records Commission, grant
    number 94-0123</sponsor>
</titlestmt>
<titlestmt>
    <titleproper> Catalogue of the Papers of
    James Graham Ballard </titleproper>
</titlestmt>
<titlestmt>
    <titleproper localtype="formal"> Guide
    to the Abraham Hayward Collection
    </titleproper>
    <titleproper localtype="filing"
    render="altrender" altrender="nodisplay"
    audience="internal"> Hayward (Abraham)
    Collection </titleproper>
    <author>by Michael Rush</author>
</titlestmt>
```

\section*{<titlestmt> Title Statement (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A required child element of <filedesc > that binds together information about the name of an encoded finding aid and those responsible for its content. \\
\hline May contain: & author, sponsor, subtitle, titleproper \\
\hline May occur within: & filedesc \\
\hline \multirow[t]{5}{*}{Attributes:} & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline \multirow[t]{5}{*}{Description and Usage:} & Use < titlestmt> to bind together elements containing bibliographic information about a finding aid, including its title and the names and roles of those responsible for the finding aid's intellectual content. The prescribed order of all child elements (both required and optional) is: \\
\hline & <titleproper> \\
\hline & < subtitle> \\
\hline & <author> \\
\hline & <sponsor \(>\) \\
\hline Availability: & Required, not repeatable \\
\hline \multirow[t]{2}{*}{See also:} & Do not confuse with <title>, which is used to encode the formal names of works such as monographs, serials, paintings, etc., mentioned in the finding aid. \\
\hline & Do not confuse with < unittitle>, which identifies the name of the described materials. \\
\hline
\end{tabular}

\section*{Examples:}
```

<titlestmt>
    <titleproper>The Edgar Holden Papers,
    1978-1993</titleproper>
    <subtitle>A Guide to the Holden Papers at
    the University of Ishtaba</subtitle>

```
\begin{tabular}{|c|c|}
\hline \(<\) todate \(>\) T & Date (Table of Contents) \\
\hline Summary: & A child element of \(<\) daterange \(>\) that records the end point in a range of dates. \\
\hline May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
\hline May occur within: & daterange \\
\hline Attributes: & \begin{tabular}{ll} 
altrender & Optional \\
audience & Optional (values \\
& limited to: external, \\
& internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & notafter Optional \\
\hline & notbefore Optional \\
\hline & script Optional \\
\hline & standarddate Optional \\
\hline Attribute usage: & Use @localtype to supply a more specific characterization of the date range. \\
\hline & Use @notafter and @notbefore to capture the earliest and latest possible dates in machine-processable form in cases when the date is uncertain. \\
\hline & Use @standarddate to provide a machine-processable form of the date. \\
\hline Description and Usage: & Use \(<\) todate \(>\) to record the end date in a range of dates, whether they be known or approximate. The content of the element is intended to be a humanreadable, natural language expression of the date. If, however, indexing or other machine process of dates is desired, the @standarddate should be used to record the date in machine-processable form as well. \(<\) todate \(>\) may be omitted from <daterange \(>\) if the date span is ongoing. \\
\hline Availability: & Optional, not repeatable \\
\hline See also: & Use \(<\) fromdate \(>\) to record the starting point of a date range. \\
\hline
\end{tabular}

\section*{Examples:}
```

\section*{\(<\) unitid > ID of the Unit (Table of Contents)}
\begin{tabular}{lll} 
Summary: & \begin{tabular}{l} 
A child element of <did> that provides an identifier \\
for the materials being described, such as an accession \\
number.
\end{tabular} \\
May contain: & [text], abbr, emph, expan, foreign, lb, ptr, ref \\
May occur within: & did & \\
Attributes: & altrender & Optional \\
& audience & Optional (values \\
& limited to: external, \\
& countrycode & internal) \\
encodinganalog & Optional \\
id & Optional \\
& identifier & Optional \\
& label & Optional \\
lang & Optional \\
localtype & Optional \\
repositorycode & Optional \\
script & Optional
\end{tabular}

Attribute usage: Although not required, the @countrycode and @repositorycode should be used in <unitid> at the \(<\) archdesc \(>/<\operatorname{did}>\) level to comply with ISAD(G) element 3.1.1.

Description and
Usage: Usage:
<unitid> may contain any alpha-numeric text string that serves as a unique reference point or control number for the described material, such as a lot number, an accession number, a classification number, or an entry number in a bibliography or catalog. <unitid> is primarily a logical designation, which sometimes indirectly provides location information, as in the case of a classification number.

\section*{Availability: Optional, repeatable}

See also:
Use < container> and <physloc> to designate the physical housing or location of the described materials.

Do not confuse with < recordid> or <otherrecordid>, which are identifiers for the finding aid itself, not the materials described therein.

<unittype> Unit Type (Table of Contents)
Summary: \(\quad\) A child element of \(<\) physdescstructured \(>\) that indicates the type of unit being quantified, e.g., boxes, linear feet, etc.
May contain: [text]
May occur within: physdescstructured
Attributes:
\begin{tabular}{ll} 
altrender & Optional \\
audience & \begin{tabular}{l} 
Optional \\
limited to \\
internal)
\end{tabular} \\
& Optional \\
encodinganalog & Optional \\
id & Optional \\
identifier & Optional \\
lang & Optional \\
rules & Optional \\
script & Optional
\end{tabular}
Attribute usage: Use @identifier to provide a number, code, or string (e.g., URI) that uniquely identifies the unit type in a controlled vocabulary, taxonomy, ontology, or other knowledge organization system. Do not confuse with @id, which provides a unique id for the element within the XML instance.
Use @rules to specify the descriptive rules followed for forming the unit type.
Description and
Usage:
Availability:
Examples:
Required in < physdescstructured>, <unittype> identifies the type of unit being quantified.

\section*{Appendix :}

\section*{Appendix B : Deprecated and Obsolete Elements and Attributes}

The revision of EAD 1.0 to EAD 2002 established a precedent that elements to be removed from EAD would first be deprecated - suppressed but available if necessary - before being removed from subsequent versions. All elements deprecated in EAD 2002 were removed from EAD3. Elements present in the DTD version of EAD 2002 but removed from the schema versions of EAD 2002 (<archdescgrp>, <dscgrp>, and <eadgrp> ) were also removed from EAD3.
The Society of American Archivists' Technical Subcommittee on EAD (TS-EAD) endeavored to honor the commitment to deprecate removed elements.However, the extent of the changes in EAD3 made comprehensive deprecation impossible. Elements to be removed entirely from the standard remain available in undeprecated versions of EAD3. Elements that were replaced by other elements offering commensurate functionality, or whose availability within the standard changed are in most cases not supported in undeprecated EAD3.
The following attributes and elements are not available in the default versions of EAD3 (ead3.rng, ead3.xsd, and ead3.dtd), but are available in the undeprecated versions (ead3_undeprecated.rng, ead3_undeprecated.xsd, and ead3_undeprecated.dtd). Definitions for these attributes and elements follow below.

\section*{Deprecated Attributes}
@placement @tpattern

\section*{Deprecated Elements}
<bibseries> <descgrp> <div> <extent> <frontmatter> <imprint>
<runner> < titlepage>
In addition to including the attributes and elements listed above, the undeprecated versions of EAD3 also include the full EAD 2002 content models for the <physdesc> and <unittitle> elements. The undeprecated \(<\) physdesc> includes <extent>, <dimensions>, <physfacet>, and the access point elements (e.g. <genreform >) whereas the default \(<\) physdesc> in EAD3 does not. The undeprecated <unittitle> includes \(<\) bibseries \(>\), <imprint>, <edition>, and <unitdate>, whereas the default \(<\) unittitle> in EAD3 does not.
Style sheets for migrating EAD 2002 to EAD3 will include an option to preserve deprecated elements. However, when future versions of EAD are released, support for elements and attributes deprecated in EAD3 will be removed and their forward migration will not be supported.

The following obsolete attributes and elements were removed entirely in EAD3. Their semantics or functionality were replaced by new attributes or elements.

\section*{Obsolete Attributes}
@authfilenumber @continuation @findaidstatus @from / @xlink:from @linktype / @xlink:type @mainagencycode @othertype @publicid @role / @xlink:role @to / @xlink:to @type @urn @url

\section*{Obsolete Elements}
<arc> <change> <creation> <daodesc> <daogrp> <daoloc>
<descrules> <eadheader> <eadid> <eventgrp> <extptr> <extptrloc>
<extref> <extrefloc> <langusage> <linkgrp> <note> <ptrloc>
\(<\) refloc> <resource> <revisiondesc> <subarea>

\section*{Deprecated Attributes}

\section*{@placement (Table of Contents)}
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
The location where the information in the \(<\) runner \(>\) \\
element is displayed in print (foot or head) or as a \\
digital watermark (background).
\end{tabular} \\
Values: & \begin{tabular}{l} 
background, footer, header
\end{tabular}
\end{tabular}

\section*{@tpattern (Table of Contents)}

Summary: A reference to a pattern that defines the specifications of particular HTML output tables. Available in \(\langle\mathrm{c}\rangle\), \(<\mathrm{c} 01>-<\mathrm{c} 12>\), and \(<\mathrm{dsc}>\).

Data Type: NMTOKEN
Deprecated Elements

\section*{<bibseries > Bibliographic Series (Table of Contents)}
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
An element for identifying information about the \\
published series in which a book finding aid, or other \\
published work appeared. Refers to monographic series \\
only.
\end{tabular} \\
Description and & \begin{tabular}{l} 
An element for encoding information about the \\
published series in which a book, encoded finding \\
aid, or other published work has appeared. Refers to \\
monographic series only. Not to be used for archival \\
series.
\end{tabular} \\
[text], emph, lb, num, ptr, ref, title
\end{tabular}
\begin{tabular}{|c|c|}
\hline < descgrp> & Description Group (Table of Contents) \\
\hline Summary: & An element for grouping together any number of elements that are following siblings of the \(<\) did \(>\) element. \\
\hline Description and Usage: & An element for grouping together any number of elements that are following siblings of the \(<\) did \(>\) element except for the <dsc> element. < descgrp> might be used, for example, to cluster elements into groups that correspond to the areas specified by the General International Standard Archival Description (ISAD(G)). \\
\hline May contain: & accessrestrict, accruals, acqinfo, altformavail, appraisal, arrangement, bibliography, bioghist, blockquote, chronlist, controlaccess, custodhist, descgrp, fileplan, head, index, legalstatus, list, odd, originalsloc, otherfindaid, p, phystech, prefercite, processinfo, relatedmaterial, relations, scopecontent, separatedmaterial, table, userestrict \\
\hline May occur within: & archdesc, c, c01, c02, c03, c04, c05, c06, c07, c08, c09, c10, c11, c12, descgrp \\
\hline \multirow[t]{7}{*}{Attributes:} & altrender Optional \\
\hline & audience \(\quad\)\begin{tabular}{l} 
Optional (values limited to: \\
external, internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & localtype Optional \\
\hline & script Optional \\
\hline Availability: & Optional, repeatable \\
\hline
\end{tabular}
\begin{tabular}{|c|c|}
\hline Summary: & A generic element that designates a major section of text within \(<\) frontmatter \(>\). \\
\hline Description and Usage: & A generic element that designates a major section of text within \(<\) frontmatter \(>\). Examples of these text divisions include a title page, preface, acknowledgments, or instructions for using a finding aid. Use the \(<\) head \(>\) element to identify the div's purpose. \\
\hline May contain: & blockquote, chronlist, div, head, list, p, table \\
\hline May occur within: & div, frontmatter \\
\hline \multirow[t]{5}{*}{Attributes:} & altrender Optional \\
\hline & audience \(\quad\)\begin{tabular}{l} 
Optional (values limited to: \\

\hline & script Optional \\
\hline Availability: & Optional, repeatable \\
\hline
\end{tabular}
<extent \(>\) Extent (Table of Contents)

\section*{\(<\) frontmatter \(>\) Front Matter (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & A wrapper element that bundles prefatory text found before the start of <archdesc>. \\
\hline Description and Usage: & A wrapper element that bundles prefatory text found before the start of <archdesc \(>\). It focuses on the creation, publication, or use of the finding aid rather than information about the materials being described. Examples include a title page, preface, dedication, and instructions for using a finding aid. The optional <titlepage> element within <frontmatter> can be used to repeat selected information from \(<\) control \(>\) to generate a title page that follows local preferences for sequencing information. The other <frontmatter> structures, such as a dedication, are encoded as Text Divisions < div>s, with a <head> element containing word(s) that identify the nature of the text. \\
\hline May contain: & div, titlepage \\
\hline May occur within: & ead \\
\hline \multirow[t]{5}{*}{Attributes:} & altrender Optional \\
\hline & audience \(\quad\)\begin{tabular}{l} 
Optional (values limited to: \\
external, internal)
\end{tabular} \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Availability: & Optional, non repeatable \\
\hline
\end{tabular}

\section*{<imprint> Imprint (Table of Contents)}
\begin{tabular}{|c|c|}
\hline Summary: & An element for encoding information relating to the publication or distribution of a work cited in a <bibref> or <unittitle>. \\
\hline Description and Usage: & An element for encoding information relating to the publication or distribution of a work cited in a < bibref > or <unittitle>. In both elements the place of publication, name of the publisher, and date of publication can be encoded as either plain text or wrapped in the <imprint> subelements \(<\) geogname \(>\), < publisher \(>\), and \(<\) date \(>\). It is seldom, if ever, appropriate to use <imprint> in a citation for an unpublished work cited in a \(<\) bibref \(>\). \\
\hline May contain: & [text], date, emph, geogname, lb, ptr, publisher \\
\hline May occur within: & bibref, unittitle \\
\hline \multirow[t]{6}{*}{Attributes:} & altrender Optional \\
\hline & audience \(\quad\)\begin{tabular}{l} 
Optional (values limited to: \\
external, internal)
\end{tabular} \\
\hline & encodinganalog Optional \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Availability: & Optional, repeatable \\
\hline
\end{tabular}

\section*{<physdesc> Physical Description [Deprecated} Data Model] (Table of Contents)
\begin{tabular}{|c|c|}
\hline Summary: & A child element of \(<\) did \(>\) that provides a statement about the physical characteristics of the material being described. \\
\hline Description and Usage: & <physdesc> is a wrapper element for bundling information about the appearance or construction of the described materials, such as their dimensions, a count of their quantity or statement about the space they occupy, and terms describing their genre, form, or function, as well as any other aspects of their appearance, such as color, substance, style, and technique or method of creation. The information may be presented as plain text, or it may be divided into the <dimensions>, <extent>, <genreform > , and \(<\) physfacet> subelements. \\
\hline May contain: & [text], abbr, corpname, date, dimensions, emph, expan, extent, famname, footnote, foreign, function, genreform, geogname, lb, name, num, occupation, persname, physfacet, ptr, quote, ref, subject, title \\
\hline May occur within: & did \\
\hline \multirow[t]{8}{*}{Attributes:} & altrender Optional \\

\section*{<runner > Runner (Table of Contents)}
\begin{tabular}{ll} 
Summary: & \begin{tabular}{l} 
An optional formatting element that provides for a \\
header, footer, or watermark to appear on every page \\
of a printed finding aid or throughout an electronic \\
version.
\end{tabular} \\
Description and & \begin{tabular}{l} 
An optional formatting element that provides for \\
a header, footer, or watermark to appear on every \\
page of a printed finding aid or throughout an \\
electronic version. If a transparent image is desired as \\
background, use < ptr > instead. The < runner > is \\
available within < archdesc > and must appear before
\end{tabular} \\
the <did \(>\)
\end{tabular}
\begin{tabular}{|c|c|}
\hline \(<\) titlepage \(>\) & Title Page (Table of Contents) \\
\hline Summary: & A wrapper element within <frontmatter> that groups bibliographic information about a finding aid, including its name, author, and other aspects of its creation and publication. \\
\hline Description and Usage: & A wrapper element within <frontmatter> that groups bibliographic information about a finding aid, including its name, author, and other aspects of its creation and publication. It contains much of the same information found in the <filedesc> portion of \(<\) control \(>\), such as the \(<\) titleproper \(>\), \(<\) subtitle>, <author>, <sponsor>, <publisher>, and \(<\) date \(>\) of the finding aid. Although it is possible to generate an electronic or printed title page directly from <control>, use of the <titlepage> may be more accommodating of local preferences, including displays of photographic illustrations, institutional logos, or other graphic images. \\
\hline May contain: & author, bibseries, blockquote, chronlist, date, edition, list, num, p, publisher, sponsor, subtitle, table, titleproper \\
\hline May occur within: & frontmatter \\
\hline \multirow[t]{5}{*}{Attributes:} & altrender Optional \\

Optional (values limited to: \\
external, internal)
\end{tabular} external, internal) \\
\hline & id Optional \\
\hline & lang Optional \\
\hline & script Optional \\
\hline Availability: & Optional, non repeatable \\
\hline
\end{tabular}

\section*{Appendix :}

\section*{Appendix C: Revision History}

\section*{EAD3 1.1.2 (2023 June)}
1. Updated external controlled vocabularies.
2. Updated example for @linkrole to match URI expectations.
3. Fixed values for @parallel.

\section*{EAD3 1.1.1 (2019 December)}
1. The foreign element is now a valid child of the ref element.
2. The c12 element is now valid in the XSD schemas.
3. The objectxmlwrap element cannot have descendants in the EAD3 namespace in the XSD schemas.

\section*{EAD3 1.1.0 (2018 April)}
1. The @render attribute can now be used with the quote element.
2. The objectxmlwrap element can now be validated properly in the XSD schemas.
3. Manually fixed a bug that was causing the descgrp element not to validate correctly in the undeprecated DTD.
4. The date element is now a valid child of the part element.
5. rightsdeclaration, a new element, has been added to the control section.
6. The @localtype attribute can now be used with the conventiondeclaration element.
7. The datatype associated with the @containerid attribute has been relaxed to xsd:string (in EAD3 version 1.0, the datatype for this attribute was restricted to xsd:NMTOKEN).

\section*{EAD3 1.0.0 (2015 July)}
1. Initial release.```
